FULL SPECTRUM OF

NEC PUTS IT ALL TOGETHER... CMOS MICROPROCESSORS, SINGLE-CHIP MICROCOMPUTERS, AND ADVANCED PERIPHERALS.

The most advanced user-oriented product line in the industry. One designed with the variables necessary to give you a choice.

Advanced CMOS Microprocessors

NEC's new V-Series advanced CMOS microprocessors puts a system on a chip. The V20 and V30 starts it off by giving you 101 instructions and all the advantages of CMOS. They're everything the 8088/8086 should have been.

The V40 and V50 takes the series to the next level. A system on a chip. The on-board peripherals allow you to reduce the external components while improving overall system efficiency.

Single-Chip Microcomputers

NEC offers the most comprehensive line of 4- and 8-bit single-chip microcomputers in the industry. Now you have a choice. Design your next system with the device suited to your application. Don't try to fit your design around a single device.

The next generation of 16-bit single-chip microcomputers is here. The first of the series, the μPD78310 and μPD78312, are now available with newer devices on the way.

Advanced Complex Peripherals

NEC's full range of complex peripherals gives you five ways to simplify your design. The devices may be complex, but their end result simplifies your system. Replace numerous inefficient components or even whole circuit boards.

Call Toll Free Today.

For more information on NEC's advanced product offering, call us at **1-800-632-3531.** In California: **1-800-632-3532.**

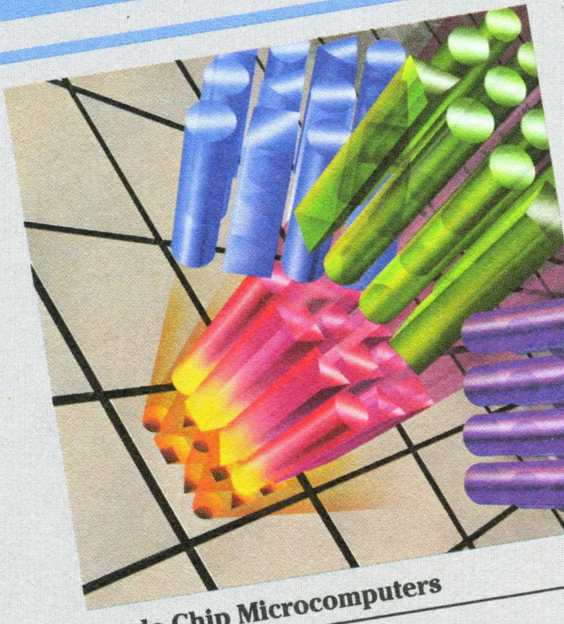
V-Series CMOS Microprocessors

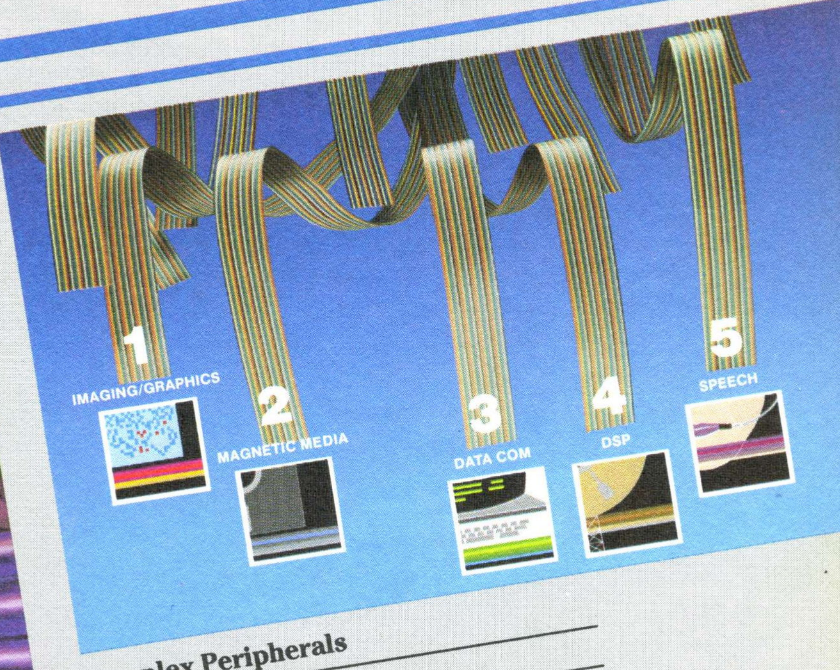
Device	Description
μPD70108	16-bit high-performance CMOS microprocessor
μPD70116	16-bit high-performance CMOS microprocessor
μPD70208	16-bit high-integration CMOS microprocessor
μPD70216	16-bit high-integration CMOS microprocessor

MICROCOMPUTER PRODUCTS



Single-Chip Microcomputers

Family	Description
7500 Series	4-bit single-chip microcomputers 33 different types
75000 Series	4-bit single-chip microcomputers 3 now and more to come
7800 Series	8-bit single-chip microcomputers 17 different types
78000 Series	16-bit single-chip microcomputers 2 now and more to come



Complex Peripherals

Device	Description
1. Graphics/Imaging	
µPD7281	Image Pipelined Processor (IMPP)
µPD9305	MAGIC (Interface for IMPP)
µPD7220A	Graphic Display Controller (HGDC)
2. Magnetic Media	
µPD765A	Floppy Disk Controller
µPD9201	Floppy Disk Interface
µPD7261A	Hard Disk Controller
µPD9306	Hard Disk Interface
3. Data Communications	
µPD7210	GPIB/Talker, Listener, Controller
µPD7201A	Multiprotocol Serial Controller
4. Digital Signal Processing	
µPD7720	General Purpose Digital Signal Processor
µPD77P20	EPROM version of 7720
5. Speech	
µPD7730	ADPCM speech encoder/decoder
µPD7756/59	ADPCM phoneme speech synthesizer
	Speech recognition 3-chip set

A FAST COURSE IN APPLIED LOGIC.

FAST™ Applications Handbook
FAIRCHILD
A Schlumberger Company

Complex problems often require FAST™ answers.

And you'll find those answers in our new 1985 FAST Applications Handbook. Over 250 pages of solutions to system problems that help you design faster than ever before. And it's yours for the asking.

The FAST Applications Handbook guides you function by function through actual implementation of high speed circuit logic designs. Also included is a complete cross reference guide by function. And a complete listing of Fairchild authorized distributors and worldwide sales offices. Which makes if even easier to order more FAST parts or additional information.

For your free copy, just call The Fairchild Information Center at 1-800-554-4443. Or write Fairchild Digital Unit, 333 Western Avenue, South Portland, ME 04106.

You won't find a faster, more logical tool anywhere. FAST® And you certainly can't beat the price.

FAST (Fairchild Advanced Schottky TTL) is a trademark and the FAST logo is a registered trademark of Fairchild Semiconductor Corporation. © 1985 Fairchild Semiconductor Corporation.

We're taking the high ground.

A Hearst Business Publication

NEW Design Assistance You Can't Buy Anywhere Else!

The 1986 IC Master features its most significant editorial expansions, in design assistance, since its inception in 1975. This expansion directly impacts . . . **CAE/CAD technology** . . . **Custom/Semicustom** product selection . . . and **Surface Mount Device** selection.

The 1986 IC Master provides a unique system containing information that permits you to **select** the **best Custom/Semicustom chip** . . . the **best chip manufacturer** . . . and the **best electronic design tools** for a particular application-specific design. And, if you're looking for Surface Mount Devices, the IC Master permits you to easily select the appropriate device for your application from our listing of over **10,000** devices.

DESIGN AUTOMATION

Virtually **all** Custom/Semicustom IC Devices are cross referenced with **all** compatible Design Automation tools. **System profiles** are listed including both hardware (workstations, etc.) and software tools available from IC and CAE/CAD manufacturers. You can readily compare the various software tools and quickly determine their compatibility with computing hardware. An industry-wide product listing provides an extremely valuable perspective on the CAE/CAD options available to the market.

CUSTOM/SEMICUSTOM

This **newly-expanded** section provides a listing of software design tools available for Programmable Logic Devices, Gate Arrays, Standard Cells, and Linear and Linear/Digital Arrays. In addition, major macros in VLSI/LSI Macrocell Libraries are listed by source.

SURFACE MOUNT DEVICES

The **new** selection guide provides a listing of over 10,000 devices that are available by type number, package, and manufacturer. These listings direct you to manufacturers' data sheets within this section or in any of the other Master Selection Guide sections in which the appropriate data sheet might appear.

IN ADDITION . . .

You'll find **new** subsections within the traditional Master Selection guides covering Digital Signal Processors, Memory Drivers and Peripheral Drivers. All product data is grouped by application and organized and listed by type, function and key specifications in a unique editorial format that leads you to specific product information fast . . . from basic part numbers to full manufacturer's Product Data Sheets.

Selecting ICs and design aids using the IC Master is **thorough, quick** and **easy** and is guaranteed to save you valuable research hours in locating ICs, related products and manufacturers. Whatever your application needs are, **Design Automation, Custom/Semicustom, SMD, Digital, Linear, Interface, Memory** and **Military ICs, Microprocessors, MPU Development Systems, Microcomputer Boards,** your design assistance is contained in one source . . . the 1986 IC Master.

IMPORTANT FEATURES OF YOUR IC MASTER

ONE COMPLETE SOURCE . . .

The IC MASTER is the original and only complete guide to currently available integrated circuits, microcomputer boards, development systems, gate arrays, design automation software and hardware, custom/semicustom ICs and design tools, surface mount packages, and other related components of concern to the design engineer. It has become the first place to look in the critical selection of ICs, boards, systems and equipment. If only one device can fit the requirements of a new design or if hundreds are available, the user can find out in seconds by referring to the IC MASTER.

EASY TO USE . . .

THE IC MASTER and quarterly supplemental IC UPDATES save time. No longer does the user have to spend long, tedious hours and days searching through manufacturers' catalogs and data sheets for information. The IC MASTER and IC UPDATES put at the user's fingertips an easy way to narrow his IC choices quickly, accurately, and systematically with the confidence that he has just surveyed the entire industry.

ADVERTISERS INDEX

Lists alphabetically by company and section the technical data provided by key companies. Use this index to find information on important products when appropriate suppliers are known.

PAGE 8

MASTER SELECTION GUIDE (Function) INDEX

Indexes functions, key words and topics leading to the *beginning* of the sections where these are found. Use this guide to find quickly not only specific products but also related devices, equipment and software.

PAGE 10

PART NUMBER INDEX

Covers the Master Selection Guide, Application Notes, and, in **Bold Face**, Manufacturer supplied Data pages. Arranged by base part numbers (ignoring letter prefixes and suffixes) so that generic and similarly numbered devices from different manufacturers, though not necessarily alternate sources, are grouped together. Entirely alphabetic titles and model names are placed at the beginning. Use this index to locate key operational characteristics, application notes and device data when you have a device number or model name. You can also use it to search for similar parts and to find related functions when you have the number of a device that approximates the function you require.

PAGE 51

PART NUMBER/ LOGO GUIDE

Describes each manufacturer's part number system and method of identifying products. It defines device number prefixes and suffixes as well as depicts logos. JAN nomenclature and PRO-ELECTRON numbers are covered. Use this guide to decode model numbers and to read device logos to identify the manufacturers.

PAGE 300

APPLICATION NOTE DIRECTORY

Provides a comprehensive guide to many IC and IC-related application notes. Organized by topics, with a topic index at the beginning of the section, so that information can be located quickly. If you wish to locate all application notes for a specific device number, refer to the Part Number Index which in turn will direct you to the applicable notes within this section.

PAGE 351

MILITARY PARTS DIRECTORY

Includes a table of manufacturers willing to perform MIL-STD-883 screening, two-way tables between military (slash) numbers and commercial devices, and a functional breakdown of devices on the QPL parts list. Manufacturer's data in this section provides supplemental information on military topics. Refer to this section when seeking military and military-related devices.

PAGE 501

MASTER SELECTION GUIDE— DIGITAL DEVICES

Provides information for making initial product selections. Digital devices are listed by major families (CMOS, ECL. GaAs, TTL) and within those families by functional groups (arithmetic, buffers, gates–AND, etc.) These listings lead to the additional, key-product, data pages provided by the manufacturers. Use these pages to find digital devices, complementary devices, and alternatives.

PAGE 801

MASTER SELECTION GUIDE— MICROPROCESSOR

Provides specific information on microprocessors, followed by microprocessor families, and then more generic microprocessor system peripherals. Use these pages supplemented by the data pages for system overviews and product selections.

PAGE 1401

MASTER SELECTION GUIDE— µP DEVELOPMENT SYSTEMS

Describes the tools used in developing software programs for microprocessors. Use these pages when seeking anything from simple, single-user systems to multi-user computers devoted to software development.

PAGE 1801

MASTER SELECTION GUIDE— MICROCOMPUTER BOARDS

Covers microcomputer boards followed by support boards. The material is grouped by the system buses. Use these pages when exploring µC board performance, looking for complementary boards, and to locate appropriate sources.

PAGE 2001

ALTERNATE SOURCE DIRECTORY

Provides an industry-wide cross reference of those devices which the manufacturers claim are pin-for-pin, functional equivalents to IC's made by other firms. Includes many alternates not implied by their model numbers, particularly linear and memory devices. Simply look up the manufacturer and device number to find various alternate sources. Use this directory whenever you need to determine multiple sources.

PAGE 2201

MANUFACTURERS AND DISTRIBUTORS DIRECTORY

Serves as a comprehensive telephone directory of the IC industry. Includes the manufacturer's addresses and international sales offices, reps and distributors. To support manufacturers' data pages it also includes domestic sales offices, representatives and distributors. Use this directory for establishing contact with the sales locations.

PAGE 2451

ADVERTISERS PRODUCT INDEX

Indexes both the general information and specific product data provided by the manufacturers placing detailed technical data in IC Master. Use these page references to lead to the Master Selection Guide entries, to application notes and particularly to the important product data (**Bold Face**).

PAGE 2601

THE 1986 IC MASTER

The Engineers

The whole world does indeed follow the IC MASTER when it comes to finding complete data concerning integrated circuits on the market today. This all-in-one-source saves you both time and money. There's no need for desperate group searches, or for hours of tedious examinations of various catalogs and data sheets.

This is your guide to using the IC MASTER. Typical problems have been posed to show you how simple it is to find all your IC answers—in one place!

Who makes a 16384x1 static RAM with an access time of 70ns or faster? And what are my technology choices?

First look up Memory, RAMs, Static, in the Master Selection Guide Function Index near the beginning of Volume I. This will lead you to the Memory section, which provides initial selection information and data on PROMs, RAMs, ROMs and other memory devices. More specifically it will lead you to the beginning of the Static RAM section, where you will find the devices listed by organization (word and bits/word) and within that, by access times.

Look up 16384x1 and 70ns. You will find that you can select NMOS, CMOS, or at significantly faster speeds, ECL. You will also find additional information on output type, supply voltage, and number of pins as well as manufacturers' part numbers and names. Thus it is a simple process to reduce your device choices to just a few based on key parameters.

Your next step would be to study the product selections from hundreds of pages of engineering data provided directly by the manufacturers. The bold face listings lead you to that data wherever it is in the Master.

See Volume II

Memory selection is easy with the IC Master.

My company is interested in microprocessors. Where do I start?

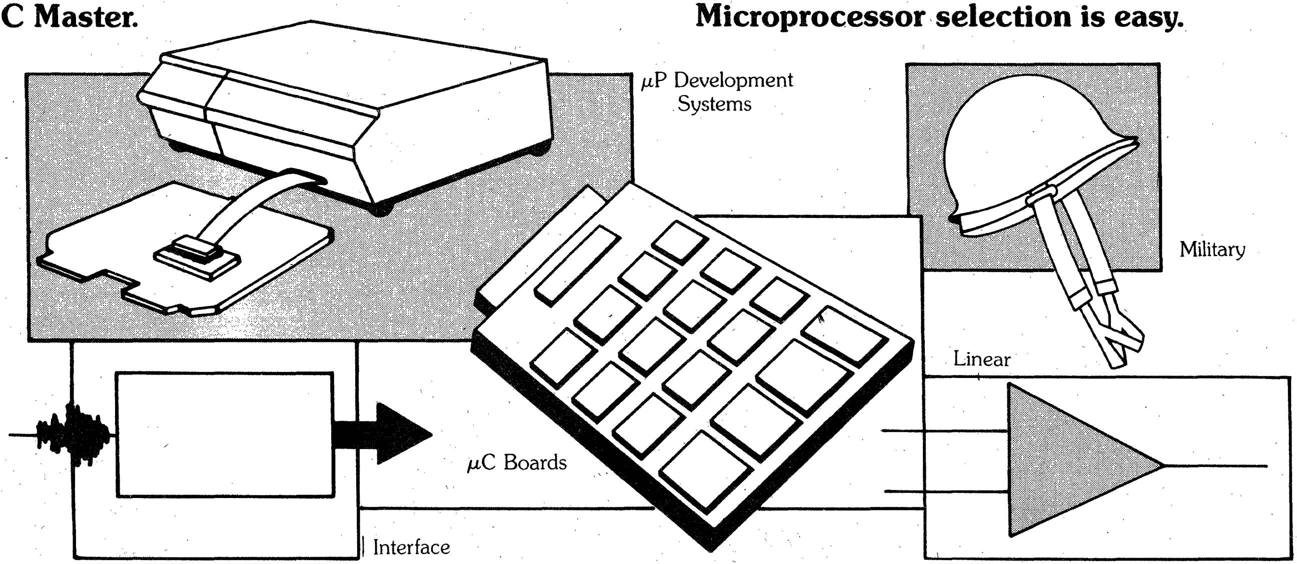
With IC Master in hand, just turn to the Master Selection Guide Function Index. There, under the heading Microprocessors, you will find several choices of CPUs, System Components, Peripheral Controllers and General Purpose Circuits, as well as CPU Boards. Assuming you want to review CPUs, turn to the page listed where you will find key parameters and be able to narrow down your selection to a range of products that will fulfill your major requirements.

Then you can turn to the Microprocessor System Components to find complementary devices and peripherals specifically designed to go with these CPUs. And you can turn to the Peripheral Controller and General Purpose circuits to find other related devices. An advantage of this system is that you can quickly find related components and features without knowing specific titles or even knowing exactly what words or functions to ask for.

Once you have made some preliminary choices, your next step will be to study these selections from the many pages of up-to-date engineering data provided directly by the manufacturers.

See Volume I

With IC MASTER, Microprocessor selection is easy.



First Step in IC Selection

Who makes a Dual, Low Offset Voltage OpAmp?

The Master Selection Guide-Linear covers linear ICs by product categories such as Amplifiers, Special Purpose; Operational Amplifiers; Timers; Voltage Regulators, etc. So you can simply look up Operational Amplifiers, Dual Units and find they are listed by offset voltage. Now you can define "low offset" based on what is available. Or maybe balance offset against bias current. As in other sections, when numeric parameters are important, you gain the flexibility to review trade-offs.

See Volume II

With IC MASTER, Linear selection is easy.

I need an IC that has Music capability, but I don't know which Master Selection Guide to turn to.

When there is any doubt as to which Master Selection Guide covers a particular type of device, the first place to look is in the extensive Master Selection Guide Function Index. This index serves as a cross reference between IC functions and the specific Master Selection Guide where devices performing these functions can be found.

For example, if you looked up MUSIC circuits in the Master Selection Guide Function Index you would be directed to several subheadings in the Consumer Circuits portions of the Master Selection Guide.

See Volume I

Identifying an IC by function is easy with the IC MASTER.

I want to use a digital gate array or some other semicustom device in my next project. How do I find what's available . . . and who manufactures it?

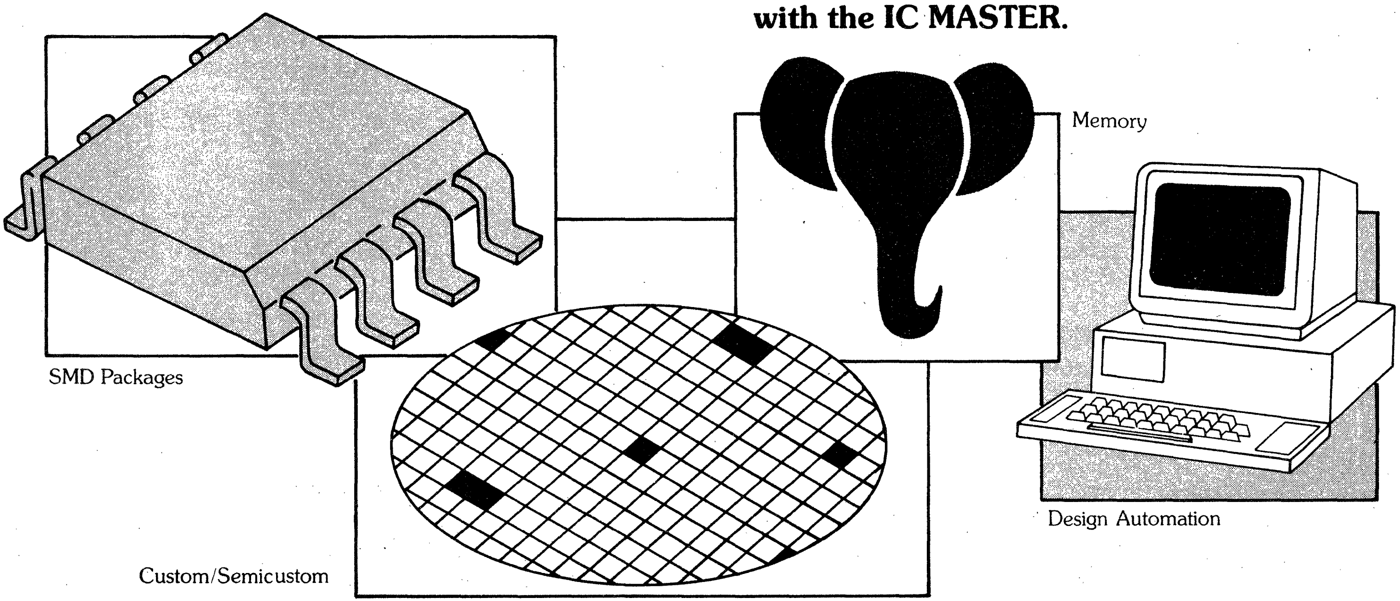
The Custom/Semicustom Master Selection Guide describes such products and services. Design and selection data for digital gate arrays, linear and digital arrays, standard cells, programmable logic and applicable tools are listed here. Interrelationships covering the devices and manufacturers' capabilities as well as the design tools for use by OEM engineers and system designers are shown. The first guide lists custom capabilities. Subsequent guides cover devices and tools; with each device category followed by the specific tools which can be applied. In the case of tools you can also study the information provided in the Design Automation Master Selection Guide.

An important feature of this section is the VLSI/LSI Macrocell Library Directory. Since each gate array and standard cell company normally offers a general library of 74XXX series functions, this directory lists just the larger macro cells. It points out capabilities that tend to differentiate companies.

To answer the question, start with Digital Gate Array section which arranges devices according to manufacturer and then performance, such as gate delay and toggle frequency, as well as technology and number of equivalent 2-input gates. Then review the manufacturer provided information for this option and the other semicustom options.

See Volume II

Finding the right vendor for Custom/Semicustom is easier with the IC MASTER.



Ways to Use IC Master

I have a Mentor Graphics "Idea" workstation. What front end design tool(s) is compatible with my workstation to provide "Logic Simulation," what capability will it provide and who manufactures it?

Start with the Design Automation Selection Guide first. This section provides sufficient information for making initial hardware and software selections by furnishing a number of interrelated directories complemented by manufacturers' data.

To locate tools incorporating software, hardware and a computing platform from one company, start with the Workstation Directory, which lists the design tools by name. For third-party software, which is not sold with the system, refer to the Design Tool interface Directory which shows the hardware-software linkages. If you are searching for suitable tools to run on a given computing platform, consult the Hardware vs. Software Directory. Or if you need tools to do your own semicustom design, use this material in conjunction with the directories in the Custom/Semicustom section.

See Volume II

Selecting the proper workstation, software, and hardware for your application is fast and easy with the IC MASTER.

I know the digital IC I need is available, but is it available in a surface mount package?

See the Surface Mount Directory. It lists which devices are available in surface mount packages, along with the package types and sources. The products are sequenced by base-number so that you can readily identify multiple sources.

Manufacturer-supplied technical data on surface mounting follows the base-number list. Page number references leading to this data and to specific device data pages throughout IC Master are included where appropriate.

See Volume II

Finding a surface mountable device is *Easy* and *Fast* with the IC MASTER.

I need a JAN Voltage Regulator. Does anyone make one?

The Military Parts Directory in the IC MASTER provides a table of manufacturers willing to perform MIL-STD-883 screening. It also contains a bidirectional M38510 to commercial cross-reference index.

In addition you can quickly determine by device function what parts are JAN qualified. The Military Parts QPL Selection first takes the current QPL List, organizes it by function and then identifies each device by manufacturer and the 38510 slash number.

If you're a military part specifier or buyer, you will find this section invaluable.

See Volume I, JAN Voltage Regulators are there.

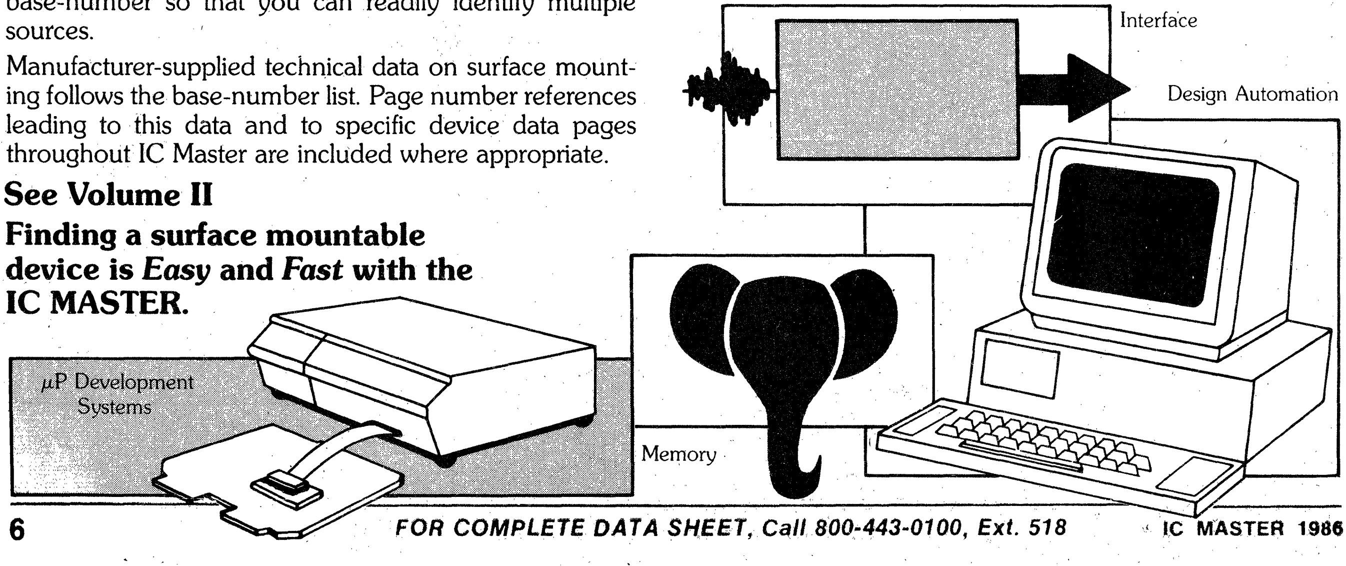
Military part selection is easy with the IC MASTER.

I know the basic part number is 2502 and that's all. Where do I look?

In the Part Number Index all of the prefixes and suffixes have been stripped away to leave only the base, or function, number. These are arranged in alphanumeric sequence. Starting with the first digit you can find every base number. One might be a Linear device; one might be a Memory device. The line and page numbers listed for each device show where it is located in the appropriate Master Selection Guide section. This listing simplifies part identification and part location. Also it groups any reference to application notes, eliminating the guesswork as to which manufacturer publishes application notes on a particular device.

See Volume I

IC MASTER gives you a complete numeric parts listing at your fingertips.



Ways to Use IC Master

How many companies claim to be pin-for-pin, function-for-function compatible with the Intel 8259, and who are they?

The Alternate Source Directory is the most comprehensive industry-wide reference ever published. It lists more than 65,000 direct replacement parts. Unlike usual manufacturer's alternate source guides, this pin-for-pin directory lists numerous alternate sources for a particular device, not just one.

For example, if you are looking for an alternate source to an 8259, you would find a half dozen pin-for-pin replacements listed.

See Volume I

IC MASTER—a total resource library in one volume

What application notes are available on AM-FM radios?

The Application Note Directory is as complete a listing of Application Notes as you'll find anywhere. You'll see application notes on how to design specific circuits, how to maximize performance, how ICs function, plus specific system designs. The Directory lists the devices covered, describes each note, tells who publishes each one and where to get it.

See Volume I

Finding the latest Application Notes is easy with the IC MASTER.

What is the description, temperature range and package type of the Signetics N8X02N?

Fully identifying a part by its number is simple thanks to the IC MASTER Part Number Guide. This guide describes each manufacturer's system of device number prefixes and suffixes. Knowing these will help you decide the type of package, temperature range, pin configuration and other information manufacturers built into the individual coding systems. Part understanding, identification, and ordering instantly become easier.

See Volume I

Decoding a manufacturer's part number code is easy with the IC MASTER.

Now that I've selected the IC's I want to evaluate, where can I get them . . . now?

The Manufacturers and Distributors Directory lists in one convenient section the manufacturer's address, telephone number, who to talk to, plus the sales offices, representatives and distributors, both international and domestic.

See Volume I

Reaching the manufacturer and distributor is easy with the IC MASTER.

MASTER SELECTION GUIDE INDEX

(Guide to Product Categories)

When you know the desired function and need specific devices that perform this function, use this Index first. It is organized by functions and by key words. It leads to the beginning of the section containing not only the specified topic but also related devices.

Master Selection Guide	Starts on Page No.
Military	501
Digital	801
Microprocessor	1401
Microprocessor Development Systems	1801
Microcomputer Boards	2001
Interface	2817
Linear	3301
Memory	3801
Custom/Semicustom	4401
Design Automation	4901
Surface Mount Directory	5201

HOW TO USE THE MASTER SELECTION GUIDES

These guides provide sufficient information to help the engineer make an initial product selection, or to lead him to a group of device numbers and their manufacturers. They make it possible to find the products most likely to satisfy the needs of a particular application. All devices that appear in a selection guide are included in the Part Number Index. If the part number for a device is known by the reader, by referring to the Part Number Index, he can see the page and line number for data on that device. If the manufacturer of the device has included a data sheet in IC MASTER with supplementary data, the location of this data sheet is also listed.

All integrated circuits intended for consumer applications (such as calculator chips, TV game chips and music circuits are combined under one heading for the reader's convenience: Linear-Consumer Circuits. The TTL major families, TTL, TTL-AS, TTL-ALS, TTL-LS, TTL-F, TTL-H and TTL-S, have been combined to facilitate function comparisons. The Microprocessor section includes, in addition to system selection charts, microprocessor system components grouped under the microprocessor type for which they are suited. The Microcomputer Board section groups boards in sequence by data word size and then according to the system bus on which they are based. It also includes an extensive listing of support boards arranged according to the supported system or bus.

Microprocessor Development Systems are sequenced alphabetically by manufacturer and then described by specific performance parameters.

Digital	Arithmetic functions, buffers/inverters, counters, decoders, drivers, flip-flops, gates, latches, memories, multiplexers, multivibrators, oscillators/dividers, shift registers, translators.
Military	Military-commercial and commercial-military cross-references; QPL-38510/xx list; military ICs.
Microprocesser	Microprocessors, microcomputers, and microprocessor system components.
Microprocessor Development Systems	Systems covered range from simple, single-user, text-editing stations to multi-user computers dedicated to software development.
Microcomputer Support Boards	Boards with functions and peripheral controllers.
Interface	Analog switches, analog-to-digital converters, digital-to-analog converters, display converters, display drivers, error checking circuits, keyboard encoders-decoders, drivers, sense amplifiers, and transmitters/receivers.
Linear	Special-purpose amplifiers, arrays, comparators, consumer circuits, followers, operational amplifliers, phase locked loop circuits, telecommunication circuits, timers, voltage regulators, and special functions.
Memory	Character generators, code converters, FIFOs, LIFOS, E^{2}PROMs, PROMs, RAMs, ROMs and shift registers.
Custom/ Semicustom	Custom/Semicustom linear and digital gate arrays, standard cells, programmable logic arrays (PLAs), and all compatible design tools.
Design Automation	Design Automation interrelated tables showing relationships among workstations, computers, software, semicustom manufacturers and CAE/CAD providers.
SMD Packages	Surface Mount Directory from base device numbers to surface mount packages and suppliers.
Alternate Source Directory	Alternate Source Directory... Industry-wide alternate source cross reference pin-for-pin and functional equivalents to available ICs.

SIX KEY PHASES OF NEW SYSTEM DEVELOPMENT

Planning

A good design

is "mastered" early.

The best time for an engineer to pick the integrated circuits that will go into his next design is at an early stage in the design process when the engineer's plans are still flexible enough to take full advantage of the features selected.

There is a point in the early phases of every design when engineers focus on selecting integrated circuits. They examine specifications, weigh relative strengths and weaknesses of various devices, and choose the field of candidates. This critical time in the design cycle when designers want to be sure the right devices are in serious contention for their applications.

This is when the engineer reaches into his technical reference library. Of the material on his shelves, **IC MASTER** is the only reference source that has been especially prepared for this moment.

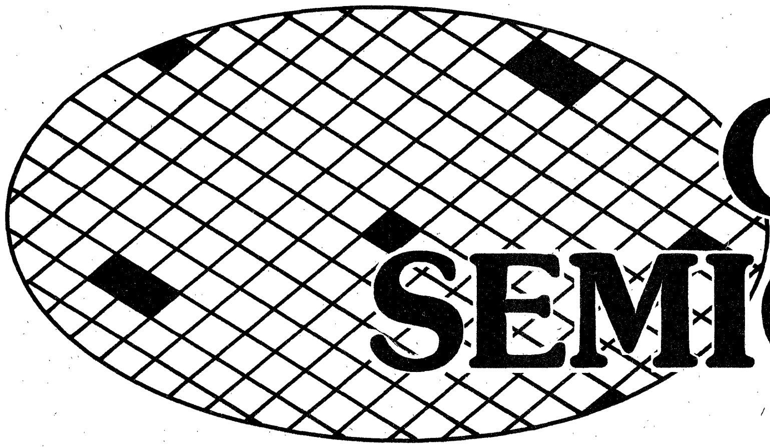
The engineer can look up each precise function that he needs and see all of the devices—and their manufacturers—that might satisfy his requirements. He sees this information for all manufacturers, not just for advertisers. But if an IC maker has chosen to include technical data for his products in **IC MASTER**, the engineer sees each index listing for that manufacturer in **bold face type** accompanied by the **page number** on which the data appears; the engineer can then turn immediately to the advertiser's technical data to see if the device fits his needs.

Next time, begin with the MASTER...where engineering design begins!

IC MASTER

WHAT'S NEW IN IC MASTER

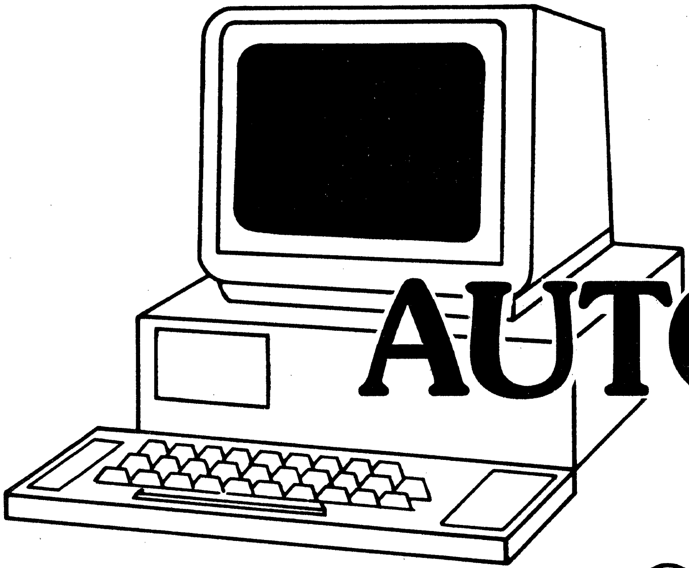
DON'T MISS THE EXPANDED CUSTOM/ SEMICUSTOM IC SECTION



Lists software design tools available for Programmable Logic Devices, Gate Arrays, Standard Cells, and Linear and Linear/ Digital Arrays. Major macros in VLSI/LSI Macrocell Libraries are listed by source.

Volume II, page 4401

WHAT'S NEW IN IC MASTER



DON'T MISS THE NEW DESIGN AUTOMATION IC SECTION

Quick and easy way to determine relationships between workstations, computers, software, semicustom manufacturers and CAE/CAD providers.

Volume II, page 4901

IC MASTER BELONGS ON YOUR BOOKSHELF

If you don't have your own IC MASTER, you can obtain your own copy by ordering now. Write for your own copy or order by telephone as described below.

IC MASTER is a two-volume set of technical data carefully organized to direct the engineer to the integrated circuits and related products that are closest to his specific needs. It is the surest way to find the optimum device to answer an engineering design requirement. By ordering now, you won't have to borrow or search for IC MASTER the next time you need it.

Typical Use of IC MASTER

Can an engineer find out who makes a 256K dynamic RAM with an access time of 120 nanoseconds or faster in less than 30 seconds?
He can if he turns to the Memory section of IC MASTER and looks for the 256K organization (words and bits per word) that he needs.
Because each device is listed in order of access time, he can easily determine the devices that satisfy his speed requirements.

In the United States only:

You can order IC MASTER simply by charging it to your VISA or Master Card credit card. To place your order (USA only) call now: (408) 249-6800/(516) 227-1300. To order outside the USA, see list of authorized IC MASTER distributors on page 1471 of Vol. I.

ORDER YOUR COPY NOW

WHAT'S NEW IN IC Updates

DON'T MISS THE IC UPDATES

The updates keep your IC Master current the year 'round.

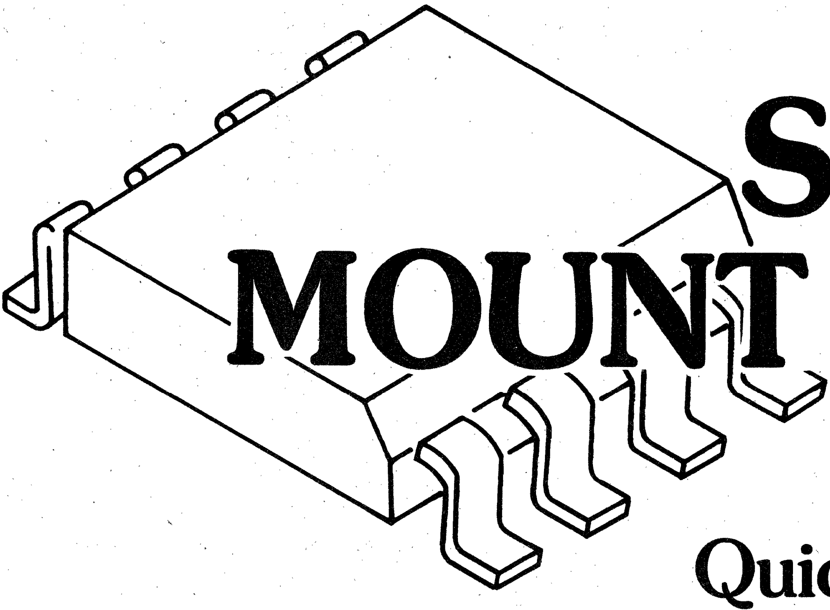
Look for them in the

SPRING, SUMMER and FALL

and remember our year 'round immediate response system toll free number for up-to-date product information: **800 443-0100 (EXT.) 518**

WHAT'S NEW IN IC MASTER

DON'T MISS THE NEW SURFACE MOUNT DEVICE IC SECTION



Quickly shows you by base number and package, what surface mount devices are available and from which manufacturers.

Volume II, Page 5201

PART NUMBER INDEX

This index shows the page and line on that page where each device appears in the Master Selection Guide. The devices are arranged in order by basic numbers so that similarly numbered devices from different manufacturers are grouped together. Basic numbers for microcomputer boards and microprocessor development systems are also included. BOLD FACED listings lead to manufacturers' supplied data sheets. Use this index to locate key operational characteristics, application notes, and device data whenever you have a device number. This is an Index of all parts with identical basic part numbers, regardless of their function. It is not an Alternate Source Directory.

HOW TO USE THE PART NUMBER INDEX

This Part Number Index is arranged in alphanumeric sequence, ignoring the manufacturers' prefixes and suffixes and using the basic part numbers. This basic number sequence is sorted by reading the digits from **left** to **right,** assuming that letters come before numbers. (As an example, these numbers would appear in the following order: 5301, 531, 54LS01, 54139, 555.) Under each basic number, manufacturers' names and full part numbers are listed. The page references in **BOLD FACE** lead to manufacturers' data and application notes. Short editorial descriptions of all Active Applications Notes available from every manufacturer are indicated by a ¶ sign.

The arrangement of this index by base number gives you several advantages. It allows you to find a device by its basic number whether or not you know the name of the manufacturer or the manufacturer's prefixes. Also it groups similar devices together so that when you are looking for data you can quickly determine if the data has been provided in the book by any of the manufacturers and where that data is. Similarly it groups any references to application notes close together so that you do not need to guess which manufacturer might publish application notes on a device before you can locate them.

Once you become familiar with the alphanumeric numbering sequence, you'll find that this index is easy to use.

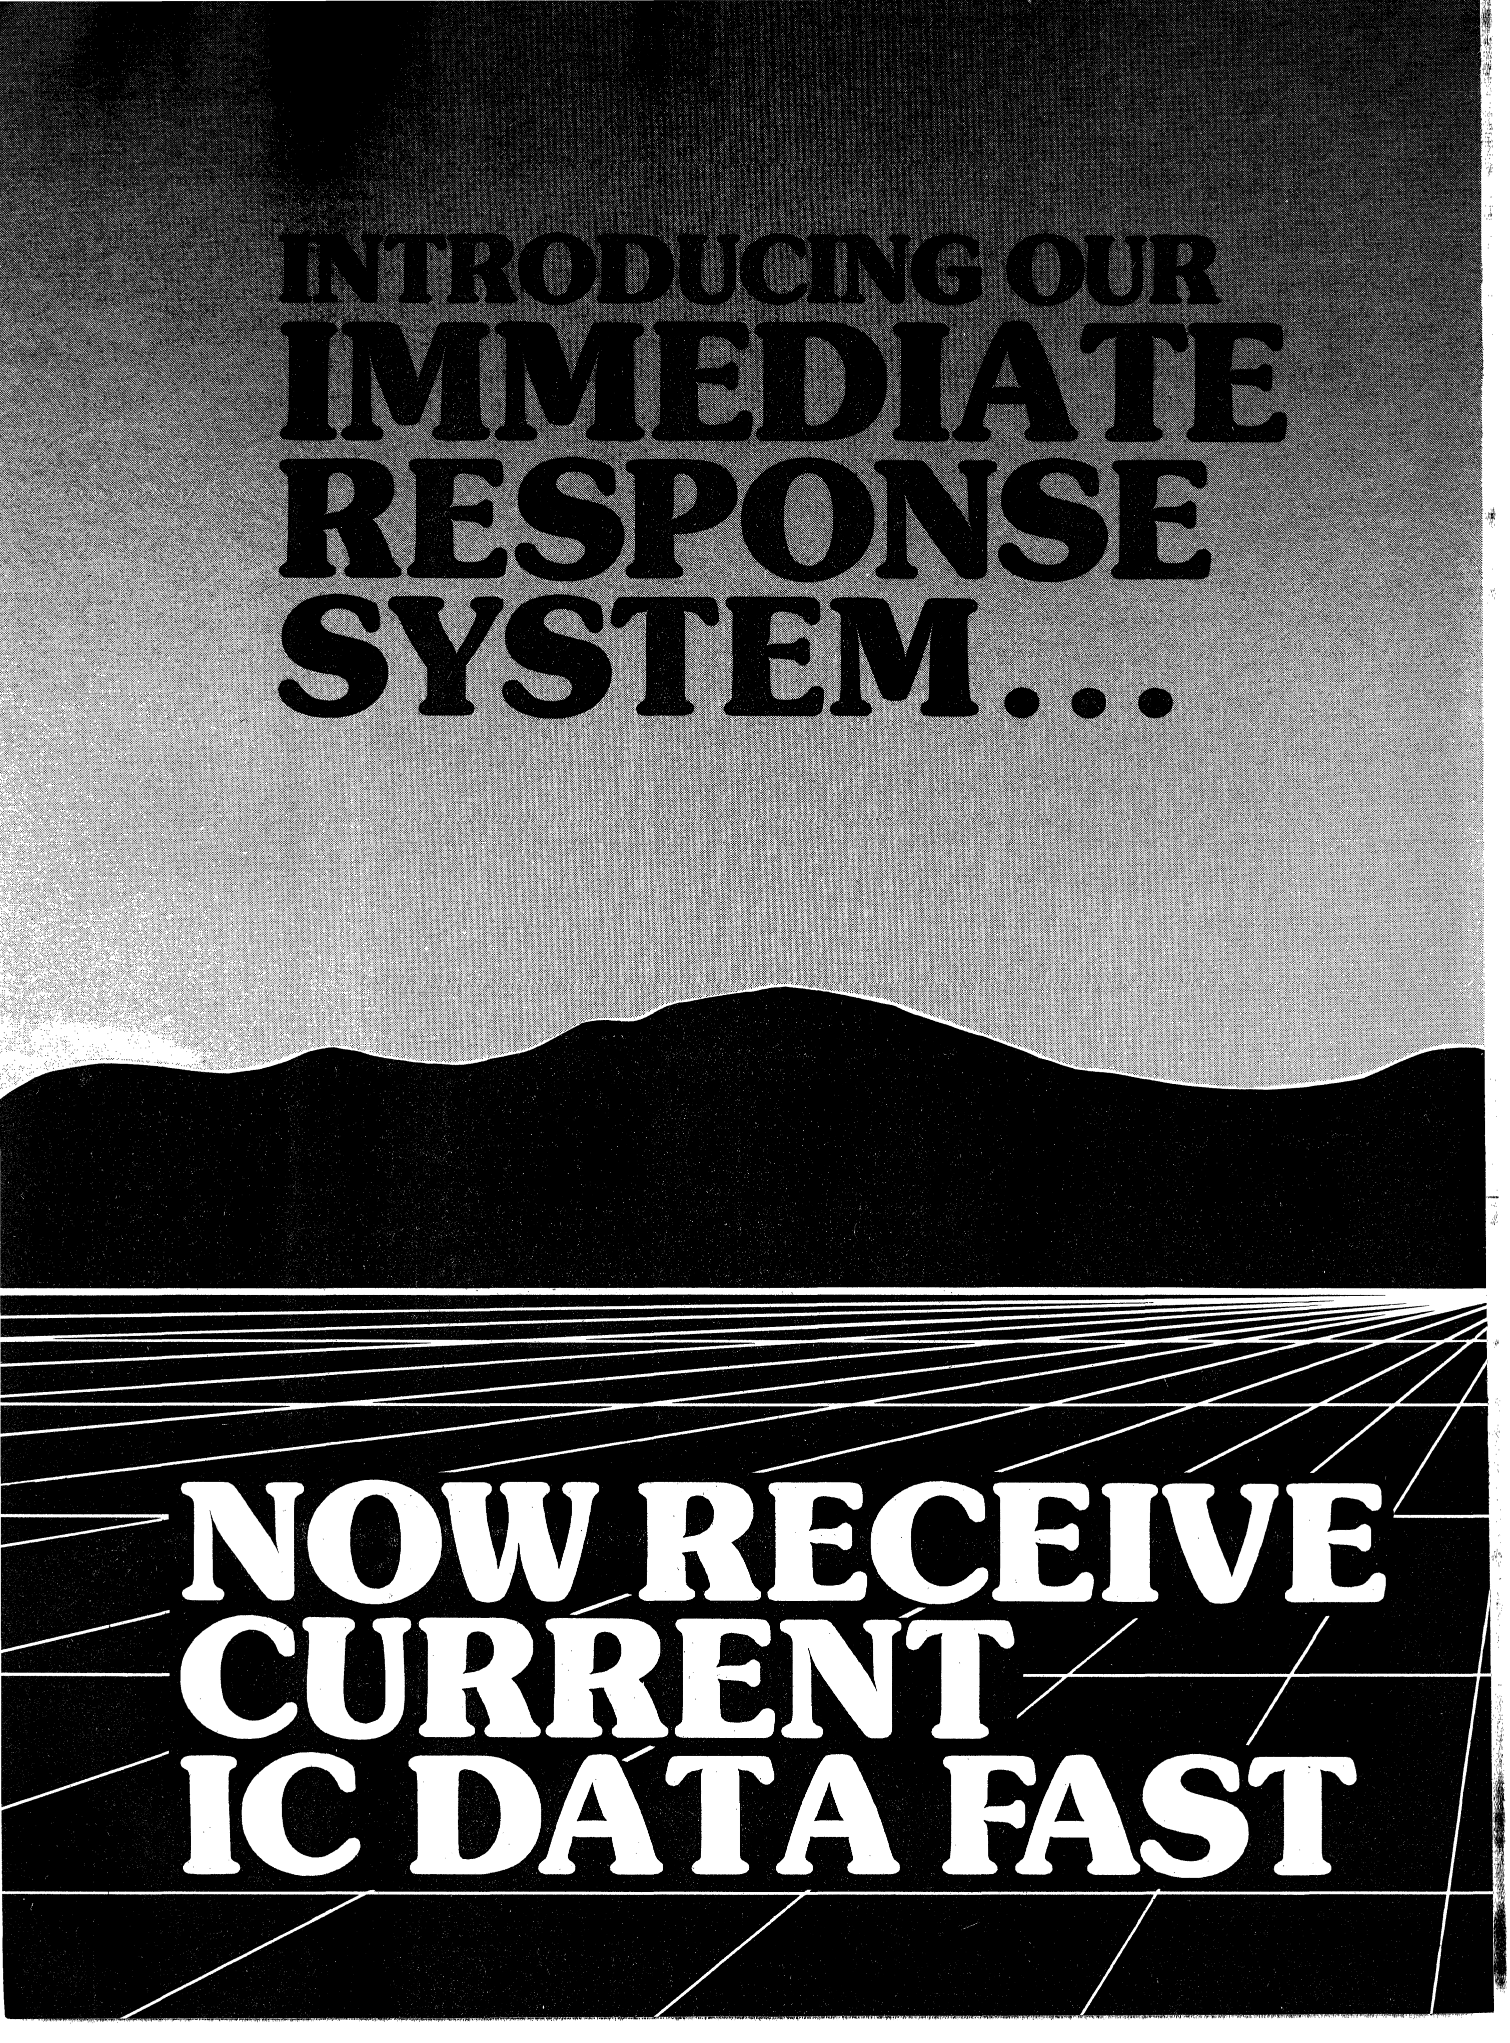
IS THIS A BORROWED COPY?

Avoid the hassle and order your own personal two-volume set of IC MASTER. It's the surest way to simplify your IC selection efforts.

Only IC MASTER allows you to examine and compare the specifications, relative strengths, and weaknesses of all devices in serious contention for your application. And only IC MASTER brings you actual manufacturers' data sheets, allowing you to make complete and definitive device selections.

You can order IC MASTER simply by charging it to your VISA or Master Card credit card.
To place your order (USA only)
call now: (408) 249-6800/(516) 227-1300.
To order outside the USA,
see list of authorized IC MASTER
distributors on page 1471 of Vol. I.



INTRODUCING OUR
IMMEDIATE
RESPONSE
SYSTEM...
NOW RECEIVE
CURRENT
IC DATA FAST

Dear IC MASTER User:

ANNOUNCING . . . A **new**, innovative way to request and receive up-to-date IC product data.

The IC MASTER introduces an IMMEDIATE response system. Operational **24 hours a day, 7 days a week**, you can now phone in your requests for the most current IC product data available from IC manufacturers who have product data sheets in the IC MASTER, at no cost to you. Here's all you do:

Step 1 **Phone 800-443-0100** and ask for Extention #518

Step 2 When asked, simply tell the operator the name(s) of the manufacturer whose part you are interested in . . . the **specific** part number you want information on . . . if you want a data sheet and/or an application note . . . and if you want a salesperson to call.

Step 3 Provide you name, title, company, address, and phone number.

That's all you do! We do the rest. Your request will be in the hands of the company you inquired about within 24 hours.

We will follow up within a week to make sure your request was expedited and your needs were met.

It's important to us that we provide you with the best source of up-to-date IC product data available in the market . . . we've been doing it for over ten years, and we aren't stopping now.

We hope this **added new** service will contribute to a further reduction in your IC selection time.

call 800-
443-0100
518 (ext.)

WHAT'S NEW IN IC Updates

DON'T MISS THE IC UPDATES

The updates
keep your IC Master
current the year 'round.

Look for them in the

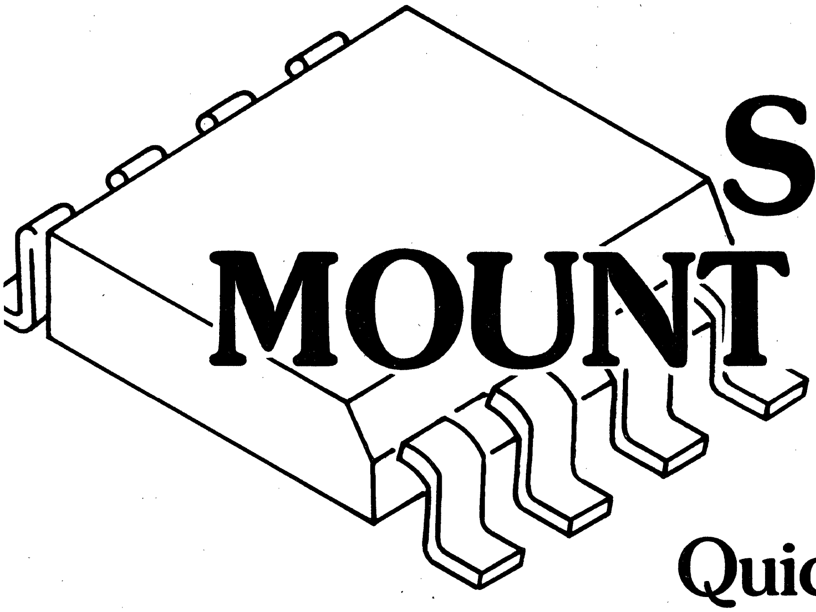
SPRING, SUMMER

and **FALL**

and remember our year 'round
immediate response system
toll free number for up-to-date
product information: **800**
443-0100
(EXT.) **518**

WHAT'S NEW IN IC MASTER

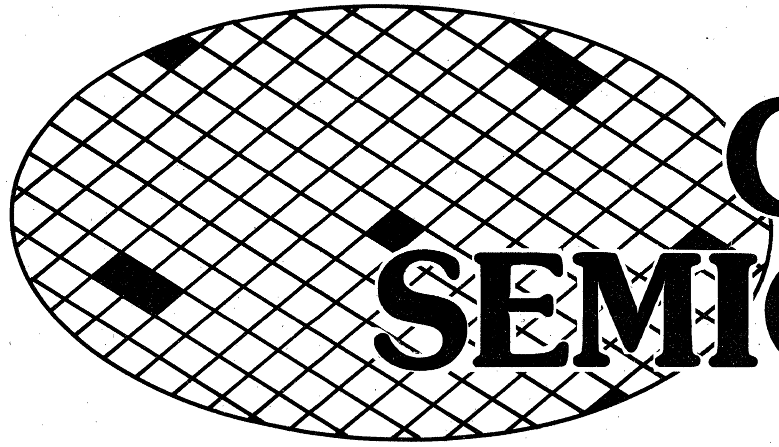
DON'T MISS THE NEW SURFACE MOUNT DEVICE IC SECTION



Quickly shows you by base number and package, what surface mount devices are available and from which manufacturers.

Volume II, Page 5201

WHAT'S NEW IN IC MASTER

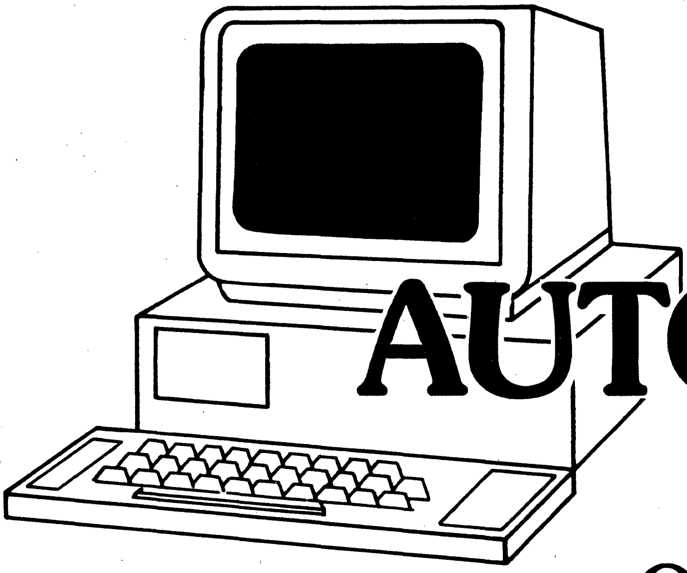


DON'T MISS THE EXPANDED CUSTOM/ SEMICUSTOM IC SECTION

Lists software design tools available for Programmable Logic Devices, Gate Arrays, Standard Cells, and Linear and Linear/ Digital Arrays. Major macros in VLSI/LSI Macrocell Libraries are listed by source.

Volume II, page 4401

WHAT'S NEW IN IC MASTER



DON'T MISS THE NEW DESIGN AUTOMATION IC SECTION

Quick and easy way to determine relationships between workstations, computers, software, semicustom manufacturers and CAE/CAD providers.

Volume II, page 4901

PART NUMBER GUIDE

Each IC manufacturer has his own special method of identifying products, usually through a system of logos, device number prefixes and suffixes. This Part Number Guide is arranged alphabetically by manufacturer and describes each company's part number system. JAN nomenclature is also covered.

Manufacturer Device Identification | Part Number: Prefix | Part Number: Suffix | Example

ADVANCED MICRO DEVICES

Note: Alternate source devices follow original manufacturer's part number and marking system.

Prefix

Functional Group

Code	Group
21	MOS Memory
25	MSI
26	Computer Interface
27	Bipolar Memory & EPROM
28	MOS Memory
29	Bipolar Microprocessor
54/74	Same as 25
60	Analog, bipolar
61	Analog, bipolar
66	Analog, bipolar
79	Telecommunications
80	MOS Microprocessor
81	MOS and Bipolar Peripherals
82	MOS and Bipolar Peripherals
90	MOS
91	MOS RAM
92	MOS
93	Bipolar Logic, Memory
94	MOS
95	MOS Peripherals
1004	ECL Memory
104	ECL Memory
PAL	Program Logic
98	EEPROM
99	CMOS Memory

Type

Code	Type
L	Low Power
S	Schottky
LS	Low Power Schottky
(Blank)	Standard

Suffix

Package

Code	Package
D	Hermetic DIP
P	Molded
F	Flat
X	Dice
L	Leadless chip-carrier

Temperature Range

Code	Range
C	Commercial
M	Military

Example

Prefix AM25 — **Device** S 05 — **Suffix** D M

AM25 — Functional Group

S — Type

05 — Device Number

D — Package

M — Temperature Range

ANALOG DEVICES

Prefix

Code	Meaning
AD	Analog Devices
HA	Hybrid A/D
HD	Hybrid D/A

Suffix

General Information

Code	Meaning
A	Second Generation
DI	Dielectrically Isolated
Z	Operation on ±12V

Temperature Range

Code	Range
A,B,C	Industrial
J,K,L,M	Commercial
S,T,U	Military

Package

Code	Package
D	Hermetically Sealed Dip, ceramic or metal
E	Leadless chip carrier
F	Ceramic Flatpack
G	Pin grid array
H	Metal can, hermetically sealed
M	Metal can DIP, hermetically sealed — computer labs
N	Plastic DIP
Q	Cerdip
CHIPS	Monolithic chip

Example

Monolithic and Hybrid ICs

Prefix AD — **Device** 7516 — **Suffix** AJN

A — General Information

J — Temperature

N — Package

Video Hybrid Products

Prefix HAS — **Device** 1015 — **Suffix** EMB

E — ECL

M — Package

B — Mil Screening

BROOKTREE

Prefix

Family

Code	Family
100-199	D/A Converters
200-299	A/D Converters
300-399	Video Amplifiers
400-449	Color Lookup Tables
450-499	RAMDACS

Suffix

Package

Code	Package
C	Ceramic
P	Plastic
M	Metal
L	Leadless chip carrier
G	Pin grid array
F	Flat package

Example

Prefix Bt — **Device** 100 — **Suffix** K C M

100 — Family

K — Temperature Range and Grade

C — Package

M — High-Rel Screening

Manufacturer Device Identification	Part Number Prefix	 Suffix	Example

EXEL

Exel Designator. All parts start with XL.

Temperature Range
S 0°C to +70°C
E −40°C to +85°C
A −40°C to +105°C
M −55°C to +125°C

Basic Part Number
Memory Products start with either 2 or 4.
Microperipheral Products start with 6 or 8.
'C' in the middle of the Part Number indicates a CMOS Device.

Package Type
C Cerdip
D Plastic Leaded CC
L Ceramic Leadless CC
P Plastic DIP
S Side Braze Ceramic DIP
U Unpackaged (Die)

Speed*
Usually in nanoseconds for memories. See Data Sheet.

Special Features*
See Data Sheet.

For Example:

XLS2816AP-250/E2
2Kx8 E²PROM, 0°C to +70°C, Plastic, 250 nsec, 100 cycle endurance

XLE88C681C/28L
CMOS DUART, −40°C to +85°C, Cerdip, 28 pin & low power version

Example

Prefix	Device	Suffix
XL T	NNNNN P	-SSS /FFFFF

Description
M Indicates Military Operating Temperature Range
I Indicates Industrial Grade
J Indicates a JAN qualified device, but is for internal identification purposes only. All JAN devices must be ordered by M38510 part number (Example: M38510/42001 BQB), and will be marked in accordance with MIL-M-38510 specifications.

Package Type
B Hermetic Package, Type B
C Hermetic Package, Type C
D Hermetic Package, Type D
G Hermetic Package, Pin Grid Array
I Crystal Package
M Metal Can Package
P Plastic Package
R Hermetic Package, Leadless Chip Carrier
X Unpackaged Device

Examples:
D2147H1 High Speed 4096x1-Bit Static Ram (35ns, 180/30mA)
C8080A2 8080A Microprocessor with 1.5 s cycle time, hermetic package Type C, commercial temperature range
MD8080A/B 8080A Microprocessor, hermetic package Type D, military temperature range. MIL-STD-883 Level B processing*

* On military devices, B suffix indicates MIL-STD-883 Level B processing.

MOTOROLA

(ICs may not have the circle on the marking)

Some second source ICs follow the original marking system.

Description
- **MC** Packaged Integrated Circuits
- **MCC** Unencapsulated Integrated Circuit Chips
- **MCCF** Flip-Chip Linear Integrated Circuits
- **MCM** Integrated Circuit Memories
- **LM** Pin-for-Pin Equivalent to Linear Integrated Circuits Made by National Semiconductor
- **MMS** Memory Systems

Package
- **F** Flat Ceramic Package
- **G** Metal Can Package (TO-5 Types)
- **K** Metal Power Package (TO-3 Types)
- **L** Ceramic Dual-In-Line Case
- **P** Plastic Package
- **PQ** ICs Packaged In Staggered-Lead Plastic DIP Packages
- **R** Metal Power Packages (TO-66 Types)
- **T** Plastic Package (TO-220 Type)
- **U** Ceramic Package

SOIC package (small outline IC package),

Package
Dual-In-Line plastic in 8, 14 and 16 leads
SOT package (small outline, transistor package), such as SOT 23, etc.
Leadless Ceramic Chip Carriers
Leaded Plastic Chip Carriers
Now: A ceramic package with a lead count, up to 68 leads of more for direct socketing with boards

	μP	Microprocessor		

Temperature Ranges
Linear Devices
With proprietary linear circuits, a 1-2-3 numbering system is employed.
The 1 denotes a Military temperature range device (−55°C to 125°C), the 2 denotes an Industrial device (−25°C to 85°C), and the 3 denotes a Commercial device (0°C to 70°C). i.e. LM101/LM201/LM301. Exception to this are the LM1800 Series; some hybrid circuits which employ a "C" Suffix; and second-source products which follow the original manufacturer's numbering system.

Digital Devices
CDXXXX-CMOS—
C Suffix −40°C to 85°C,
M Suffix −55°C to 125°C.

DM54XX — All numbers beginning with 5 denote −55°C to 125°C temperature operation.

DM74XX — If the "74" is indicated, the operating temperature is 0°C to 70°C.

DM7XXX — All other numbers beginning with 7 (besides the "74" shown above) are NSC proprietary products and a 7 here indicates −55°C to 125°C.

DM8XXX — All numbers beginning with 8 denote 0°C to 70°C temperature operation.

Manufacturer Device Identification | Part Number: Prefix | Suffix | Example

PRO ELECTRON

Prefix

First Two Letters

Digital

FA - FZ	
GA - GZ	Identify the Family
etc.	

Solitary Circuits

S	Solitary Digital Circuit
T	Analog Circuit
U	Mixed Analog/Digital

(The second letter has no special significance, except H means Hybrid.)

Third Letter

Temperature Range

A	Temp. Range not specified below
B	0°C to +70°C
C	−55°C to +125°C
D	−25°C to +70°C
E	−25°C to +85°C
F	−40°C to +85°C
G	−55°C to +85°C

If a circuit is designed for a wider temperature range, the letter indicating a narrower temperature range or the letter "A" can be used.

Device or Serial Number

Either a 4-digit number assigned by PRO ELECTRON or the serial number (even a combination of figures and letters) of an existing type designation which can be extended to a minimum of a 4-digit number by adding zeros in front of it.

Suffix

Suffix or Version Letter (Recommended)

Single Letter

C	Cylindrical	**Q**	Quad-In-Line
P	Plastic DIL	**F**	Flat Pack
D	Ceramic DIL	**U**	(Uncased) Chip

Other letters have no fixed meaning except Z means customized wiring.

Two Letters

First Letter: General Shape

C	Cylindrical
D	Dual-In-Line (DIL)
E	Power DIL (with External Heat Sink)
F	Flat (Leads on 2 Sides)
G	Flat (Leads on 4 Sides)
K	Diamond (TO-3 Family)
M	Multiple-In-Line (Except Dual-, Triple-, Quad-In-Line)
Q	Quad-In-Line (QUIL)
R	Power QUIL (with External Heat Sink)
S	Single-In-Line (as TO-127 or TO-220)
T	Triple-In-Line

Second Letter: Material

C	Metal-Ceramic
G	Glass-Ceramic (cerDIP)
M	Metal
P	Plastic

Example

Prefix	Device	Suffix
GFB	7400	-DP
GMB	74LS00A	-DC
SAC	2000

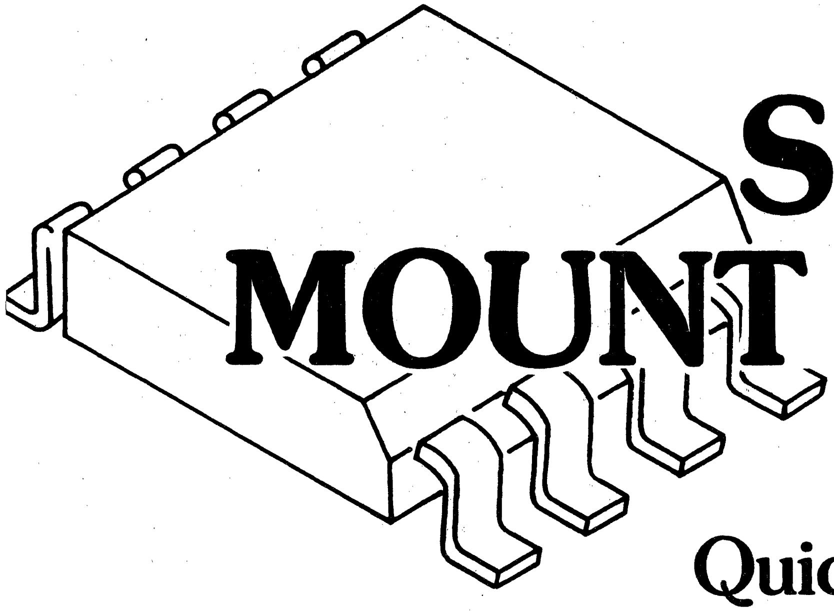
WHAT'S NEW IN IC MASTER

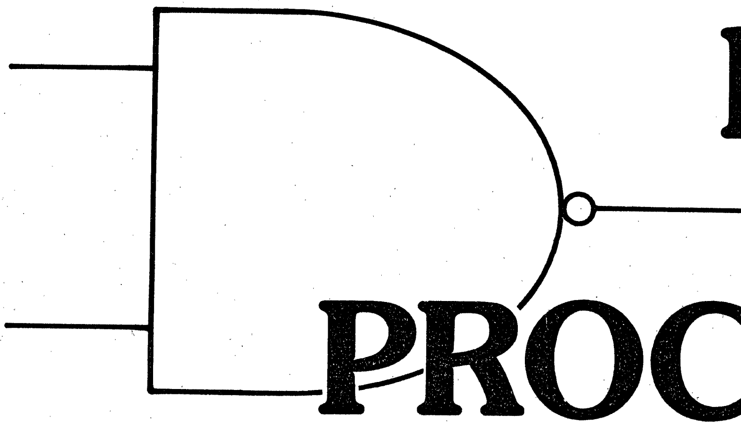


DON'T MISS THE NEW SURFACE MOUNT DEVICE IC SECTION

Quickly shows you by base number and package, what surface mount devices are available and from which manufacturers.

Volume II, Page 5201

WHAT'S NEW IN IC MASTER

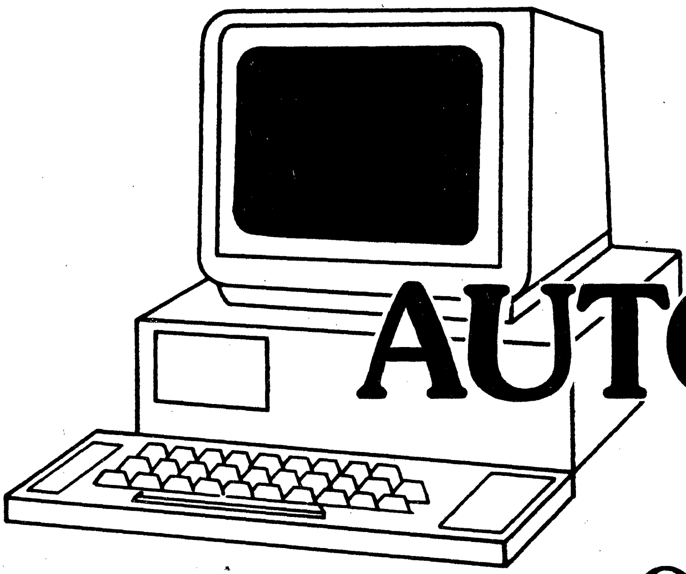


DON'T MISS THE NEW DIGITAL SIGNAL PROCESSING IC SECTION

Easy to find DSP devices.

Volume I, Page 801

WHAT'S NEW IN IC MASTER



DON'T MISS THE NEW DESIGN AUTOMATION IC SECTION

Quick and easy way to determine relationships between workstations, computers, software, semicustom manufacturers and CAE/CAD providers.

Volume II, page 4901

SECTION	PRODUCTS IN SECTION
Digital	Arithmetic functions, buffers/inverters, counters, decoders, drivers, flip-flops, gates, latches, memories, multiplexers, multivibrators, oscillators/dividers, shift registers, translators.
Military	Military-commercial and commercial-military cross-references; QPL-38510/xx list; military ICs.
Microprocesser	Microprocessors, microcomputers, and microprocessor system components.
Microprocessor Development Systems	Systems covered range from simple, single-user, text-editing stations to multi-user computers dedicated to software development.
Microcomputer Support Boards	Boards with functions and peripheral controllers.
Interface	Analog switches, analog-to-digital converters, digital-to-analog converters, display converters, display drivers, error checking circuits, keyboard encoders-decoders, drivers, sense amplifiers, and transmitters/receivers.
Linear	Special-purpose amplifiers, arrays, comparators, consumer circuits, followers, operational ampliflers, phase locked loop circuits, telecommunication circuits, timers, voltage regulators, and special functions.
Memory	Character generators, code converters, FIFOs, LIFOS, E²PROMs, PROMs, RAMs, ROMs and shift registers.
Custom/ Semicustom	Custom/Semicustom linear and digital gate arrays, standard cells, programmable logic arrays (PLAs), and all compatible design tools.
Design Automation	Design Automation interrelated tables showing relationships among workstations, computers, software, semicustom manufacturers and CAE/CAD providers.
SMD Packages	Surface Mount Directory from base device numbers to surface mount packages and suppliers.
Alternate Source Directory	Alternate Source Directory... Industry-wide alternate source cross reference pin-for-pin and functional equivalents to available ICs.

is "mastered" early.

The best time for an engineer to pick the integrated circuits that will go into his next design is at an early stage in the design process when the engineer's plans are still flexible enough to take full advantage of the features selected.

There is a point in the early phases of every design when engineers focus on selecting integrated circuits. They examine specifications, weigh relative strengths and weaknesses of various devices, and choose the field of candidates. This critical time in the design cycle when designers want to be sure the right devices are in serious contention for their applications.

This is when the engineer reaches into his technical reference library. Of the material on his shelves, **IC MASTER** is the only reference source that has been especially prepared for this moment.

The engineer can look up each precise function that he needs and see all of the devices—and their manufacturers—that might satisfy his requirements. He sees this information for all manufacturers, not just for advertisers. But if an IC maker has chosen to include technical data for his products in **IC MASTER**, the engineer sees each index listing for that manufacturer in **bold face type** accompanied by the **page number** on which the data appears; the engineer can then turn immediately to the advertiser's technical data to see if the device fits his needs.

Next time, begin with the MASTER...where engineering design begins!

IC MASTER

NEED MORE PRODUCT DETAILS?

Use the IC MASTER's NEW Telemarketing response system to request additional product information from IC manufacturers and CAE/CAD providers. CALL **800 443-0100 (EXT.) 518**

48 hour turn-around on your request . . . 24 hours a day, 7 days a week service.

APPLICATION NOTE DIRECTORY

The Application Note Directory is a comprehensive guide to the many IC and Microcomputer Board application notes available. It lists the devices covered, describes each note, and tells who publishes each one.

HOW TO USE THE APPLICATION NOTE DIRECTORY

The application notes in this directory can be located by function or device number.

1. To find out what is published by function, locate the closest topics in the index at right, turn to the pages indicated, and scan through the listings.
2. To find all the application notes covering a given device, look up the device in the Part Number Index at the front of this book. The ¶ sign leads to application notes.

The application note descriptions are organized under the headings: Digital, Microprocessor, Microcomputer Boards, Interface, Linear, Memory, Custom/Semicustom and Packaging. Beneath those headings are functional and applications categories arranged alphabetically. Within each category the notes are arranged in alphabetical sequence by title. The mixing of functions and applications is necessary, since application notes do not lend themselves to classification entirely by function or entirely by application. When an application note fits under several categories, it is listed in one and cross referenced by the others. This may mean that you have to spend five minutes checking a number of categories to be sure you've found everything you want, but finding suitable information can save you considerable design time. If an application note covers specific devices or it shows in some detail how certain devices are used, these device numbers are listed in parentheses just below the title.

The application note descriptions are as short as possible. They are designed to save you time in reading while giving an overall sense of the contents. The length of each note is indicated in parentheses on the last line; if the note is bound into a book, the last line will show that it is part of a handbook, databook, catalog, etc.

Once you have determined which application notes you need, contact the manufacturer's sales office or write to the manufacturer. Be sure to give both the title and the application note number. Addresses and phone numbers are listed in the Manufacturers and Distributors Directory.

DIGITAL

Arithmetic

1 **"A 22-Bit Floating Point Registered Arithmetic Logic Unit"**
Preliminary information on a 6 MHz registered ALU able to store, retrieve, add, subtract, and normalize floating point numbers.
TRW LSI (4pp)

2 **"A Four-Cycle Butterfly Arithmetic Architecture"**
Explains the background of the FFT and the computational element called the butterfly. A block diagram of the FFT processor is presented and the DAU (data arithmetic unit) architecture is described in detail. The text's description of the four FFT instructions are supplemented by computational diagrams, block diagrams, a data flow chart and a timing diagram.
TRW/LSI

3 **"A Single-Board Floating Point Signal Processor"**
(TDC1022, TDC1033, TDC1042)
Describes a finite impulse response filter built from a family of floating point devices.
TRW LSI TP24 (6pp)

4 **"AM25S10 Four-Bit Shifter"**
(AM25S10)
Provides functional description and discusses logic equivalents. Applications: up-shift, down and around end shifts, scaling and fixed multiplication.
Advanced Micro Devices (10pp)

5 **"Applications of the TTL/MSI 93S43 4-Bit by 2-Bit Two's Complement Multiplier"**
(93S43)
Describes how to implement a combinatorial multiplication array of any size for two's complement numbers. Shows how to multiply in other number representations. Discusses speed/hardware tradeoffs, normalization of floating point numbers after multiplying, rounding or truncation of double length products.
Fairchild AN-329 (15pp)

6 **"Arithmetic Arrays Using Standard COS/MOS Building Blocks"**
(CD4001, CD4008, CD4011, CD4013, CD4019)
Describes design of a 32-bit full adder/arithmetic logic system. Discusses a four-bit full adder, quad AND-OR select gate, dual D-type flip-flop, input NAND geat, input NOR gate, and an arithmetic register.
RCA ICAN-6600 (6pp)

7 **"COS/MOS Rate Multipliers—Versatile Circuits for Synthesizing Digital Functions"**
(CD4089, CD4527)
Describes operation of a rate multiplier, and the effects of cascading. Covers addition, subtraction, multiplication, division, square and higher order roots, frequency ratios and integration. Also discusses symmetric operations.
RCA ICAN-6739 (12pp)

"Fast Multipliers Using TTL Read Only Memories"
See listing under (Memory) ROMs. (Texas Instruments)

8 **"Floating Point Multiplier"**
Explains how to implement a 24-bit floating point multiplier using one MPY-12HJ multiplier and other devices.
TRW/LSI

Arithmetic (cont)

9 **"High-Speed TTL Adders"**
(DM5483, DM7483)
Describes 16-bit parallel adders, using the DM7283/DM8383, and connections for ripple-carry addition. Also describes BCD adder techniques implemented with these devices. Shows how the devices can be used to improve the performance of MOS storage systems.
National AN-35 (6pp)

10 **"Introducing and Applying the 8x8 CMOS/SOS Multiplier, GP503"**
(GP503)
Provides a detailed description of an asynchronous, 8 x 8-bit expandable multiplier that can be interfaced as an I/O device to most parallel-bus-driven CPU systems.
RCA ICAN-7211 (7pp)

11 **"LSI Multipliers Application Notes"**
Describes larger and smaller word multiplication, higher speed multiplication and division using multiplication.
TRW/LSI

"MECL 10,000 Arithmetic Elements MC10179, MC10180, MC10181"
See listing under (Digital) High Speed Logic (Motorola).

12 **"Multiplier-Accumulator Application Notes"**
Covers the use of multiplier-accumulators including an explanation of the clock, input and output controls. Other discussions include: larger word accumulations, multiplication plus a constant, operation with microprocessors, digital filters and complex multiplication.
TRW/LSI

13 **"NBCD Sign and Magnitude Adder/Subtracter"**
(MC14560, MC14561)
Describes CMOS parallel adder-subtracters for both signed and unsigned natural binary coded decimal (NBCD) numbers.
Motorola AN-738 (7pp)

CMOS

14 **"54C/74C Family Characteristics"**
(MM54C Series, MM74C Series)
Discusses output, noise and temperature characteristics, power consumption, and propagation delay for the 54C/74C logic family.
National CMOS Databook AN-90 (6pp)

"A 3½ Digit DVM Using an Integrated Circuit Dual Ramp System"
See listing under (Linear) Instrumentation (Motorola)

15 **"A COS/MOS PCM Telemetry and Remote Data Acquisition Design"**
(CD4000 Series)
Describes data transmission formats and the following data acquisition sections: analog and digital multiplexers, A/D converters, transmission formatters and system programmers.
RCA ICAN-6289 (12pp)

16 **"A Simplified Approach to Testing CMOS Inverters and Gates"**
Bench tests using a power supply and a V-O-M are described. They include continuity, input leakage, quiescent device current, output voltage, noise immunity, output drive current and threshold voltage.
Solid State Scientific AN-107 (4pp)

DIGITAL

CMOS (cont)

1 **"A Typical Data-Gathering & Processing System Using CD4000A-Series COS/MOS Parts"**
(CD4000 Series)
Describes data-gathering and processing system using CMOS circuits. Includes discussion of input signal conditioning and transmission, the digital processor unit, receiver, memory, arithmetic unit, display unit, output buffer, output transmitter, receiver, and control unit.
RCA ICAN-6210 (11pp)

2 **"AC Characteristics of MM54HC/MM74HC High-Speed CMOS"**
(MM54/74HCXXX)
Even though HC-CMOS logic has speeds similar to LSTTL, there are differences in how this family's speeds are specified. This note discusses how the various measurements of timing parameters are carried out for the HC-CMOS family.
National Semiconductor AN-317 (6pp)

3 **"AC Characteristics of the V54/74ACT Interface Family"**
(V54/74ACT)
Discusses the impact on performance of variations in temperature, power supply, external capacitive loading, and rise, fall, setup, and hold times.
VTC Data Book and Applications Manual, Section 4 (9pp)

4 **"An Introduction to ISO-CMOS Technology"**
Describes the ISO-CMOS process, which offers the low power, high noise immunity, and wide power supply tolerance of CMOS; speeds comparable to those of low-power Schottky TTL; and high functional density.
Mitel Semiconductor MSAN-104 (6pp)

"Application of CD4016A Quad Bilateral Switch"
See "Transmission and Multiplexing of Analog or Digital Signals Using the CD4016A Quad Bilateral Switch" Under (Interface) Data Transmission. (RCA)

5 **"Application of the RCA-CD4093B COS/MOS Schmitt Trigger"**
(CD4093B)
Describes characteristics of the CD4093 quad 2-input Schmitt trigger. Covers applications in waveshaping (sinewave to squarewave, edge delay, edge detection), power-on reset, astable multivibrators and use as a Schmitt trigger for noise immunity.
RCA ICAN-6346 (6pp)

6 **"Applications of CD40107BE COS/MOS Dual Buffer"**
(CD40107BE)
Describes the characteristics of the CD40107BE and applications including a lamp driver, an LED driver, and a relay driver.
RCA ICAN-6564

7 **"Applications of CMOS Integrated Circuits in Communications Equipment"**
(SCL4000 Series)
Uses of SCL4000 Series circuits as frequency synthesizers, digital frequency displays, frequency scanners, and squelch circuits.
Sprague Solid State AN-108 (4pp)

CMOS (cont)

8 **"Astable and Monostable Oscillators using RCA COS/MOS Digital Integrated Circuits"**
(CD4000 Series)
Describes several techniques used to compensate for the normal threshold variation of MOS devices in the design of stable multivibrator circuits for operation at frequencies up to 1 MHz. Also covers applications for multivibrator circuits including VCOs, voltage controlled pulse-width circuits, and phase-locked VCOs.
RCA ICAN-6267

9 **"Battery-Powered Digital-Display Clock/Timer and Metering Applications Utilizing the RCA CD4026A and CD4033A Decade Counters 7-Segment Output Types"**
(CD4009, CD4010, CD4026, CD4033)
Describes the CD4026A/33A ICs and their use with 7-segment display units. Discusses interface packages and methods to help the designer optimize his system. Includes a discussion of battery-operated systems for digital clocks and watches.
RCA ICAN-6733 (16pp)

10 **"CMOS Analog Multiplexers and Switches; Applications, Considerations"**
Covers selection criteria, parameter definitions, handling and design precautions, typical applications, and other topics concerning CMOS analog multiplexers and switches.
Harris Semiconductor AN-520 (9pp)

11 **"CMOS Databook"**
Primarily contains data sheets, but also includes the following application notes individually described elsewhere: AN-77, 88, 90, 118, 138, 140, 177, 200; DB-5, and MB-18.
National Semiconductor $6

12 **"CMOS Expandable Gates"**
(SCL4402A, SCL4412A)
Compares the transfer characteristics of ordinary CMOS gates to those gates using double buffered output. Includes performance characteristics and discusses expansion of SCL4412A and SCL4402A to 12-input NOR, 16-input OR, and other combinations.
Sprague Solid State AN-102 (3pp)

13 **"CMOS Linear Applications"**
(MM74C00, MM74C02, MM74C04)
Describes use of CMOS devices biased to operate at the midpoint of the transfer characteristics.
National CMOS Databook AN-88 (3pp)

14 **"CMOS Oscillators"**
Describes square wave oscillators that can be built with CMOS logic elements.
National CMOS Databook AN-118 (4pp)

15 **"CMOS Wave Shaping and Level Detection"**
Describes methods to obtain modified transfer characteristics of double buffered NAND gates, by connecting inputs together, connecting extra inputs to Vcc, etc. Shows how to obtain variable amounts of hysteresis, and describes systems of level detection using trigger circuits.
Sprague Solid State AN-109 (5pp)

16 **"CMOS, the Ideal Logic Family"**
Talks about the characteristics of CMOS logic. Describes system considerations, interfacing to other logic types, and timing considerations.
National CMOS Databook AN-77 (7pp)

"CMOS/MOS Interfacing Simplified"
See listing under (Interface) MOS/Bipolar (RCA)

"CMOS/MOS Rate Multipliers—Versatile Circuits for Synthesizing Digital Functions"
See listing under (Digital) Arithmetic (RCA)

DIGITAL

CMOS (cont)

1 **"COS/MOS Electrostatic-Discharge Protection Networks"**
(CD4000 Series)
Discussion and illustrations of the various electrostatic-discharge protection networks provided on RCA CMOS parts.
RCA ICAN-6572 (2pp)

2 **"COS/MOS Integrated Circuits Manual"**
(CD4000 Series)
Discusses fabrication, logic system design, and applications of RCA COS/MOS circuits.
RCA CMS-272 $5.00 (168pp)

3 **"Characterization and Specification of the V54/74ACT Interface Family"**
(V54/74ACT)
Covers methods of testing V54/74ACT logic and explains how to design and use a universal test fixture to characterize the circuits.
VTC Data Book and Applications Manual, Section 6 (9pp)

4 **"Comparison of MM54HC/MM74HC to 54LS/74LS, 54S/74S and 54ALS/74ALS Logic"**
(MM54/74HCXXX, 54LS/74LSXXX)
The MM54/74HC family of high-speed logic provides a combination of speed and power characteristics that is not duplicated by bipolar logic families or any other CMOS family. This note compares the electrical and speed characteristics of these families.
National Semiconductor AN-319 (6pp)

5 **"Comparison of the V54/74ACT to 54/74LS, 54/74S, and 54/74ALS Interface Families"**
(V54/74ACT, 54/74LS, 54/74S, 54/74ALS)
A detailed comparison of logic families.
VTC Data Book and Applications Manual, Section 8 (8pp)

6 **"DC Characteristics of the V54/74ACT Interface Family"**
(V54/74ACT)
Compares DC characteristics of the V54/74ACT ICs with those of other logic families, covering data sheet specifications, input and output characteristics, and power supply voltage and quiescent currents.
VTC Data Book and Applications Manual, Section 5 (8pp)

7 **"Design Case: VME Backplane Drive Circuitry"**
(V54/74ACT)
Gives specifics of the use of V54/74ACT parts as VME bus drivers, illustrating their power advantage over ALS parts for the application.
VTC Data Book and Applications Manual, Section 2 (7pp)

"Design of Fixed and Programmable Counters Using the RCA 4018A COS/MOS Presettable Divide-by-"N" Counter"
See listing under (Digital) Counters. (RCA)

8 **"Designing with MM74C908, MM74C918 Dual High Voltage CMOS Drivers"**
(MM74C908, MM74C918)
Presents curves for power dissipation design limits. Shows simple driver circuits plus flasher, oscillator, siren and latch applications.
National CMOS Databook AN-177 (12pp)

9 **"ESD and Latchup"**
(V54/74ACT)
A discussion of the latchup and electrostatic discharge protection circuitry incorporated into V54/74ACT parts.
VTC Data Book and Applications Manual, Section 7 (6pp)

CMOS (cont)

10 **"Follow PC-Board Design Guidelines for Lowest CMOS EMI Radiation"**
(54HC/74HC)
The application of high-speed CMOS logic circuits, such as 54HC/74HC, requires special attention to circuitboard design to minimize conducted and radiated noise. This note describes empirical and analytical techniques for effective EMI control.
National Semiconductor AN-399 (8pp)

11 **"Fundamentals of Testing COS/MOS Integrated Circuits"**
Describes the techniques employed in testing CMOS devices to assure their adherence to data sheet specs.
RCA ICAN-6532 (14pp)

12 **"Getting the Most Out of CMOS Devices for Analog Switching Jobs"**
Describes latch-proof junction isolation, floating-body junction isolation, and dielectric isolation as solutions to CMOS problems when applied to analog design.
Harris Semiconductor AN-521 (7pp)

13 **"Guide to Better Handling and Operations of CMOS Integrated Circuits"**
Recommends specific handling and operating practices to minimize the probability of damage in manufacturing and field environments.
RCA ICAN-6525 (5pp)

14 **"HD-6440 Applications in Multiplexed Bus Systems"**
(HD6640)
Explains the advantages of the HD-6440 CMOS decoder/driver's internal latching of address inputs.
Harris TB-33 (5pp)

15 **"High-Speed CMOS (MM54HC/MM74HC) Processing"**
(MM54HC/MM74HC)
Discusses the advantages of polycrystalline silicon-gate CMOS over metal-gate CMOS. The higher speed is achieved because parasitic capacitances are reduced and transistor gains are increased.
National Semiconductor AN-310 (8pp)

16 **"Improved CMOS Gate Design"**
(SCL4000 Series)
Description of the output buffering of the SCL4000 Series.
Sprague Solid State AN-105 (3pp)

17 **"Interfacing Analog and Digital Displays with CMOS Integrated Circuits"**
(CD4000 Series)
Details some of the CMOS ICs most suitable for interfacing the electronic circuit and the display. For digital displays, basic display operation is also covered as an aid in selecting the appropriate interfacing device.
RCA ICAN-6595 (12pp)

18 **"Interfacing COS/MOS with Other Logic Families"**
(CD4000A Series)
Describes conditions governing interface of CMOS 4000A series with other logic families.
RCA ICAN-6602 (12pp)

19 **"Interfacing to MM54HC/MM74HC High-Speed CMOS Logic"**
(MM54/74HCXXX)
Describes techniques for interfacing MM54/74HC high-speed CMOS devices to other types of logic or to other control circuits.
National Semiconductor AN-314 (10pp)

DIGITAL

CMOS (cont)

1 **"Interfacing with CMOS"**
Describes the electrical characteristics of CMOS inputs and outputs. Discusses interfacing CMOS with CMOS, PMOS, NMOS, DTL/TTL, HTL, and ECL.
Sprague Solid State AN-104 (5pp)

2 **"Introduction to CMOS Integrated Circuits with Three-State Outputs"**
Describes a wide variety of CMOS ICs incorporating transmission gates with standard logic. Gives design rules. Covers applications in analog switching and multiplexing, digital multiplexing, and data bussing.
Motorola AN-715 (19pp)

"MM54C/74C Voltage Translation/Buffering"
See listing under Interface (National)

"NBCD Sign and Magnitude Adder/Subtracter"
See listing under Arithmetic (Motorola)

3 **"National's Process Enhancements Eliminate the CMOS SCR Latch-Up Problem in 54HC/74HC Logic"**
(54/74HCXXX)
Discusses several layout and process enhancements that have eliminated the SCR latch-up problem in National's 54/74HC logic devices. Includes user system design solutions for preventing SCR latch-up in older CD4000 devices.
National Semiconductor AN-339 (8pp)

4 **"Noise Immunity Comparison of CMOS Versus Popular Bipolar Logic Families"**
Compares the noise immunities of TTL, DTL, HTL, and CMOS logic families. Discusses common noise sources, precautions against noise, noise specification, and standard noise tests.
Motorola AN-708A (8pp)

5 **"Noise Immunity of COS/MOS B-Series Integrated Circuits"**
(CD4000UB Series, CD4000B Series)
Evaluates noise immunity of B-Series CMOS devices with respect to noise-energy immunity, and dc/ac noise-immunity. Includes definitions of test terms, discussion of logic-system noise and rejection, and schematics.
RCA ICAN-6587 (9pp)

6 **"Noise Immunity of COS/MOS Integrated-Circuit Logic Gates"**
(CD4000A, CD4001A)
Evaluates noise immunity of the CD4000A/01A gates with respect to external noise, crosstalk, transmission-line reflections, power-line noise, and ground-line noise. Includes schematics and logic diagrams.
RCA ICAN-6176 (8pp)

7 **"Parallel Clocking of Sequential CMOS Devices"**
(CD4000A Series, CD4000B Series)
Shows how to avoid logic-state errors in cascaded CMOS devices by optimizing clock transition time.
RCA ICAN-6948 (2pp)

8 **"Power Dissipation for the V54/74ACT Interface Family"**
(V54/74ACT)
Complete information on the power consuming components of V54/74ACT parts.
VTC Data Book and Applications Manual, Section 3 (5pp)

9 **"Rad-Tolerant ICs are Available Off the Shelf"**
An introduction to the effects of radiation on ICs, radiation tolerance testing, and a family of rad-tolerant microprocessors, RAMs, and ROMs.
Harris CMOS Military

CMOS (cont)

10 **"Radiation Resistance of the COS/MOS CD4000A and CD4000B Series"**
(CD4000 Series)
Discusses the effects of permanent and transient radiation on CMOS devices.
RCA ICAN-6563 (3pp)

11 **"TSC426/427/428 System Design Practice"**
(TSC426, TSC427, TSC428)
Addresses system issues of power supply decoupling and stray lead inductance, critical for the application of high-speed CMOS circuits.
Teledyne Semiconductor AN-25 (4pp)

12 **"Transmission-Line Effects Influence High-Speed CMOS"**
(54HC/74HC)
Discusses the design precautions needed to minimize adverse transmission line effects with high-speed 54HC/74HC devices.
National Semiconductor AN-393 (6pp)

13 **"Understanding Buffered and Unbuffered CMOS Characteristics"**
Presents the relative merits of buffered and unbuffered CMOS devices. Provides background, definitions, and an applications chart.
RCA ICAN-6558 (8pp)

14 **"Understanding CMOS"**
Programmed text covers basic theory, construction, and characteristics of COS/MOS digital integrated circuits. Describes RCA COS/MOS circuits, packaging, specifications, and design factors. Programmed instruction format enables a reader to learn at his own pace.
RCA CPI-279 (80pp) $2.00

15 **"Understanding and Eliminating Latch-Up in CMOS Applications"**
Reviewing the basic theory of SCR operation and its application to CMOS input and output structures, this note explains how design techniques can reduce the risk of latch-up occurences in CMOS analog and digital circuit designs.
Mitel Semiconductor MSAN-107 (16pp)

16 **"Using the CD4047A in COS/MOS Timing Applications"**
(CD4047)
Compares this monostable-astable multivibrator with simpler types of oscillator circuits and discusses applications, including a noise discriminator, low-pass and band-pass filters, a frequency discriminator, and a pulse generator.
RCA ICAN-6230 (13pp)

17 **"Using the CD4520B to Design Dividers with Symmetrical Outputs"**
(CD4520B)
Describes how to use this CMOS counter to divide an input frequency by N where N is any integer from 2 to 256 and obtain outputs with approximately 50% duty cycles.
RCA ICAN-6362 (10pp)

18 **"Using the SCL 4528 Dual Monostable Multivibrator"**
(SCL4528)
Describes operating modes and timing, equations for pulse width calculations.
Solid State Scientific AN-111 (6pp)

DIGITAL

Consumer

1 **"Calculator Learns to Keep Time"**
Describes stopwatch and keyboard controlled interval timing functions using the MM5736 calculator chip.
National MOS/LSI Databook AN-119 (8pp)

2 **"Handheld Calculator Battery Systems"**
Describes the tradeoffs in battery performance for 6.5 to 9.5v calculators driven by 2, 3 and 4 cell as well as 9v. batteries.
National MOS/LSI Databook AN-149 (4pp)

"High Voltage Shift Registers Move Displays"
See listing under (Memory) Shift Registers (National)

3 **"Keyless Lock Circuit"**
(LS7220)
Describes device operation and implementation in a digital lock.
LSI Computer Systems (6pp)

4 **"Timekeeping Advances Through COS/MOS Technology"**
Discusses basic oscillator design considerations, practical oscillator circuits, and some typical timing-circuit applications, including wrist watches, wall clocks, and auto clocks.
RCA ICAN-6086 (12pp)

5 **"Universal Count/Display Circuit"**
(ZN1040AE)
Examines range of applications for a 4-decade up/down counter with BCD and seven-segment outputs. Covers external circuit connections and component values for zero suppression, blanking, decimal-point input, lamp test, and common anode or common cathode LED displays.
Ferranti (23pp)

6 **"Using Standard National Calculators in Industrial and Microprocessor Applications"**
Discusses keybounce and noise rejection, ready signal operation, and zero suppression as they pertain to using calculator circuits in applications.
National MOS/LSI Databook AN-176 (4pp)

Counters

7 **"A 200 MHz Autoranging MECL-McMOS Frequency Counter"**
(MC10000 Series)
Presents basic frequency counter design along with the schematics and diagrams needed to build a 200 MHz autoranging frequency counter.
Motorola AN-742 (11pp)

8 **"A BASIC Program to Configure the CD4059A Programmable Divide-by-N Counter"**
(CD4059A)
Presents a BASIC program to assist the designer in configuring the Jam and Mode input pins of the CD4059A for a desired divide-by-N. A program flow chart and sample output are included.
RCA ICAN-7228 (5pp)

9 **"A Basic Selection Guide to Digital Counters"**
(CD4017, CD4024, CD4518)
Discusses the advantages of the binary ripple counter and compares it with the Johnson decade counter and the BCD counter. Also covers selection of the most suitable counter for specific applications.
RCA ICAN-6552 (6pp)

Counters (cont)

"An MSI 500 MHz Frequency Counter Using MECL and MTTL"
See listing under (Digital) High Speed Logic. (Motorola)

10 **"Applications Using the MK50395 Six Decade Counter Display Totalizer"**
(MK50395, MK50396, MK50397)
Discusses use of the counter in batch control position measurement, greater-than less-than detection, automatic stop, frequency counter, darkroom timer, digital tuning, and N-Pulser applications.
Mostek (16pp)

11 **"Battery-Powered 5 MHz Frequency Counter"**
Describes a battery operated 5 MHz counter built with CMOS for low power operation. Discusses methods to minimize power consumption.
Motorola AN-717 (9pp)

12 **"Calculator Chip Makes A Counter"**
(MM5736, MM5739)
Discusses use of the MM5736 calculator chip as a counter operating up to 120 Hz.
National MOS/LSI Databook AN-112 (6pp)

13 **"Design of Fixed and Programmable Counters Using the RCA 4018A COS/MOS Presettable Divide-by-"N" Counter"**
(CD4018)
Describes the use of this device in single-decade and multi-decade fixed and programmable divide-by-"N" counters. System considerations, such as switch simplifications, component minimization, and speed are also discussed.
RCA ICAN-6498 (6pp)

14 **"Five Digit Accumulator/Elapsed Time Indicator"**
(MC14534)
Describes in detail the circuit for a CMOS 5 digit elapsed time indicator and a 99,999 count accumulator with a 1-999 prescaler.
Motorola AN-743 (5pp)

15 **"Keyboard Programmable Divide-by-"N" Counter with Symmetrical Output"**
(MM54C922, MM74C922)
Describes a circuit to divide by 1 through 16 by pushing a single key for each division ratio.
National DB-5 (2pp)

16 **"New CMOS Counting Functions for Real-Time Applications"**
(CDP1878, CDP1879)
This note describes the CDP1878 dual counter-timer; and the CDP1879 real-time clock, a device offering control features, clock generation, and "wall clock" time. Compatible with many general-purpose CPUs, both devices can operate in memory-mapped and I/O modes of CDP1800 Series microprocessors.
RCA ICAN-7116 (11pp)

17 **"Using the 'AS867 and 'AS869 8-Bit Counters"**
(SN54AS867, SN74ASA87, SN54AS869, SN75AS869)
Describes of how to cascade these 40 to 50 MHz counters with carry look-ahead, program for modulo N applications, and interface with bused systems.
Texas Instruments AR-SDAA002 (8pp)

DIGITAL

Counters (cont)

1 **"Using the MK5009P MOS Counter Time-Base Circuit"**
(MK5009)
Describes the use of the MK5009 along with complete circuits for a digital frequency meter, pulse generator and digitally-programmable one-shot. Discusses operation of the units oscillator circuit.
Mostek AN-104 (4pp)

2 **"Using the SN74160 Family of Synchronous Counters"**
(SN74160, SN74161, SN74162, SN74163)
Describes carry circuit operation, cascading and programming.
Texas Instruments Application Report CA-174 (7pp)

Gallium Arsenide

3 **"Capacitor Diode FET Logic Circuit Approach for GaAs D-MESFET ICs"**
Describes a new circuit design approach for GaAs depletion-mode MESFET digital ICs (capacitor diode-coupled FET logic) that yields 3-GHz clock rates and 100-picosecond rise and fall times.
Gigabit Logic AR-5 (6pp)

4 **"Packages for Ultrahigh-Speed GaAs ICs"**
Describes two 36-pin chip-carrier packages for GaAs ICs.
Gigabit Logic AR-3 (4pp)

5 **"The Operation and Application of PicoLogic GaAs Integrated Circuits"**
Provides a guide to the operation and use of GaAs integrated circuits. Focuses on power supply and application of PicoLogic's unique input-logic switching circuits, and output driver diode clamps.
GigaBit Logic AN-1 (12pp)

General

"Criteria for Choosing Resins and Evaluation Tests for Discrete and Integrated Power Devices in Plastic Packages"
See listing under (Linear) General (SGS-ATES)

6 **"Custom Bipolar Integrated Circuits for Automotive Applications"**
Provides overview of bipolar ICs for customized systems in automotive and other applications. Reviews a typical custom development cycle and examines tradeoffs with other approaches.
Sprague TP79-2 (8pp)

7 **"Digital Telephone-System Components - CODECs—and the μ and A Laws"**
Defines terminology associated with converting telephone systems from analog to digital operation; discusses design and operation of codecs as governed by μ and A laws.
RCA ICAN-6941 (7pp)

General (cont)

8 **"Economics of ISL Gate Arrays"**
(8A1200, 8A1260, 8A1542)
Describes manufacturing cost savings achievable by replacing standard 74-series logic with ISL gate arrays.
Signetics

9 **"HMOS Reliability"**
Describes HMOS technology and device operation. Presents failure mechanisms, reliability testing, and test results.
Intel RR-18 (9pp)

10 **"How Cost Effective Are Custom IC's?"**
(MONOCHIP)
Looks at the relative economies of discrete circuit designs versus semicustom IC's at various volume levels. Economic costs often not analyzed such as rework, supervisory overhead, inventory maintenance, quality assurance, purchasing and stocking costs are included.
Interdesign APN-5 (6pp)

11 **"Logic Design for CMOS and NMOS Monochips"**
(MONOCHIP)
Describes techniques for transforming breadboard logic into MONOCHIP compatible logic using equivalent gates. Uses the 4008 binary adder and 4516 up/down counter as examples.
Interdesign APN-14 (15pp)

12 **"MOS 100-Bit Word Generator"**
Describes how to build a 100-bit word generator using MOS ICs.
National MB-1 (2pp)

13 **"MOS Clock Savers"**
Design and use of MOS Clock-Drive Networks. Offers tips for saving power and lowering component costs.
National MB-5 (2pp)

14 **"Nonvolatile Logic Applications"**
(MN9102, MN9105, MN9106, MN9107, MN9108)
Provides theory and application of several MNOS ICs that combine logic and nonvolatile memory functions. Example applications include an elapsed-time indicator, last-program memory and decade counter.
Plessey (40pp)

15 **"Special Functions Databook"**
Primarily contains data sheets, but also includes the following application notes described elsewhere: AN-10, 13, 28, 33, 38, 48, 49, 63, 75, 76, 156, 159, 180, 215, 219, 221; MB-9, LB-2, 14, 17.
National Semiconductor $6

16 **"Touchcontrol Circuits for Capacitance Switching"**
Describes seven MOS ICs that interface with a capacitive keypad panel to form a nonmechanical switching system. Includes discussion on keyboard scanning, noise immunity, switch size, capacitance values, multiplexing, panel construction and output considerations.
American Microsystems Inc. (15pp)

17 **"Worst Case Design For Integrated Circuits"**
Discusses defining worse case conditions of an IC design parameter variations, breadboarding for verification of worse case conditions and parasitic effects.
Interdesign APN-2 (5pp)

DIGITAL

High Speed Logic

1 **"A High Speed FIFO Memory Using the MECL MC1143 Register File"**
(MCM10143)
Describes the required features of a high speed FIFO design. Different approaches are compared and a design is shown using the MC10143 Multiport Register File.
Motorola AN-730 (6pp)

2 **"An MSI 500 MHz Frequency Counter Using MECL and MTTL"**
(MECL)
Describes design of 8-digit LED readout counter using MECL III, 10,000 and TTL. Discusses two prescalers using MECL, two input amplifier designs, and a time-base controller for the counter's multiphase clock.
Motorola AN-581 (9pp)

"Bussing with MECL 10,000 Integrated Circuits"
See listing under (Interface) Data Transmission (Motorola)

3 **"Interconnection Techniques for Motorola's MECL 10,000 Series Emitter Coupled Logic"**
(MECL)
Describes some of the characteristics of high digital signal lines and gives wiring rules for MECL 10,000 circuits. Discusses p-c board interconnects, board-to-board interconnects, and includes wire-wrapping techniques.
Motorola AN-556 (22pp)

4 **"Interfacing with MECL 10,000 Integrated Circuits"**
(MC1650, MC1692, MC10115, MC10116, MC10124, MC10125, MC10128, MC10129, MC10216)
Discusses circuits to interface ECL with TTL, TTL and IBM busses, MOS, low level signals, and LEDs.
Motorola AN-720 (9pp)

5 **"M10800 MECL LSI Circuits are Designed for High-Performance Microprogrammed Processors"**
Describes individual family members and how they tie together in a system. Includes block diagrams of devices and an instruction set table for the processor.
Motorola AN-792 (12pp)

6 **"MECL Positive and Negative Logic"**
(MECL)
Describes equivalences between positive and negative ECL logic and provides guides for converting between them.
Motorola AN-567 (2pp)

7 **"System Design Considerations"**
(V54/74ACT)
Discusses a family of high-speed, low-power CMOS logic ICs and systems considerations of applying the parts.
VTC Data Book and Applications Manual, Section 1 (13pp)

8 **"The MC1600 Series MECL III Gates"**
(MC1660, MC1661, MC1662, MC1663, MC1664, MC1665)
Gives typical operating characteristics and explains the operation of various gates in the MECL III family. Describes recommended layout, breadboarding, and testing procedures.
Motorola AN-504 (14pp)

9 **"Understanding MECL 10,000 DC and AC Data Sheet Specifications"**
(MECL)
Discusses basic MECL 10,000 gate structure, transfer curve and dc levels. Covers specifications data sheet, including power supply drain current, high and low output voltages, propagation delay, rise and fall times, and toggle frequency.
Motorola AN-701 (7pp)

High-Speed Logic (cont)

10 **"Video Terminal Strips Down to 26 MOS/LSI Chips"**
Discusses the use of single or multiple chip sets to implement the functions of a smart video terminal—programmable I/O and counters, keyboard scanner and encoder, baud rate generator, memory and video timer and controller.
Standard Microsystems AR3-3 (4pp)

11 **"QMOS High Speed CMOS Logic"**
Discusses the design of astable multivibrators using high-speed CMOS integrated circuits, and multivibrator performance up to 10 MHz.
RCA ICAN-7337 (5pp)

12 **"An Introduction to and Comparison of 54HCT/74HCT TTI Compatible CMOS Logic"**
(54HCTXXX, 74HCTXXX)
Describes the HCT logic family with respect to speed versus propagation delay, noise margin tradeoffs, power consumption, and electrostatic discharge.
National Semiconductor AN368 (6pp)

13 **"High-Speed CMOS Demands Proper Decoupling Techniques"**
(82C82)
Explains the design precautions required to avoid the variations in power supply voltage levels that can cause undesirable changes in thresholds and operation of high-speed CMOS parts.
Harris TB-49 (4pp)

14 **"Interfacing FAST to Multiport Memories"**
Discusses applications of the FAST logic family to multi-port, or shared, memory circuits.
Signetics AN-204 (7pp)

15 **"Interfacing HC/HCT QMOS Logic with Other Families and Various Typs of Loads"**
Describes HC/HCT interfaces with LSTTL, CMOS CD4000B-series, NMOS, and ECL devices. Also treats interfaces with terminated buses, displays, and relay or stepping-motor coils.
RCA ICAN-7325 (8pp)

16 **"Modification of LSTTL Test Programs to Test HCT High-Speed-CMOS Logic ICs"**
Describes modifications required in test programs in switching from testing LSTTL devices to HC/HCT devices. The Teradyne J283 test system is used as a frame of reference, but the information given is applicable to most other test equipment.
RCA ICAN-7323 (4pp)

17 **"Power Consumption in QMOS High-Speed Logic"**
Discusses the causes of quiescent and dynamic power dissipation in HC and HCT devices. Presents formulas needed to compute power dissipation in these devices and gives sample calculations.
RCA ICAN-7315 (6pp)

18 **"Power Supply Distribution and Decoupling for QMOS High-Speed-Logic ICs"**
Switching transients generated on the ground and supply rails can dangerously reduce logic noise margin. This note focuses on power supply distribution and decoupling to reduce switching noise in HC/HCT devices.
RCA ICAN-7329 (2pp)

DIGITAL

High-Speed Logic (cont)

1 **"Replacing LSTTL with QMOS High-Speed Logic ICs"**
Compares the performance characteristics of the HC/HCT QMOS family with the LSTTL family. Also discusses precautions to take in driving coaxial cable and ribbon cable with HC/HCT devices.
RCA ICAN-7330 (6pp)

2 **"System Level Comparison of High Speed Technologies"**
Compares the system-level performance of silicon, GaAs, MESFET, HEMT and Josephson technologies for different computer architectures.
GigaBit Logic AR-4 (7pp)

3 **"Terminating F100K ECL Inputs"**
(F100K)
A guide to F100K input characteristics, giving schematics for HIGH termination, utilizing unused gates to terminate multiple HIGHs and LOWs, and pull-up circuits.
Fairchild MHSL-3 (2pp)

4 **"Testing and Specifying FAST Logic"**
Describes the way FAST logic parts are specified, why they are specified in the way they are, and how their performance may be tested in the qualification lab and at incoming inspection.
Signetics AN-202 (6pp)

5 **"Using FAST Logic Functions in Microprocessor Systems"**
The FAST family of oxide-isolated TTL has addressed the problems of interfacing high-performance microprocessors to the rest of the system. This note describes many devices in the FAST family, including octal functions that combine simple buffers and transceivers with other more complex functions such as error detection and correction, specialized memory control circuits, and dual-bus data transfer circuits.
Signetics AN-201 (6pp)

6 **"Using FAST Logic Functions in Microprocessor Systems"**
(74FXX, 74SXX, 74LSXX)
An introduction to FAST oxide-isolated TTL logic devices, including octal buffers and transceivers, octal latches, and error detection/correction chips. Emphasis is on their use in microprocessor systems.
Signetics AN-201 (7pp)

I^{2}L

7 **"Injection Current Sources"**
Describes isoplanar integrated injection logic and its need for an injection current source and gives several source circuits.
Fairchild MC-1 (4pp)

8 **"Custom IC Design Using I^{2}L Technology"**
(XR-IIL-CHIP)
Compares I^{2}L to other technologies. Describes design procedure for linear and digital circuits using master chips.
Exar (5pp)

9 **"Digital Display Systems"**
Discusses decoding, format, multiplexing, zero suppression for LED, LCD, incandescent, fluorescent and gas discharge displays.
Fairchild AN-212/2 (24pp)

I^{2}L (cont)

10 **"Monolithic I^{2}L Test Circuit Using XR-C409"**
(XR-C409)
A monolithic test circuit has been developed for evaluation of speed and performance capabilities of Exar's (I^{2}L technology. This test circuit, designated the XR-C409, is intended to familiarize the I^{2}L user and the system designer with some of the performance features of I^{2}L such as its frequency capability and power-speed tradeoffs.
Exar AN-17 (4pp)

LSI, General

11 **"Semi-Custom LSI Design with I^{2}L Gate Arrays Using XR300 and XR500"**
A design approach to developing complex LSI systems using the devices is described.
Exar AN-16 (6pp)

Multiplexers

12 **"TTL MSI Multiplexers and Demultiplexers"**
(DM7210, DM7842, DM8210, DM8842)
Describes features of DM7210 multiplexer and DM7842 demultiplexer and discusses their use in a synchronous digital data transmission system, a keyboard entry decoder, and as minterm generators.
National AN-37 (8pp)

Pulse Handling

13 **"Nanosecond Pulse Handling Techniques in I/C Interconnections"**
Discusses problems of pulse transmission and measurement for TEM mode on coax, stripline, and above-ground wire systems.
Motorola AN-270 (6pp)

Signal Processing

14 **"A Guide to the Use of the TDC1028: A Digital Filter Building Block"**
(TDC1028)
Gives details on the design of a finite impulse response digital filter, covering such topics as signal data word size, filter length, and coefficient and data word expansion.
TRW LSI TP-22 (10pp)

15 **"A Single Board Floating Point Signal Processor"**
(TDC1022, TDC1033, TDC1042)
Describes the realization of a finite impulse response (FIR) filter using a family of floating point devices.
TRW LSI Products TP-24

16 **"An LSI Approach to Digital Signal Processing Enhances Telemetry Systems"**
Examines the impact of LSI building block hardware on telemetry systems, focusing on digital filtering and spectrum analysis.

Signal Processing (cont)

1 **"Components for Instruments that Employ Digital Signal Processing Techniques"**
Discusses A/D converters as they are used in digital instruments, reviews "flash" A/D technology, and outlines future directions of A/D design.
TRW LSI Products TP-27

2 **"Correlation—A Powerful Technique for Digital Signal Processing"**
Electronic systems that perform correlation are generally bulky and inefficient. This note describes a new LSI chip that enables correlation to be performed with a minimum number of components.
TRW LSI Products TP-17

3 **"Floating Point Hardware for Digital Signal Processing"**
Describes several VLSI chips that reduce the number of components and cost of high-speed, wide-dynamic-range DSP circuits. Discusses chip architecture and applications.
TRW LSI Products TP-25

4 **"2920 Analog Signal Processor Design Handbook"**
(2920)
Through background review and design examples, explains how analog signal processing can be performed with digital signal processing techniques.
Intel (128pp) $7.50

5 **"A Floating Point ALU for Digital Signal Processing"**
(TDC1022)
A brief guide to the operation and application of the TDC1022, a 22-bit VLSI floating point arithmetic unit for digital signal processing.
TRW LSI TP28 (4pp)

6 **"An Introduction to Two Different Finite Impulse Response Structures"**
Discusses an efficient alternative to the tapped delay line implementation of FIR filters.
TRW LSI TP-31 (5pp)

7 **"An LSI Digital Signal Processor for Airborne Applications"**
Discusses the background of digital signal processing with emphasis on radar processors. Described is a digital signal processing board, employing a multiplier-accumulator IC, that includes the basic processor, address generators, controller and system interface.
TRW/LSI

8 **"Bipolar VLSI for High Performance Digital Signal Processing"**
Explains the triple diffusion process used by TRW LSI Products to produce multipliers and multiplier-accumulators. Also included are multiplier configurations for recursive and non-recursive filters and FFTs.
TRW/LSI

9 **"Digital Signal Processing for Radar Systems"**
Shows how VLSI multipliers and multiplier-accumulators can be used in a radar signal processor to achieve: data rate reduction, by means of predictive mechanization; pulse compression, utilizing an FIR matched filter; maximum computational capabilities, via pipelining; high speed convolution, using 2-point DFTs and a complete FFT processor.
TRW/LSI

Signal Processing (cont)

10 **"Floating Point: The Second Generation for Digital Signal Processing"**
(TDC1022, TDC1042, TDC1033)
Discusses the significance of 22-bit floating point ICs for digital signal processing applications, describing an arithmetic unit, multiplier, and registered ALU.
TRW LSI TP26 (7pp)

11 **"General Purpose Format Speech Synthesizer Module Using the Intel 2920 Signal Processor"**
(2920)
Describes phoneme-based speech synthesizer design using the 2920 signal processor.
Intel AP-111 (24pp)

12 **"Hardware Development for a General Purpose Digital Filter Computing Machine"**
Describes the architecture and design of the arithmetic logic unit (ALU) for a digital filter computing machine. The computer control unit (CCU) required to drive the ALU is also explained; the CCU receives user-programmed instructions, interprets them and directs the ALU to perform the appropriate computations.
TRW/LSI

13 **"High-Speed Servo Control with the 2920 Signal Processor"**
(2920)
Describes techniques and principles associated with digital (vs. analog) control system design; includes detailed application examples.
Intel AP-124 (40pp)

14 **"Introduction to the Z-Transform and its Derivation"**
A tutorial discussion of LaPlace and Z-transforms and their use in sampled data systems. Application of the Z-transform to filter synthesis is also treated.
TRW/LSI

15 **"Second Order Recursive Digital Filter Design with the TRW Multiplier-Accumulators"**
Develops the fundamental concepts for second order recursive digital filters and describes some efficient hardware implementations using the TDC1010J multiplier-accumulator.
TRW/LSI

16 **"Using the 2920 Signal Processor in Modem Applications"**
Discusses modem design using digital signal processing techniques and detailed design examples for various modems.
Intel AP-117 (40pp)

TTL, General

17 **"54ALS/74ALS Schottky TTL Applications"**
Complete family characteristics and guidelines for system designs are provided.
Texas Instruments AR-B215 (40pp)

18 **"54ALS/74ALS Schottky TTL applications"**
(54/74ALS Series)
Describes applications of the 54ALS/74ALS Series. Includes discussion of fanouts, transfer characteristics, I/O parameters, speed/power data, and noise margins.
Texas Instruments B215 (40pp)

DIGITAL

TTL, General (cont)

1 **"Characteristics and Applications of Tri-State IC's"**
(DM7093, DM7490, DM7214, DM7230, DM7551, DM7598, DS7831, DS8831)
Describes application of the general configuration of the Tri-State logic family and discusses application of the following: quad bus-buffer gates, dual 4:1 multiplexer, demultiplexer and bus-interchange switch, quad-D flip-flop, expandable 256-bit ROM, and quad driver.
National AN-45 (12pp)

2 **"Digital Phase-Locked Loop Design Using SN54/74LS297"**
(SN54LS297, SN74LS297)
The SN54/74LS297 provides three of the four elements required to implement a phase-locked loop design: a phase detector, K counter, and increment/decrement counter. This note describes how the all-digital design eliminates the need for A/D and D/A conversion and the adverse effects of temperature and supply voltage variations.
Texas Instruments SCA-206A (28pp)

3 **"Digital Phase-Locked Loop Design Using SN54/74LS297"**
(SN74LS297, SN54LS297)
Describes the operation and typical applications of digital phase-locked loop design.
Texas Instruments AR-SCA-206A (28pp)

4 **"Metastable Characteristics"**
The metastable characteristics of a flipflop used for data synchronization can greatly affect system reliability. This report helps the system designer decide what type flip-flop to use and what its metastable characteristics will be.
Texas Instruments SDAA004 (4pp)

5 **"Microprocessor—GPIB Interfacing with the 96LS488"**
(96LS488)
Shows how to interface instruments and system components that talk, listen or talk and listen in accordance with the IEEE-488 standard for programmable instrumentation. Sample applications demonstrate use with various microprocessors.
Fairchild Application Note 351 (24pp)

6 **"Post Molded Leaded Chip Carrier"**
(74LS245)
Describes the advantages of chip carriers over dual in-line packages in terms of real estate savings and reduced manufacturing costs.
Texas Instruments SSYA001 (4pp)

7 **"TTL Integrated Circuits—Applications of MSI Devices"**
Covers counters, modulo-N dividers, decoders, switches, adders, comparators, parity generators, shift registers and bus-ORable flip-flop. Describes many applications, including up/down counters, a stepping waveform generator, shift registers, frequency synthesizers, digital data demultiplexer, analog commutator, minterm generator, ripple carry parallel adder and tape position locator.
National AN-36 (23pp)

8 **"TTL/MSI 9334 8-Bit Addressable Latch"**
(9334)
Describes operation and application, including 16 and 32-bit addressable latches, 16-word by 4-bit memory, demultiplexer and decoder, 8-bit A/D converter and a 16-bit serial-to-parallel converter.
Fairchild Application Note 220 (8pp)

TTL, General (cont)

9 **"Tri-State Logic Applied in a Computer System Can Reduce System Cost and Provide Added Performance"**
(DM8556)
Analyzes Tri-State characteristics using the DM8556 counter/register as an example. Shows how performance of PDP-8 can be improved using TSL.
National AN-73 (7pp)

10 **"Tri-State Logic in High Speed Memories of Microprogrammed Computers"**
(DM8551)
Discusses tri-state logic in general and its use in scratchpad memories. Covers storage of microinstructions and program constants in high-speed ROMs.
National AN-47 (5pp)

11 **"Tri-State Logic in Modular Systems"**
(DS7831, DM8093, DM8094, DM8214, DM8230, DM8551, DM8552, DM8598, DS8831, DM8840, DM8842, DM8846)
Discusses output drive characteristics logical control, safety factors in Tri-State Logic circuits. Describes applications, including complex switching functions, driving and transmitting, multiplexing, data storage, decoding, and data manipulation.
National AN-43 (16pp)

Trigger Circuits

"1.3 Volt IC Flasher, Oscillator, Trigger, or Alarm"
See listing under (Linear) Timers (National)

12 **"CMOS Schmitt Triggers"**
(MC14093B, MC14583B, MC14584B)
Operating characteristics, theory of operation, and Schmitt trigger applications are covered for digital logic systems.
Motorola AN-768A (8pp)

13 **"CMOS Schmitt Trigger—a Uniquely Versatile Design Component"**
(MM54C14, MM74C14)
Analyzes CMOS Schmitt triggers and outlines applications including a light activated switch, an RC oscillator, and a pulse stretcher. Also outlines the benefits of hysteresis.
National MOS/LSI Databook AN-140 (6pp)

14 **"Designer's Encyclopedia of One-Shots"**
Difficulties in the application of bipolar monostable multivibrators are generally due to pulse width or triggering problems. This note presents an overview of one-shots and describes how they work and how to use them properly.
National Semiconductor AN-366 (30pp)

15 **"Designing with SN54/74LS123 Dual Retriggerable Monostable Multivibrators"**
(SN54LS123, SN74LS123)
Includes descriptions of device used in frequency discrimination, missing pulse detection, pulse width detection, frequency doubling.
Texas Instruments Application Report CA-196 (12pp)

16 **"IFL Programmable Retriggerable One Shot"**
Explains the implementation and operation of a programmable retriggerable one-shot using an FPLS82S159 and external clock.
Signetics AN-1 (6pp)

DIGITAL

Trigger Circuits (cont)

1 **"Latches and Flip-Flops with PLS153"**
(PLS153)
Explains how the simple AND, OR, and INVERT functions of the PLS153 can be used to implement memory functions such as latches and edge-triggered flip-flops without external wiring.
Signetics AN-14 (13pp)

2 **"PLD Programmable Retriggerable One-Shot"**
(PLS159)
Details on the construction and operation of a programmable, retriggerable one-shot circuit consisting of a PLS159 and external clock.
Signetics AN-11 (4pp)

Trigger Circuits (cont)

3 **"Schmitt Triggers and Multivibrators"**
(MONOCHIP)
Discusses implementation of Schmitt triggers and multivibrators on an NMOS gate array. Presents design considerations and electrical characteristics for both at 5 and 12 V.
Interdesign APN-13 (7pp)

"Using the CMOS Dual Monostable Multivibrator"
(MM54C221, MM74C221)
Discusses device theory, accuracy, and diagrams typical applications including oscillator circuits, a frequency magnitude comparator, and a linear VCO.
National CMOS Databook AN-138 (6pp)

MICROPROCESSOR

Applications

1 **"Designing with the Microprogram Sequencer GP502"**
(GP502)
The GP502 is an address sequencer designed to control the execution sequence of microinstructions stored in a microprogram memory. This note describes the system architecture and operation, and discusses the use of the GP502 in designing a 16-bit microprogrammable bit slice microcomputer.
RCA ICAN-7327 (28pp)

2 **"Keyless Entry System Using the CDP6805F2 8-Bit Microcomputer Unit"**
(CDP6805F2)
Describes a keyless entry system in which a dedicated CDP6805F2 MCU is used to execute a program that can control a larger configuration to form a secure entry system. Intended only as an aid in better understanding the CDP6805F2 and how it fits into a secure entry system.
RCA ICAN-7197 (10pp)

3 **"279X Application Note No. 1"**
(WD279X)
Describes 279X floppy disk controller design with 8080, 8085, and Z80 microprocessors. Includes timing charts and software examples.
Western Digital AN-1 (24pp)

4 **"279X Application Note No. 2"**
(WD279X)
Describes 279X floppy disk controller design with 6800, 6809, and 6502 microprocessors. Includes timing charts and software examples.
Western Digital AN-2 (22pp)

5 **"279X Application Note No. 3"**
(WD279X)
Describes 279X floppy disk controller design with 8086, Z8000 and 68000 microprocessors. Includes timing charts and software examples.
Western Digital AN-3 (26pp)

6 **"68047 Video Display Generator"**
(S68047)
Describes a low cost IC that provides a link between an MPU and a standard black and white or color television set. Includes software implementation.
Gould AMI AN796801 (12pp)

7 **"A Dual Processor System for Use in the EXORciser"**
Introduces dual processing and presents the design of a dual processor system for use in the EXORciser. In the system discussed, the μP's have control of a common bus on opposite phases of the clock.
Motorola AN-777 (13pp)

8 **"A Dual-Processor System Using Two MC6809E MPUs on a Common Bus"**
(MC6809E)
Provides a description of a dual-processor system in which two microprocessors control a common bus on alternate phases of the clock. Using two MC6809E processors, the system features a single bus structure, the use of common memory by both processors, and one clock generation circuit.
Motorola AN-892 (9pp)

9 **"A General Purpose Frequency Counter Using an M6805 HMOS/M146805 CMOS Family Microcomputer"**
(M6805, M146805)
Provides information for designing a general-purpose microcomputer-controlled frequency counter.
Motorola Semiconductor AN885 (6pp)

Applications (cont)

10 **"A Low Component Count Video Data Terminal Using the DP8350 CRT Controller and the INS8080 CPU"**
(DP8350, INS8080A, INS8250)
Describes a video data terminal system. Provides block diagrams and short descriptions of individual circuit elements as well as system schematic.
National Interface Databook AN-199 (10pp)

11 **"A Low Cost-MOS/LSI Based Smart CRT Terminal"**
(CRT5037, KR3600, ROM4732, CRT8002, COM8046, COM8251, 8085)
Presents design of a "smart" word editing CRT terminal with 29 IC's and programmable format.
Standard Microsystems AN3-1 (20pp)

12 **"A Low-Cost Regulator for Microprocessor Applications"**
(VN4000A)
Describes the construction of a 100 kHz multiple output switching regulator using two VN4000A MOSPOWER FETs.
Siliconix DA80-1 (11pp)

13 **"A Low-Cost Terminal Using the MC6801"**
(MC6801, MC6847, MC1372)
Provides instructions by using an unmodified television set as a monitor terminal by applying a microcomputer, a video display generator and an RF modulator. Includes wiring diagram, program flow chart and program listing.
Motorola AN-798A (21pp)

14 **"A Matrix Printer Controller Using the F8 and F3870 Circuits"**
(F8, F3870)
Describes the construction of a matrix printer controller using the devices. Includes software listings and diagrams.
Fairchild AN-340 (15pp)

15 **"A Radio Set Phase-Lock Loop (PLL) Using an MC6805T2()2 Single-Chip Microcomputer"**
(MC6805T2)
Discusses an application of the MC6805T2 in a system providing keypad tuning of a radio transmitter/receiver. Designed with PLL applications in mind, the chip has a 10-bit mask-programmable reference divider, 14-bit program-accessible divide-by-N register, and phase/frequency comparator.
Motorola AN-883 (42pp)

16 **"A Single Board Terminal Using the Z8690 Universal Peripheral Controller"**
(Z8590)
Describes the I/O part of a computer system in its most rudimentary form, and shows how a universal peripheral controller can be used to offload routine processing tasks from a CPU.
Zilog (23pp)

17 **"A Zero-Crossing Application for the M6805 HMOS Family"**
(MC6805, MC68705U3)
Zero-crossing circuits are typically used when a software time-of-day clock for real-time operating systems or events counting is required. This note gives several examples of zero-crossing detectors, discusses their advantages and disadvantages, and describes a triac controller application using an EPROM-equipped microcomputer.
Motorola Semiconductor AN 902 (16pp)

MICROPROCESSOR

Applications (cont)

1 **"An Application Adding Analog Input/Output to AIM 65 Microcomputer"**
(RM65-5303E)
This note gives an example of how to use an analog I/O module to interface an analog joystick to an AIM 65 microcomputer and provide visual feedback through a CRT display while controlling an X-Y plotter.
Rockwell AN-2171 (6pp)

2 **"An Expanded MC146805F2/G2 Emulator Using the MC146805E2 Microprocessor Unit"**
(MC146805E2, MC146805F2, MC146805G2)
Describes an expanded version of an emulator based on the stand-alone emulators described in Motorola Application Note AN-853. The board includes real-time emulation of the MC146805F2/G2 MCUs; optional on-board debug monitor; external download from EXORciser bus or through serial interfaces; and optional EPROM or static RAM for user program storage.
Motorola AN-884 (28pp)

3 **"An Interactive Graphic System Using the MC6809"**
(MC6809, MC6847, MC1372)
Details procedures for implementing cost-effective graphic displays on the video screen of a small business computer.
Motorola Semiconductor AN-825 (28pp)

4 **"An Introduction to Digital Spectrum Analysis including a High Speed FFT Processor Design"**
Describes the design of a high-speed FFT processor, particularly the architecture and address generation. Also included is an explanation of the use of bit-slice microprocessors as FFT sequencers.
TRW/LSI A-11

5 **"An R6500/1 Microcomputer-Based Printer Controller"**
(R6500/1)
Details the cost-effective application of the R6500/1 to printer control. Covers printer interface, drive, and timing, buffer management, and interrupt routines.
Rockwell No. 237 (55pp)

6 **"Analog-to-Digital Conversion Using the S2000 Family"**
(S2000)
Presents four a/d conversion schemes of varying complexity incorporating the device. Block diagrams are supplied.
Gould AMI AN-79-2K-10 (4pp)

7 **"Application Summary for the MC6805R2-1 Single-Chip Microcomputer"**
(MC6805R2-1)
Gives a detailed explanation and circuit diagrams of the five application modes in which the MC6805R2-1 may be operated (monitor mode, software serial loop, stand-alone A/D Converter, triac controller mode, and color organ mode). A complete program listing for the device is included.
Motorola Semiconductor AN-869 (50pp)

8 **"Automatic Multipoint Pressure Measurement"**
(INS8060)
Details design procedures for making a multipoint pressure measurement and control system using a microcomputer with 12-bit A/D resolution; includes software program listing.
National Semiconductor AN-235 (16pp)

Applications (cont)

9 **"Bicycle Computer Using the CDP6805G2 Microcomputer"**
(CDP6805G2)
Provides schematics, parts layout and computer program listing for construction of a bicycle computer. The computer features include instantaneous speed and average speed measurement, resettable trip odometer, resettable long-distance odometer, cadence, and calibration for wheel size.
RCA ICAN-7198 (28pp)

10 **"Bicycle Computer Using the MC146805G2 Microcomputer"**
(MC146805G2)
Provides schematics, parts layout and computer program listing for construction of a bicycle computer. The computer features include instantaneous speed and average speed measurement, resettable trip odometer, resettable long-distance odometer, cadence, and calibration for wheel size.
Motorola Semiconductor AN-858 (28pp)

11 **"CRT Terminal Design Using the 8275 and 8279"**
(8275, 8279, 8224, 8080, 8257, 8228, 8212, 8251, 2708, 2714, 2716)
Provides component descriptions and system design details needed to apply the 8275 programmable CRT controller and 8279 programmable keyboard/display interface in CRT systems. Flowcharts, sample code, and schematics included.
Intel AP-32 (57pp)

12 **"Communication Interfaces for the IMP-16"**
(IMP-16)
Describes the use of this microprocessor in leased line and switched line applications with the communications conforming to EIA standard RS232-C.
National AN-152 (13pp)

13 **"Controlled Dot Matrix Printer S9900"**
(S9900)
Describes use of the device to control a 7040 series dot matrix printer. Supplies block diagram, flowchart, and software listing.
Gould AMI AN-79-99-03 (7pp)

14 **"Cordless Telephone Sets"**
(PIC7000, ER5901, SP0256, SPR-32)
Describes how the PIC7000 Series microprocessor can be used as a feature telephone controller in conjunction with a DTMF dialer, speech synthesizer, and memory chips. The microprocessor can be programmed to add such functions as a real-time clock, call timer, least-cost routing, and auto redial.
General Instrument AB-202 (2pp)

15 **"Correcting Errors Digitally in Data Acquisition and Control"**
(SDM856/857, MP20, MP21)
Describes how to combine a microprocessor with analog techniques to optimize the compensation of gain and offset errors in digital data-acquisition and control applications.
Burr-Brown Research AN-101 (6pp)

16 **"DCT11-Based Microcomputer System"**
(T11)
Describes a cost-effective application of the T11 microprocessor as a stand-alone system or as an intelligent terminal connected to a host computer.
Digital Equipment Corp. (17pp)

17 **"Data Acquisition Networks with NMOS and CMOS"**
(MC14433, MC6800)
Discusses an 8-channel acquisition network using the MC14433 A/D converter and the MC6800 microprocessor.
Motorola AN-770 (11pp) MP000500

MICROPROCESSOR

Applications (cont)

1 **"Data Handling with the IMP-8"**
(IMP-8, IMP-16)
Covers basic concepts for transferring data from a memory to peripherals.
National AN-117 (4pp)

2 **"Details of INS1771 FDC"**
(INS1771)
Introduces the device and its command set. Provides timing diagrams and system block diagrams.
National AN-220 (10pp)

3 **"Direct Memory Access with the 8257 DMA Controller"**
(8257, 8080A, 8085A)
Examines determining the need for DMA, operation of the device and its application in an MCS-85 system controlling a Burroughs self-scan display panel. Includes diagrams, flowcharts, and software.
Intel AP-48 (4pp)

4 **"FD179X Application Notes"**
(FD179X)
Describes devices and their operation. Includes schematics and timing diagrams.
Western Digital (16pp)

5 **"Feature Telephones"**
(PIC7000, AY-5-9400, SP0256, ER5901, SPR-16)

6 **"Function/Application of the LD122/LD121A ±4½ Digit A/D Converter Set in Measurement Systems"**
An updated version of AN77-3 extending system resolution beyond 10 μV. Describes interfacing guidelines and precautions.
Siliconix AN80-8 (9pp)

7 **"Graphics Using the DP8350 Series of CRT Controllers"**
(DP8350)
General discussion on using the device in CRT graphics applications. Topics covered include using line buffers and memory mapped graphics.
National AN-212 (4pp)

8 **"High-Speed Data Communications Link Using an MC68121 IPC and MC6844 DMAC"**
(MC68121, MC6844)
Describes a microcomputer system designed to provide efficient data transfer. In the system, direct memory access is used to perform data transfers between memory and the data communication link. Includes schematics and timing diagrams.
Motorola Semiconductor AN-886 (8pp)

9 **"High-Speed Digital Servos for Motor Control Using the 2920/21 Signal Processor"**
(2920, 2921)
Describes the use of a single 2920 for implementing a whole position, servo control loop, including tachometer, compensation networks, nonlinear velocity control, and the logic operations required to switch between the different control modes.
Intel AP-124 (36pp)

10 **"How to Use a COP420R/COP444LR"**
(COP420R, COP444LR)
Through the use of programmed EPROMs, the COP420R/COP444LR piggyback EPROM microcontrollers can be used to emulate most of the COPS microcontrollers. This note explains how to configure the devices in various systems.
National Semiconductor AN-330 (4pp)

Applications (cont)

11 **"Implementing an 8-Bit Buffer in COPS"**
(COP440, COP444L)
Sometimes a COP microcontroller must input and/or output 8-bit data, e.g., when handling ASCII data. In some applications the processor must also provide temporary storage for 8-bit data before it is output. This note describes how the COP instruction set and RAM structure can provide a 32 digit, 8-bit buffer for a solution to these applications.
National Semiconductor AN-329 (4pp)

12 **"Initializing the CIO"**
(Z8536, Z8036)
Explains how to initialize the Z8536 and Z8036 counter/timer and parallel I/O units, whose handshake control, bit manipulation, pattern recognition, and interrupt control capabilities extend the range of applications beyong that of traditional counter/timer and parallel I/O circuits.
Zilog (13pp)

13 **"Intelligent Fast Disk Controller Using AM29116"**
(AM29116)
Describes a disk controller using the AM29116 16-bit bipolar microprocessor. Includes microcode.
Advanced Micro Devices (67pp)

14 **"Interfacing M6800 Peripheral Devices to the MC68000 Asynchronously"**
(M6800, MC68000)
Describes a technique for interfacing peripheral devices to an MC68000 microprocessor using a 4-chip TTL circuit.
Motorola Semiconductor AN-808 (9pp)

15 **"Keyboard Display Scanning with Intel's MCS-48 Microcomputers"**
(8035, 8039, 8048, 8049, 8021, 8022, 8748, 8041, 8741)
Presents a software package for interfacing the devices to keyboards and displays. Includes circuit diagrams as well as program details.
Intel AP-40 (24pp)

16 **"Low Cost Versatile CRT Terminal Using the CRT5027 and CRT8002"**
(CRT5027, CRT8002)
Describes devices and their uses in a CRT terminal with a screen format of 16 rows of 64 characters. Provides schematics, block diagram, and the changes required for an 80 character/row, 24 row format.
Standard Microsystems AN2-1 (11pp)

17 **"Low Voltage Inhibit (LVI) Capability of the M6805 HMOS Microcomputer (MCU) Family"**
(M6805)
The low-voltage inhibit option for many M6805 family devices provides a means for the MCU to sense a drop in supply voltage and then shut itself down in a well-defined manner. This note describes the LVI option in detail and discusses several applications.
Motorola AN-892 (20pp)

18 **"MD68SC49 Bus Monitor Applications Guide"**
(MD68SC49)
Outlines use of the MD68SC49 for transparent bus analysis, monitoring several microprocessor elements transparently, and replacing logic analyzers and emulators for hardware/-software development and testing.
Mitel MSAN-109 (11pp)

19 **"Memory-Mapped I/O"**
(TMS9900, TMS9927)
Discusses a technique for transferring 8 or 16 bits in parallel to an I/O port. The method is useful for applications requiring the transfer of complete bytes or words such as for parallel communication links.
Texas Instruments (6pp)

Applications (cont)

1 **"Microprocessor I/O Techniques"**
(TMS9900)
Discusses the selection of the proper I/O mode for different applications to simplify hardware interface and associated software.
Texas Instruments (6pp)

2 **"Microprocessor Mates with MOS/LSI Keyboard Encoder"**
(IMP-16)
Shows how to interface a keyboard to the IMP-16 microprocessor for text editing.
National MOS/LSI Databook AN-128 (6pp)

3 **"Microprocessor Multiplication Accelerator"**
(NCR45CM16)
The repeated multiply-accumulate operations common in many applications slow down an unaided general purpose microprocessor. Designed specifically as a microprocessor "multiplication accelerator," the NCR45CM16 microprocessor bus compatible, 16 x 16 multiplier provides a relatively inexpensive solution to this problem. This note explains how this low-power chip can be interfaced to a system with little additional circuitry.
NCR Corporation M-1 (12pp)

4 **"Motor RPM Control: An INS8060 Multiprocessor Example"**
(INS8060)
Examines multiprocessor theory and system implementation. Includes circuit diagrams and software listings.
National AN-201 (10pp)

5 **"Multimicroprocessor-Based Transistor Test Equipment"**
A modular, low-cost, multiprocessor transistor test system is described, along with its use for testing both traditional parameters and those characteristics directly related to an application.
RCA ICAN-7020 (8pp)

6 **"Multiprocessing Capabilities of the MC68020 32-bit Microprocessor"**
(MC68020)
The MC68020 is the first member of the Motorola 68000 family to support the M68000 Coprocessor Interface directly in hardware. With the addition of two new instructions and an enhanced bus interface, it also supports loosely coupled multiprocessor systems more efficiently than earlier members. This note explains how the M68020 is able to perform these functions, using multiple processors.
Motorola AR-220 (16pp)

7 **"Multiprocessor Controller Using the MC6809E and the MC68120"**
(MC6809E, MC68120)
Discusses the advantages of using a multiprocessor system to provide for throughput expansion without the need for total redesign of the existing system. Includes schematics, block diagrams and flow charts.
Motorola AN-850 (20pp)

8 **"Musical Application for the S2000 Microcomputer"**
(S2000)
Describes capabilities on the device when programmed to generate any of 60 musical frequencies and play on command any one of the twelve pre-programmed tunes.
American Microsystems AN-79-2K-02 (14pp)

Applications (cont)

9 **"Programmable Appliance/Outlet Controller using the S2000/2150"**
(S2000/2150)
Discusses hardware and software considerations for designing a programmable timer based on the S2000/2150 microprocessor interfacing with an LED display and keypad.
Gould AMI AN-79-2K-14 (3pp)

10 **"Programmable Industrial Controller"**
(Programmable Industrial Controller)
Presents the DCT11-AA single-chip microprocessor in 8-bit mode applied to driving an inexpensive, user-friendly programmable industrial controller.
Digital Equipment Corp. (4pp)

11 **"S2000 Software Seconds Timing and Display"**
(S2000)
Gives introductory software program demonstrating use of instructions and programming techniques for controlling LED time display.
Gould AMI AN-79-2K-07 (3pp)

12 **"S2000 Software—Touch Control Keyboard Scan and Display Output"**
(S2000)
Describes the display and keyboard scan subroutines for a typical display output program.
Gould AMI AN792506 (6pp)

13 **"S9900 Simplifies Design of Bidirectional I/O Module"**
(S9900)
Demonstrates a bidirectional I/O module built by incorporating standard addressing and multiplexing logic with the device.
Gould AMI AN-79-99-01 (2pp)

14 **"SBP9989-SBP9966 Software Interrupt Simulation Application"**
(SBP9966, SBP9989)
Discusses the operation of an interrupt controller circuit that can artificially simulate interrupts without INT1/INT15 input, a self-test feature that aids in system traceability and debugging.
Texas Instruments AN-SBP9989 (3pp)

15 **"Serial I/O and Math Utilities for the 8049 Microcomputer"**
(8049)
Provides several program modules which illustrate the increased capabilities of the device over initial members of the family. Modules cover full duplex serial I/O, binary multiply and divide, and binary to BCD and BCD to binary conversions.
Intel AP-49 (22pp)

16 **"Simple Console Controller for the F9450"**
(F9450, MK38P70)
Describes how a specially programmed MK38P70 microprocessor performs the console function for the F9450 microprocessor.
Fairchild MC-2 (11pp)

17 **"Simplify CRT Terminal Design with the DP8350"**
(DP8350)
Describes a low-cost CRT data terminal design based on the DP8350 CRT controller and SC/MP microprocessor. Features screen scroll, RS-232C interface, and adjustable band rate. Includes schematics, flowcharts, and PC board layout.
National Interface Databook AN-198 (10pp)

MICROPROCESSOR

Applications (cont)

1 **"Single-Chip Microprocessor DCT11-AA (8-Bit Mode)"**
(DCT11-AA)
The DCT11-AA provides a choice of multiple hardware operating modes. This note outlines its use in a dynamic 8-bit mode, which reduces overall system cost and simplifies integration into designs using commercially available 8-bit peripheral devices.
Digital Equipment Corp. (9pp)

2 **"Soft Scrolling with the CRT5037 VTAC"**
(CRT5037)
Describes method of performing "soft scroll" with the CRT5037.
Standard Microsystems AN1-3 (4pp)

3 **"Special Considerations in Using the MC6801 Interrupt Capabilities"**
(MC6801)
Reviews MC6801 interrupt operation and discusses important interrupt design constraints.
Motorola Semiconductor AN-807 (11pp)

4 **"Speech Recognition"**
(DCT11-AA)
Describes a minimal speech recognition system, for demonstration purposes, built around the DCT11-AA.
Digital Equipment Corp. (3pp)

5 **"TMS1000 Series Preprogrammed and Standard Devices"**
(TMS1000)
Presents ten different uses of the TMS1000 4-bit microcomputer family in applications ranging from appliance controller to sound generator.
Texas Instruments Application Report MP059 (18pp)

6 **"TMS9900 CRT Controller"**
(TMS9900)
Analyzes a CRT controller system that employs a TMS9900 microprocessor. Contains diagrams of the system and a software monitor routine.
Texas Instruments Application Report MOSA6 (32pp)

7 **"Text to Speech System"**
(SP0256-AL2, PIC7041)
Describes a low-cost text-to-speech synthesis system with unlimited vocabulary. A typical configuration combines a PIC7041 microcomputer, SP0256-AL2 speech processor chip, RAM input buffer, filter, amplifier, and speaker.
General Instrument AB-197 (2pp)

8 **"The CRT5027/37/57: Video Timer-Controller"**
(CRT5027, CRT5037, CRT5057)
Characterizes the device and explains how to program it. Provides examples for systems with 80 characters by 24 rows and 40 characters by 12 rows. Schematics and system block diagrams are included.
Standard Microsystems AN-1-1 (18pp)

9 **"The IMP-16 in Communication Applications"**
(IMP-16)
Discusses communication processor functions, requirements for communications microprocessors and system considerations. Gives programming examples including status monitoring, data transmission, message routing, interrupt handling and error control.
National AN-134 (6pp)

10 **"The IMP-8C as a Data Concentrator"**
(IMP-8C)
Describes the use of this microprocessor in data concentrator applications. Covers use with a full duplex modem, and the terminal controller interface.
National AN-113 (6pp)

Applications (cont)

11 **"The MM58274 Adds Reliable Real-Time Keeping to Any Microprocessor System"**
(MM58274)
Discusses the design constraints and hardware and software considerations that are necessary when a real-time clock is added into a microprocessor system.
National Semiconductor AN-365 (16pp)

12 **"The MM58274 Adds Reliable Real-Time Keeping to Any Microprocessor System"**
(MM58274)
Discusses the design constraints and hardware and software considerations that are necessary when a real-time clock is added into a microprocessor system.
National Semiconductor AN-365 (16pp)

13 **"The WC-11 Portable Computer System"**
(T11)
Demonstrates a portable, battery-powered computer system built around the T11 microprocessor and running standard PDP-11 software. The system includes an 80 x 28-pixel graphic LCD, 4 line x 32 character LCD, thermal printer, 128 Kbyte bubble memory, and microcassette tape drive.
Digital Equipment Corp. (11pp)

14 **"The Z-FIO in a Data Acquisition Application"**
(Z8038)
Illustrates the use of an intelligent 128x8 FIFO buffer in a simple data acquisition application. The device allows the CPU to handle data in blocks rather than requiring it to service an interrupt every 100 TRANSLATION ERRORs.
Zilog (8pp)

15 **"Using the 8202 Dynamic RAM Controller"**
(8202, 8085A, 8086)
Describes the device in detail and illustrates its use. Covers functionality, interfacing, decoupling, and speed selection of memory array. Provides 8085A application examples and an interconnect of the 8086 max mode system with 128K bytes of dynamic RAM.
Intel AP-45 (25pp)

16 **"Using the 8295 Printer Controller"**
(8295)
Describes device which interfaces microprocessors to the LRC 7040 series of dot matrix impact printers. Provides software and schematics for various interface schemes.
Intel AP-54 (31pp)

17 **"Using the CRT5027 VTAC for Double Height Characters"**
(CRT5027)
Outlines procedures for obtaining double height characters using the device and a 32 x 8 PROM. Circuit diagram and program for both the device and PROM included.
Standard Microsystems AN1-2 (2pp)

18 **"Vacuum Fluorescent Display Driven by TMS9940"**
(TMS9940)
Describes how the TMS9940 single-chip microcomputer makes an efficient, low-cost controller for multi-character fluorescent displays.
Texas Instruments Applications Report MP717 (28pp)

19 **"Versatile Thermostat Using CMOS MC146805E2 MPU"**
(MC146805E2)
Describes the design and operation of a dual-setback electronic thermostat using an MC146805E2 microprocessor. Includes schematics, block diagrams and flow charts.
Motorola Semiconductor AN-855 (20pp)

Applications (cont)

1 **"Video Terminal Interface Design Using TMS9927 Controller/Timer"**
(TMS9927)
Describes a terminal interface design for connecting a TM990 microcomputer module with a keyboard and an RS Video Monitor to form a complete stand alone terminal.
Texas Instruments Application Report MP024 (48pp)

General

2 **"Monitor for the CDP6805G2 Microcomputer"**
(CDP6805G2)
The CDP6805G2 ROM contains a monitor routine that makes it possible to evaluate the CDP6805G2 using a standard RS232 terminal. Describes monitor operation along with an assembled listing of the actual program.
RCA ICAN-7200 (16pp)

3 **"16-Bit Operations in the CDP1802 Microprocessor"**
(CDP1802)
Describes various software routines and a few interface circuits that can be used to manipulate full 16-bit values in the CDP1802.
RCA ICAN-6842 (6pp)

4 **"28000 vs 6800 Register Architecture"**
(Z8000)
Examines the difference between the Z8000 and 6800 register architectures on the basis of general-purpose vs special-purpose registers, pairing vs telescoping of subregisters and register-set extensibility.
Zilog (5pp)

5 **"A Comparison of Microcomputer Units: Benchmark Report"**
(Z8611, 8051, MC6801)
Compares the Zilog Z8611, Intel 8051, and Motorola MC6801 microcomputers in terms of functions and features.
Zilog Microprocessor Applications Reference Book 1-15 (13pp)

6 **"A Logical Tester for the R6500/1 One-Chip Microcomputer"**
(R6500/1)
Explains a method of implementing a logical tester for the R6500/1 single-chip microcomputer. The device tests each instruction in every implemented addressing mode of the CPU, I/O port, interrupts, counter-timer, RAM, and ROM.
Rockwell No. 258 (40pp)

"A Non-Volatile Microprocessor Memory Using 4K N-Channel MOS RAMS"
See listing under (Memory) RAMS (Motorola)

7 **"A Study of the Crystal Oscillator for CMOS-COPS"**
Discusses cost/performance tradeoffs in selecting oscillator circuits that cover the frequency range of CMOS COPS.
National Semiconductor AN-400 (rpp)

8 **"A Users Guide to COPS Oscillator Operation"**
(COPS Series)
Provides a brief overview of the COPS microcontroller oscillator circuits in terms of complex frequency analysis.
National Semiconductor AN-326 (4pp)

General (cont)

9 **"An Introduction to Microprocessors and the RCA COSMAC COS/MOS Microprocessor"**
(COSMAC)
Provides an introduction to the fundamentals of microprocessors and to the specific capabilities of the RCA COSMAC microprocessor.
RCA ICAN-6416 (8pp)

10 **"An Introduction to the Use of the General Processor Unit, GP001"**
(GP001)
Covers the functional operation of the GP001 bit-slice processor, emphasizing register file architecture and data sources, port buffer modes, data type selectors, and arithmetic-logic circuitry. Several programming examples are given.
RCA ICAN-7202 (10pp)

11 **"CDP1804 and CDP1805 Processors Improve System Performance and Lower Chip Count"**
(CDP1804AC, CDP1805AC)
Describes the architecture and outlines the capabilities of the CDP1804/5 8-bit CMOS microprocessors. Hardware and software support for the CDP1800 Series is also discussed.
RCA ICAN-6957 (6pp)

12 **"CDP6805 CMOS Family Emulators"**
(CDP6805)
Describes a method of emulation using a processor that can execute the same code as the MCU and can be interfaced with different external memory and peripheral configurations. Gives design criteria and emulator examples for the CDP6805F2 and CDP6805G2.
RCA ICAN-7199 (8pp)

13 **"Comparison Study NSC800 vs 8085, Z80"**
(NSC800)
Compares the NSC800, 8085 and Z80 MPUs on the basis of critical selection factors, including speed, bus structure, architecture, instruction sets and I/O requirements.
National Semiconductor uB 3 (3pp)

14 **"Cost Effective Memory Selection for Z8000 CPUs"**
(Z8000)
Many factors enter into the selection of a CPU and memory characteristics for a given application. This note examines a simple formula that relates these factors to each other and provides examples of the formula applied in common situations.
Zilog (5pp)

15 **"Design Considerations for Conversion to Rockwell R6500/11 and R6501Q from Intel 8051/8031"**
(R6500/11, R6501Q)
Discusses the similarities and differences between two families of microcomputers and the changes required for converting from one to the other.
Rockwell AN-2178 (20pp)

16 **"Designing with the H.E.L.P. Logic Minimizer Utility"**
Describes two software design tools, a virtual array program and logic minimizer, which automatically eliminate the need for manual analysis and reduction of redundant terms.
Harris AN-100 (5pp)

17 **"Error Detection and Correction Using SN54/74ALS632 through SN54/74ALS635"**
(SN54ALS632, SN54ALS633, SN54ALS634, SN54ALS635, SN74ALS632, SN74ALS633, SN74ALS634, SN74ALS635)
Discusses error detection and correction in 32-bit systems. Other areas covered are byte-write, diagnostics, and applications in 16-bit systems.
Texas Instruments AR-SDAA001 (7pp)

MICROPROCESSOR

General (cont)

1 **"Fast Block Moves with the Z8000 CPU"**
(Z8000)
Shows how to use two different mechanisms in Z8000 CPUs to accomplish memory-to-memory transfers at speeds usually associated with DMA equipment. The performance of the mechanisms is compared for both short and long block moves.
Zilog (2pp)

2 **"Four-Bit Single-Chip Microcomputers: Their Nature and Applications"**
(MB8841)
After a brief review of computer architecture, this note explains the design optimization possible by using a "bit wiggler" like the MB8841.
Fujitsu Microelectronics AR-003 (10pp)

3 **"GAPP Memory Expansion"**
Outlines methods by which the Geometric Arithmetic Parallel Processor chip can expand its memory by using external static RAM.
NCR AN-2 (6pp)

4 **"GTE CMOS Brings New Life to 6500-Series Microprocessors"**
(G65SC00)
Describes CMOS replacements for NMOS 6500 microprocessors. Discusses an enhanced instruction set for reducing software bugs, additional op codes for reducing program size, and a bus enable signal for reducing complexity in DMA applications.
GTE Microcircuits 3002-04-00 (16pp)

5 **"Initializing the Z8001 CPU for Segmented Operation with the Z8010 MMU"**
(Z8001, Z8010)
Explaines how a Z8001 CPU with at least one Z8010 memory management unit attached is initialized for segmented operation. Also describes the specification of the initial CPU status to be established in response to RESET, the execution of the first program out of unmapped memory, and the initialization of the first MMU.
Zilog (6pp)

6 **"Keyless Entry System Using an MC146805F2 8-Bit Microcomputer Unit"**
(MC146805F2)
Describes a keyless entry system in which a dedicated MC146805F2 MCU is used to execute a program that can control a larger configuration to form a secure entry system. Intended only as an aid in better understanding the MC146805F2 and how it fits into a secure entry system.
Motorola Semiconductor AN-863 (10pp)

7 **"Memory Mapping Using SN54/74LS610 through SN54/74LS613"**
(SN54LS610, SN54LS611, SN54LS612, SN54LS613, SN74LS610, SN74LS611, SN74LS612, SN74LS613)
Discusses memory mapping philosophy and implementation using the LS610 Series devices.
Texas Instruments AR-SCA-205 (16pp)

8 **"Microprocessor Family Turns to Low-Power CMOS"**
(80C86)
Discusses the 80C86 CMOS microprocessor family, its functional compatibility with NMOS parts, and its advantages for military applications.
Harris CMOS Military Applications p. 8 (7pp)

General (cont)

9 **"New CMOS CDP1800 Series Processors Enhance System Performance"**
Reviews the features and advantages of the CDP1800 Series of CMOS microprocessors.
RCA ICAN-6971 (6pp)

10 **"Product Development for the MC68020"**
(MC68020)
An introduction to the MC68020, the 32-bit implementation of the MC68000 family of microprocessors.
Motorola Semiconductor AR227 (5pp)

11 **"Real-Time Interrupts Using the CDP1804A/5A/6A CMOS Microprocessors"**
(CDP1804A, CDP1805A, CDP1806A)
Explains the theory of real-time interrupt-driven software and gives two sample programs for implementation on the 1804A/5A/6A CMOS microprocessors: one for generating a once-per-second tick rate and 24-hour time; and one for selecting timer-counter coefficients and calculating inherent error.
RCA ICAN-7144 (4pp)

12 **"S6802 Microprocessor Crystal Specification"**
(S6802)
Explains method for specifying the oscillator crystal for the S6802 microprocessor.
Gould AMI AN796803 (1pp)

13 **"S68045 Compared with Motorola MC6845"**
(S68045)
Describes the fundamental difference between the two devices.
Gould AMI

14 **"S9900 Technical Article Reprints"**
(S9900)
A Compilation of six articles covering: a comparison of the 9900, Z8000 and 8086; a real-time control software design using the 9900; a multiprocessor system design using the 9900; and using the 9900 to implement the NBS data encryption standard.
Gould AMI

15 **"Self-Contained Self-Check Unit for M6805 Family Single-Chip Microcomputers"**
(M6805)
Single-chip self-contained microcomputers are significantly more difficult to test than other LSI ICs. This note describes an easy-to-build self-testing unit which uses the on-chip processor to test itself and other sections of the part.
Motorola Semiconductor AN-910 (16pp)

16 **"Software Comparison NSC800 vs 8085, Z80"**
(NSC800)
Compares the instruction sets of the NSC800, 8085 and Z80.
National Semiconductor uB4 (3pp)

17 **"Software Debug Techniques Using the MD68SC49B"**
(MD68SC49B)
Gives debug routines and implementations of an LSI device designed to monitor microprocessor address, data, and control buses.
Mitel MSAN-115 (6pp)

18 **"The Advanced Architectural Features of the Z8 Microcomputer"**
(Z8)
Gives an architectural overview of the Z8 including memory space, register organization, I/O and interrupt structures, counter/timers, and instruction set. Sample application describes a graphics computing system built around the Z8.
Zilog Microprocessor Applications Reference Book 1-3 (12pp)

General (cont)

1 **"The MC6809/MC6809E Sync Instruction"**
(MC6809, MC6809E)
In many applications external interrupts are used to synchronize a microprocessor to external events. However, the latent period required for stacking operations prior to the interrupt routine is often too long. This note describes a solution to this problem by using the SYNC instruction of the MC6809.
Motorola Semiconductor AN-865 (4pp)

2 **"User-Callable Self-Check Subroutines for the M6805 HMOS/M146805 CMOS Family of Microcomputers"**
(M6805, M146805)
Explains the features of self-check routines within members of the M6805 HMOS and M146805 CMOS families. Included are user-callable self-check firmware subroutines. These subroutines check RAM, ROM, Timer, and an A/D converter.
Motorola Semiconductor AN-903 (36pp)

3 **"Using the M6805 Family On-Chip 8-Bit A/D Converter"**
(MC6805R2, MC6805S2)
Written for the digital designer with little or no programming experience, this note covers the factors to be taken into consideration when using microcomputer-resident A/D converters.
Motorola Semiconductor AN900 (20pp)

4 **"Vectoring by Device Using Interrupt Sync Acknowledge with the MC6809/MC6809E"**
(MC6809, MC6809E)
Describes a circuit in which the interrupting device provides all or part of the vector address, thus eliminating the often lengthy time required to poll various devices to determine which peripheral is requesting services.
Motorola Semiconductor AN-866 (6pp)

5 **"Z80 Designers Guide"**
(Z80-SIO, MK3805, MK3807)
Includes general information, technical manuals on the Z80 and MDL families, and several Z80 microcomputer application notes.
Mostek Z80 Designers Guide (464pp) $10.00

6 **"Z8000 vs. 68000: the Address/Data Bus"**
(Z8000, 68000)
The Z8000 time multiplexes one set of lines for address and data, while the 68000 uses two separate sets of lines. This note considers the tradeoffs of the two approaches.
Zilog Microprocessor Applications Reference Book 3-63 (1p)

7 **"Z8600 Interrupt Request Register"**
(Z8600)
Describes the interrupt request register of the Z8600, and explains how to avoid undesirable interrupt requests after the interrupt system is enabled.
Zilog Microprocessor Applications Reference Book 1-29 (1p)

I/O

8 **"A 2.0 MHz MC68B09E System with Transparent Refresh of Dynamic RAM"**
(MC68B09E)
Describes an interface of a MC68C09E to an array of 64K dynamic RAMs, creating the basis for such applications as a smart memory spooler and a virtual RAM disk.
Motorola Semiconductor AN941 (24pp)

I/O (cont)

9 **"A Terminal Interface, Printer Interface, and Background Printing for an MC68000-Based System Using the MC68681 DUART"**
(MC68681)
Presents a complete MC68000/MC68681 interface and a dual-task sample application. Describes software routines for initializing and driving the MC68681 serial channels and counter and for implementing the dual-tasking scheme.
Motorola AN899 (35pp)

10 **"Add Serial Communication Capability to the 8086/8088 Family Using the Z80-SIO"**
(MK3884, MK3885, MK3887)
Explains how the Z80-SIO (MK3884/5/7), a dual full-duplex USART device, can be adapted to the 8086, 8088, and other microprocessors. Includes a schematic for an 8086 minimum system and a sample subroutine.
Mostek 1982/83 Z80 Designers Guide V-1 (5pp)

11 **"An IEEE-488 Bus Interface Using DMA"**
(MC6809, MC68488, MC6844)
Provides information about using the MC6809 processor to form a Talker/Listener IEEE-488 System. Discusses hardware and software considerations of system implementation, and includes a review of data transfer operation, the GPIB, and direct memory access techniques.
Motorola Semiconductor AN-831 (22pp)

12 **"Application Prototype Board (APB) for MC6801/MC6803/MC68701 MCUs"**
(MC6801, MC6803, MC68701)
Describes the design and fabrication of an application prototype board for evaluating single-chip microcomputers in the MC6801 family. Includes a parts list and artwork needed to generate the p-c board.
Motorola AN799A (12pp)

13 **"Asynchronous Communications for the MC68000 Using the MC6850"**
(MC68000, MC6850)
Discusses operation of an asynchronous communications interface adapter and interconnection requirements for use with the MC68000 microprocessor.
Motorola Semiconductor AN-817 (4pp)

14 **"Connecting an EF6800 Family Peripheral to the 8085 Bus"**
(EF6800)
Explains how to derive the control signals required by the EF6800 family of peripheral ICs from 8085 control signals.
Thomson CSF Components NA-017A (11pp)

15 **"Dual-Ported RAM for the MC68000 Microprocessor"**
(MC68000, MCM68B10)
Discusses the use of dual-ported RAMs to provide a means for multiprocessor systems to exchange data without directly interfering with each other. Includes hardware considerations, schematic diagrams, and test programs.
Motorola Semiconductor AN-881 (9pp)

16 **"Expanding 48-Series Program Space in 4K Byte Increments"**
(INS8048)
Reviews the external memory interface for the 48-Series microcomputers and shows how to use external ICs for paging control of add-on memory.
National AN254

MICROPROCESSOR

I/O (cont)

1 **“General Application Principles for EF4440 (ILA) and EF4442 (RTA)”**
(EF4440, EF4442)
Describes the procedures for exchanging data between a microprocessor and the EF4440/2 ARINC 429 circuits.
Thomson CSF Components NA018-A (12pp)

2 **“Hardware Considerations for Direct Memory Access Using the MC6809 Microprocessor Unit and MC6844 DMA Controller”**
(MC6809, MC6844)
Discusses hardware considerations regarding DMA in systems using the MC6809 microprocessor, with emphasis on DMA dead-state protection.
Motorola Semiconductor AN-820 (5pp)

3 **“Increasing Throughput for IMP-16 Serial Input/Output”**
(MM5303)
Describes use of device to improve communication between microprocessor and peripheral with little increase in component count.
National AN-160 (7pp)

4 **“Intelligent Display Controller Designer’s Notes”**
(10937, 10951, 10957, 10939)
Covers a family of vacuum fluorescent display drivers, with details on interfacing to a host microprocessor and to various display formats.
Rockwell AN-2175 (48pp)

5 **“Interfacing EF9365, EF9366, and EF9367 Graphic Display Processors to Z80A, 8085A, 6502 and 2650A-1 Microprocessors”**
(EF9365, EF9366, EF9367)
Gives timing and special requirements for interfacing these graphic display processors to various microprocessors.
Thomson CSF Components NA-032A (13pp)

6 **“Interfacing Higher-Speed R6502s to Low-Speed I/O and Memory”**
(R6502)
Although the 2-MHz and 3-MHz R6502 CPUs can be used to build high-performance microcomputer systems, memory and I/O devices able to operate at these speeds are either costly or unavailable. This note discusses three methods of interfacing an R6502 to slower peripheral devices.
Rockwell No. 296 (3pp)

7 **“Interfacing Microprocessors and Microcomputers with HI5712 High Performance Analog-to-Digital Converter”**
(HI5712)
Discusses use of the HI5712 A/D converter in conjunction with various microprocessors.
Harris Semiconductor AN-528 (6pp)

8 **“Interfacing Multiplexed Bus Peripherals with Non-Multiplexed MPUs”**
(MC6800, MC6809, MC146818, MC146823)
Discusses methods for providing an interface between non-multiplexed bus MPUs and multiplexed bus peripherals.
Motorola Semiconductor AN-864 (4pp)

9 **“Interfacing the DP8408/09 to Various Microprocessors”**
(DP8408, DP8409, Z80A, Z8000, MC68B09)
Demonstrates a typical application of the DP8408 dynamic RAM controller/driver in Z80, Z8000 and MC68B09E-based systems.
National Semiconductor AN-309 (16pp)

10 **“Interfacing the Series 3200 CPUs to the Multibus”**
(3200)
Presents an implementation of the arbitration section of a Multibus interface specially designed for the Series 32000 CPUs.
National Semiconductor AN-406 (5pp)

I/O (cont)

11 **“Interfacing the Z-BUS Peripherals to the 8086/8088”**
(Z8030, Z8036, Z8038)
Discusses a general design that enables the 8086/8088 processors to interface with the Z-Bus peripherals.
Zilog (8pp)

12 **“Interfacing the Z8500 Peripherals to the 68000”**
(Z8500)
This note discusses the Z8500/Z6800 interfaces and presents hardware examples and verification techniques.
Zilog (12pp)

13 **“Interlaced Video Displays Utilize Low Cost CRT Controllers”**
Discusses the design of interlaced raster scan CRT displays that refresh at half the usual rate and thus require less expensive components.
Standard Microsystems AR1-5 (6pp)

14 **“Low-Cost CSMA/CD Using FIFO/8001 EDLC Interconnection”**
(8001, 8002, 8003)
Describes a method for interfacing an Ethernet communications channel to a computer bus using FIFO buffer memory, turning the channel into an I/O port through which message bytes can be serially transferred.
SEEQ AN-7 (6pp)

15 **“MM58167A Real Time Clock Design Guide”**
(MM58167A)
Covers hardware interface to microprocessors, clock interrupts, oscillator operation, accuracy, calibration techniques, software, and battery backup considerations for the MM58167A real-time 24-hour clock.
National Semiconductor AN353 (18pp)

16 **“Microcomputer I/O Systems-Glossary of Terms and Definitions”**
Explains terminology used in microcomputer I/O Systems.
Burr-Brown AN-124 (2pp)

17 **“Microprocessor Interface Methods for High-Speed Data Acquisition Systems”**
(HI5900, HI5712)
Describes system configurations and operation of high-speed data acquisition systems using the HI5900 analog signal processor and the HI5712 12-bit A/D converter.
Harris Semiconductor AN-529 (3pp)

18 **“Microprocessor-Compatible DACs and the MC6890”**
(MC6890)
A microprocessor-compatible DAC requires latches on the digital input lines and an enable input. The MC6890 microprocessor-compatible DAC meets these requirements by incorporating two input latches and a latched enable signal. This note discusses DAC theory, specific interface examples with several microprocessors, and sample applications.
Motorola Semiconductor AN-842 (32pp)

19 **“Microprocessors—An Introduction”**
Shows system components, defines terms and describes operation of an elementary computer system.
National AN-114 (4pp)

20 **“NS8050U Microwire Plus Interface”**
(ANS8050, 8048)
Describes the features of the Microwire Plus, a serial communications interface between 8048 microcontrollers and peripheral devices. Several programming examples are given.
National Semiconductor AN-358 (6pp)

I/O (cont)

1 **“NS8050U Microwire Plus® Interface”**
(NS8050)
Describes the operation and applications of a serial communications interface for the 8048 microcontroller family.
National Semiconductor AN358 (5pp)

2 **“Printer Control with the R6522 Versatile Interface Adapter (VIA)”**
(R6522)
Describes how a dot matrix printer mechanism can be interfaced to an AIM 65 microcomputer using an on-board VIA to control all printer functions.
Rockwell No. 256 (22pp)

3 **“Prioritized Individually Vectored Interrupts for Multiple Peripheral Systems with the MC68000”**
(MC68000)
Reviews MC68000 interrupt structure and discusses circuits comprised of standard TTL parts for generating interrupt vector numbers.
Motorola Semiconductor AN-819 (6pp)

4 **“R6551 Asynchronous Communications Interface Adapter (ACIA)”**
(R6551)
Details the operation, interface requirements, and diagnostic operating modes of the R6551 ACIA, a program-controlled interface between 8-bit microprocessor-based systems and serial communications data sets and modems.
Rockwell No. R6551 (19pp)

5 **“RS-232C Interface for AIM 65”**
(R6500)
Two low-cost methods are described for allowing the AIM 65 to communicate with CRTs and printer terminals having a standard RS-232C serial channel.
Rockwell No. 230 (1p)

6 **“SBP9989 Memory Interface to SMJ5517 16K CMOS SRAM”**
(SBP9989, SMJ5517)
Outlines the requirements for interfacing the SMJ5517 static RAM to an SBP9989. Details include line loading factors, timing considerations, and address line buffering.
Texas Instruments ANSP9989 (4pp)

7 **“Selecting Input/Output Options on COPS Microcontrollers”**
(COPS Series)
Provides a guide to the user-selectable input and output options available for COPS microcontrollers. Summarizes capabilities of each I/O option.
National Semiconductor AN-401 (10pp)

8 **“Standard SCSI Bus Facilitates Peripheral Control”**
(MC68230)
Explains how the MC68230 interface/timer chip makes the most of the SCSI peripheral bus compared with simple microprocessor interface chips.
Motorola AR224 (9pp)

9 **“System 65 Bus Interfacing”**
(R6500)
This note aids users designing their own modules for the System 65 bus. Descriptions of bus signals, drive capabilities, loading, and timing are included.
Rockwell No. 240 (4pp)

I/O (cont)

10 **“TMP Dynamic RAM Interfacing”**
(TMP)
Describes the techniques for interfacing the TMP video controller to dynamic RAM.
National Semiconductor AN355 (5pp)

11 **“TMS 4500A/6809E Interface”**
(TMS4500A, 6809E)
Describes a circuit configuration that interfaces the 6809E microprocessor to dynamic RAM memory via the TMS4500A-20 dynamic RAM controller. The memory array is 32K bytes deep and uses the TMS4416 16Kx4 dynamic RAM. The output enable function of the TMS4416 is used to allow late write operation of the memory without the need of external bus buffers.
Texas Instruments SMCA005 (8pp)

12 **“TMS4500A DRAM Controller Configured for the TMS99000 Series 16-Bit Microprocessors”**
(TMS4500A)
Describes two memory system configurations showing how the TMS4500A can be configured to work with the TMS99000. A memory mapping scheme is provided that is flexible enough to work with many microprocessor applications using the TMS99000 without modification.
Texas Instruments SMCA003 (12pp)

13 **“TMS4500A/6502 Interface”**
(4500A, 6502)
Presents a circuit configuration using the TMS4500A dynamic RAM controller to interface the 6502 microprocessor to a dynamic memory array. The memory array is 32K bytes deep and features the TMS4416 16Kx4 dynamic RAM. The output enable function of the TMS4416 is used to allow late write operation of the memory without the need for an external data bus buffer.
Texas Instruments SMCA004 (6pp)

14 **“TMS4500A/8088 Interface”**
(TMS4500A, 8088)
Presents a circuit configuration to interface dynamic memories to the 8088 microprocessor using the TMS4500A dynamic RAM controller. The memory array is implemented with TMS4416 dynamic RAMs for increased modularity.
Texas Instruments SMCA006 (8pp)

15 **“TMS4500A/MC68000 Interface”**
(TMS4500A, MC68000)
Discusses several circuit configurations interfacing three speed ranges of the MC68000 microprocessor to dynamic RAM memory via the TMS4500A-15 dynamic RAM controller. The MC68000-8 and MC68000-10 operate with one wait on normal memory access cycles. The memory array is organized as 32K words utilizing the TMS4416 arranged as two rows of 16Kx16 bits.
Texas Instruments SMCA008 (16pp)

16 **“The MC68230 Parallel Interface/Timer Provides an Effective Printer Interface”**
(MC68230, MC68000)
This application note describes a parallel interface/timer interfaced with a Printronix Model 300 printer using the industry-standard Centronics interface.
Motorola Semiconductor AN-854 (6pp)

MICROPROCESSOR

I/O (cont)

1 **"The Video Display Generator as a Color Television Interface"**
(MC6847, MC1372)
Describes two ICs that convert a television display into an active, intelligent terminal when used with an MPU, some memory devices and about a dozen passive discrete components.
Motorola Semiconductor AN-822 (18pp)

2 **"Understanding the CDP1851 Programmable I/O"**
(CDP1851)
Outlines the operating and interrupt modes and the timing requirements of the CDP1851 general-purpose programmable I/O device. Two sample applications are included.
RCA ICAN-7063 (6pp)

4 **"Use of the CDP1852 8-Bit I/O Port with RCA Microprocessor Evaluation Kit CDP18S020"**
(CDP1852)
Describes several applications of the CDP1852 I/O Port and specifically explains its use in the CDP18S020 Evaluation Kit.
RCA ICAN-6538 (4pp)

5 **"Use of the CDP1854 UART with RCA Microprocessor Evaluation Kit CDP18S020 or EK/Assembler-Editor Design Kit CDP18S024"**
(CDP1854)
Describes several methods of interfacing the CDP1854 with the CDP1802 microprocessor and specifically explains the use of the CDP1854 in the CDP18S020 and CDP18S024 Kits.
RCA ICAN-6632 (6pp)

6 **"Using Dynamic RAM with Series 32000 CPUs"**
(3200)
Gives the results of a timing analysis for two DRAM interfaces: one built from off-the-shelf components and one using specialized high-speed circuitry.
National Semiconductor AN-405 (7pp)

7 **"Using High-Speed CMOS Logic for Microprocessor Interfacing"**
(MC54HC240, MC54HC241, MC54HC242, MC54HC243, MC54HC244, MC54HC245)
Explores the possibility of using high-speed CMOS devices in microprocessor systems where LSTTL, because of its speed, has generally been used. Includes a discussion of the digital logic needs of a microprocessor system.
Motorola Semiconductor AN-868 (18pp)

8 **"Using Interface Circuits in Microprocessor Systems"**
(8T26A, 8T28, 8T95)
Discusses a wide range of quad transceivers, hex buffers, octal transceivers, quad buffers, flip flops, and latches and their use as interface ICs for microprocessor systems.
Signetics AN-200 (17pp)

9 **"Using R65XX Family Peripheral Devices with the Z80 CPU"**
(R6522, R6545, R6520, R6551)
Presents one approach to interfacing the Z80 bus to the R6522 Versatile Interface Adapter, R6545 CRT Controller, R6520 Peripheral Interface Adapter, and R6551 ACTA.
Rockwell No. 287 (4pp)

I/O (cont)

10 **"Using the CRT5037 VTAC for a 512 x 512 Dot Matrix"**
(CRT5037)
Describes the design of dot-graphic terminals using CRT controllers. Includes a detailed example of a 512 x 512 dot graphic terminal.
Standard Microsystems AN1-4 (8pp)

11 **"Using the MP8418 Microcomputer Analog I/O System"**
(MP8418)
Discusses theory and application of a board-level data acquisition system that interfaces with the Intel Multibus. Includes troubleshooting software for system checking.
Burr-Brown AN-95 (12pp)

12 **"Using the Z89 SIO in Asynchronous Communications"**
(Z80-SIO)
Describes the use of the Z80-SIO controller in asynchronous communications in both polled and interrupt environments. Software requirements and with sample programs are given.
Zilog Microprocessor Applications Reference Book 2-47 (23pp)

"Z80 Interfacing Techniques for Dynamic RAM"
(See listing under (Memory) RAMs. (Mostek)

13 **"Z80 Interfacing Techniques for Dynamic RAM"**
(MK4027, MK4116)
Provides examples of ways to interface 16-pin dynamic RAMs to the Z80. Z80 timing and memory control signals, as well as interface circuits, are described.
Mostek 1982/83 Z80 Designers Guide V-7 (16pp)

"Z8000 Memory Interfacing Techniques"
(See listing under (Memory) RAMs. (Mostek)

Programming

14 **"12-Bit Addressing with the Z8600 Series Family"**
(Z8600)
Shows how to use 12-bit addressing to manipulate data in the internal program memory, external program memory and the external data memory of a Z8600-based system.
Zilog (2pp)

15 **"8080/8085 Assembly Language Programming Manual"**
(8080A, 8085A)
Primarily a reference manual, this manual describes the 8080/8085 instruction set, assembly language concepts, assembler directives, macros, programming techniques and interrupts.
Intel $10.00 (210pp)

16 **"A Methodology for Programming COSMAC 1802 Applications Using Higher-Level Languages"**
(COSMAC 1802)
Discusses a method for optimizing time-critical portions of programs written in higher-level languages for COSMAC 1802 applications by recoding those portions in assembly language.
RCA ICAN-6918 (4pp)

17 **"A Microprogram Development System"**
(IMP-16)
Describes the application of microprogramming to LSI processors and the advantages of a microprogram development system for hardware and software.
National AN-123 (6pp)

18 **"A Microprogrammed CPU Using AM29116"**
(AM29116)
Shows techniques for designing a high-performance CPU using the AM29116 16-bit bipolar microprocessor.
Advanced Micro Devices MPR-919 (16pp)

MICROPROCESSOR

Programming (cont)

1 **"A Primer on Microprogramming and Bit-Slice Architecture Exemplified in Systems Using Members of the EPIC (Emulation and Programmable IC) CMOS/SOS Family"**
(GP001, GP502)
Defines the concepts of microprogramming and bit-slice architecture, outlining advantages, limitations, and applications. The functional elements of a microprogrammed bit-slice system are examined individually and then tied together in a hypothetical 16-bit computer.
RCA ICAN-7226 (10pp)

2 **"AIM 65 Program Timer"**
(R6500)
As an alternative to counting instruction cycle times in a program, this note presents a routine that will measure the execution time of a program up to 65,535 microseconds long.
Rockwell No. 274 (4pp)

3 **"An Introduction to RIO Text Processing"**
Presents for the beginning microcomputer user an introductory overview of the fundamentals of Relocatable Modules and Input/Output Management.
Zilog AN1 (24pp)

4 **"An Introduction to Software Development on the CIM System"**
(CIM804)
Intended for the first-time user of a CIM operating under CP/M, this note covers the entire process from writing the source code to burning the software onto a PROM.
National Semiconductor AN-403 (18pp)

5 **"Binary Synchronous Communication Using the Z80 SIO"**
(Z80)
Discusses design considerations for using the Z80 SIO for implementing communication protocol for information exchange between data-processing devices.
Zilog Microprocessor Applications Reference Book 2-83 (4pp)

6 **"CBUG05 Debug Monitor Program for MC146805E2 Microprocessor Unit"**
(MC146805E2, MCM65516)
CBUG05 is a debug monitor program written for the MC146805E2 microprocessor unit and contained in the MCM65516 ROM. CBUG05 allows for rapid development and evaluation of hardware and M6805 Family software, using memory and register examine/change commands as well as breakpoint and single instruction trace commands.
Motorola Semiconductor AN-823A (42pp)

7 **"CBUG05 Debug Monitor Program for the CDP6805E2 Microprocessor Unit"**
(CDP6805E2)
Describes a debug monitor program contained in the CDP65516 ROM which allows for rapid development and evaluation of hardware and 6805 family software.
RCA ICAN-7201 (40pp)

8 **"CDP1802 Microprocessor-Based Setback Thermostat"**
(CDP1802)
Covers the design of a programmable, setback thermostat circuit for controlling heating and air-conditioning systems.
RCA ICAN-6901 (7pp)

9 **"COSMAC Software Development Program on GE Mark III Time Sharing System"**
(CDP 1802)
Describes the COSMAC Software Development Packages (CSDP) available for the GE Mark III time sharing system. Briefly covers the assembler and the simulator debugger which make up the package.
RCA ICAN-6656 (4pp)

Programming (cont)

10 **"How To Use Fortran with Other Intel Languages"**
Shows how to link together program modules comprised of Fortran, PL/M and assembly language; example application is included.
Intel AP-44 (22pp)

11 **"IMP-16 Programming Techniques"**
(IMP-16)
Discusses several aspects of the instruction set to enable programmer to code more efficiently. Includes discussion of subroutines, subroute parameter passing, recursive subroutines, as well as sample programs.
National AN-111 (6pp)

12 **"ISIS-II System Calls"**
Discusses how ISIS routines facilitate program generation by providing interface functions such as program I/O, diskette directory maintenance and program loading and execution routines.
Intel AP-80 (20pp)

13 **"Inter-Intellec Communications"**
(Intellec Series II)
Illustrates how to establish a communications link between two Intellec Series II development systems to allow file transfer and increased program development flexibility.
Intel AP-81 (30pp)

14 **"Interfacing 8500 Peripherals to the Z80"**
(Z80)
Describes hardware interface requirements and interrupt structure of 8500 series peripherals in a Z80 system.
Zilog Microprocessor Applications Reference Book 2-97 (5pp)

15 **"Interfacing PLM Code to CDOS System Functions"**
Describes an array of PLM procedures and supportive macro definitions for interfacing PLM programs to CDOS system functions; includes example program.
RCA ICAN-6928 (6pp)

16 **"Letting the MC68702 Program Itself"**
(MC68701)
Describes how the MC68701 MCU controls data flow to an on-chip EPROM and gates programming power during programming with the help of only a few external devices.
Motorola Semiconductor AN-832 (8pp)

17 **"M6800 Microprocessor Programming Manual"**
(MC6800)
Provides information needed to program the unit, discusses the instruction set, source language, assembler, simulator, Build-Virtual-Machine and HELP program. Gives programs examples.
Motorola $10.00 (303pp)

18 **"MC68705P3/R3/U3 8-Bit EPROM Microcomputer Programming Module"**
(MC68705P3, MC68705Rs, MC68705U3)
Contains a schematic diagram and instructions for programming the MC68705P3/R3/U3 EPROM microcomputers. Includes a parts list and parts layout.
Motorola Semiconductor AN-857 (4pp)

MICROPROCESSOR

Programming (cont)

1 **"MCS-48 and UPI-41 Assembly Language Manual"**
(8041, 8048, 8741, 8748, MCS-48, UPI-41)
Describes the assembly language for programming the MCS-48 and UPI-41 single device microcomputers. Covers procedures and controls for operating the assemblers to translate the source file into object code.
Intel $10.00 (192pp)

2 **"Memory-Mapped vs Explicit I/O"**
(Z8000)
Compares two approaches to the addressing of microprocessor I/O transactions: the memory-mapped I/O of the 68000 and the explicit I/O scheme of the Z8000.
Zilog Microprocessor Applications Reference Book 3-61 (2pp)

3 **"Microprogram Design with the AM2900 Family"**
(AM2900)
Covers one of the more difficult areas of microprogramming a computer—the transformation of machine op codes into microinstruction addresses and data words. Implementation examples are included with emphasis on the use of the 2900 family.
Advanced Micro Devices (Naval Ocean Systems Center Technical Note 178) (10pp)

4 **"Microprogramming Handbook"**
(2911, 2909, 29811, 2922, 29803)
Discusses microprogramming a bipolar processor. Includes sections on microprogram memory, sequencing, branching, jumping, and subroutines.
Advanced Micro Devices, $5.00 (44pp)

5 **"OS3.1 Monitor ROM and Macro Assembler/Linking Loader"**
(OS3.1, R6500/11, R6500/41, M65-651-3)
Discusses updates to the System 65 debug monitor/editor assembler.
Rockwell AN-2129 (2pp)

6 **"PL/M-80 Programming Manual"**
(8080, PL/M-80)
Provides in readable format a complete description of the PL/M language as implemented by the PL/M-80 compiler.
Intel $10.00 (134pp)

7 **"Partitioning a Basic-M Source Program"**
(XDOS)
Describes how to partition a source program into several separately compiled modules that can reside in ROMs in the final environment. Outlines user-program design constraints and illustrates the assembly routine for calling one module from another.
Motorola Semiconductor AN-813 (6pp)

8 **"Preparing an AIM 65 BASIC Program for PROM/ROM Operation"**
(R6500)
Describes a method of preparing a BASIC program for operation in a (P)ROM in the AIM 65. A program executing address DOOO-DFFF is illustrated, as are relocator and driver support programs.
Rockwell No. 241 (4pp)

9 **"Programming the MC1468705G2 Microcomputer EPROM"**
(MC1468705G2)
Provides information for programming early mask-set versions of this EPROM single-chip microcomputer. Includes a schematic diagram of a circuit with simple jumpering, which can be used when programming devices with any of the mask-set versions.
Motorola Semiconductor AN-907 (10pp)

Programming (cont)

10 **"R6500 Software Preparation System Development Configurations"**
(R65C02)
Introduces a low-cost development system for the R6500 family of CMOS CPUs. Four configurations are illustrated.
Rockwell AN-2166 (8pp)

11 **"S2000 Software Routines: Keyboard Entry, LED Display, Software Timing and Sound Generation"**
(S2000)
Describes software program that demonstrates capability of the S2000 single-chip MCU.
Gould AMI (8pp)

12 **"S2000/S2150 Single-Chip Microcomputer Positive BCD Integer Arithmetic Routines"**
(S2000/S2150)
Offers software routines for performing positive BCD integer arithmetic operations with the S2000/S2150 MCU.
Gould AMI (20pp)

13 **"SC/MP NIBL ROM Hardware Implementation"**
Shows the design of the RAM and ROM memories needed to implement National's Industrial Basic Language on the SC/MP LCDS.
National AN-204 (2pp)

14 **"Segmented vs Linear Addressing"**
(Z8000)
Compares two approaches used for addressing microprocessor memory: the segmented addressing method of the Z8000 and the linear addressing method of the 68000.
Zilog Microprocessor Applications Reference Book 3-65 (9pp)

15 **"Self-Programming the MC68701 and the MC68701U4"**
(MC68701, MC68701U4)
Explains how the MC68701/U4 EPROM versions of the M6801 microcomputer family can program themselves. Also describes a fully tested self-programmer including software and 1:1 artwork.
Motorola AN-906 (12pp)

16 **"Serial Clock Generation Using the Z8536 CIO"**
(Z80, Z8536)
Describes the use of a counter/timer I/O device for generating bit-rate clocks for asynchronous communications in a Z80-based system.
Zilog Microprocessor Applications Reference Book 2-103 (4pp)

17 **"Serial Communication with the Z80 DART"**
(Z80, Z8470)
Covers hardware and software considerations for using the Z80 DART, an IC that provides two independently programmable, asynchronous communication channels for a Z80-based system.
Zilog Microprocessor Applications Reference Book 2-87 (9pp)

18 **"Signetics Micro Assembler Reference Manual"**
(N3002, 8X02)
Describes this FORTRAN program developed as a design tool for writing microprograms. This microprogram defines its own assembly language, writes the microprogram, then assembles it to generate tapes to load memory. Program is suitable for most microprogrammed applications.
Signetics $4.00 (74pp)

Programming (cont)

1 **"Software Control of Microprocessor-Based Realtime Clock"**
(CDP1802)
Shows how to use software to implement a 12-hr clock, 4-yr calendar and a 12-hr elapsed time indicator with a microprocessor-based timing system.
RCA ICAN-6677 (9pp)

2 **"Starplex's "Submit Utility" Speeds Program Development"**
(Starplex)
Illustrates how the Submit utility program increases programming speed and accuracy.
National Semiconductor SB SPX-AP-8 (7pp)

3 **"The Z80 Family Interrupt Structure"**
(Z80)
Describes the Z80 interrupt structure, which includes one non-maskable and three software maskable interrupt modes. Provides flow charts, timing diagrams, and circuit diagrams.
Zilog Microprocessor Applications Reference Book 2-23 (12pp)

4 **"Using the Z80 SIO with SDLC"**
(Z80)
Covers the use of the Z80 SIO with synchronous data-link control communication protocol.
Zilog Microprocessor Applications Reference Book 2-71 (12pp)

5 **"Z8000 CPU Programmers Guide"**
(Z8000)
Demonstrates how the features of the Z8000 can be used to solve typical software problems. Specific programming techniques are offered, and a variety of complete programs are presented.
Zilog (54pp)

Systems

6 **"2670/71/72/73 CRT Set Application Briefs"**
(2670, 2671, 2672, 2673)
Gives details on a CRT terminal controller constructed from as few as 15 packages, including a standard microcomputer, memory, and an LSI chip set.
Signetics AN-403 (8pp)

7 **"80C86 Static Circuit Design Advantages"**
(80C86)
Explains the advantages of the CMOS 80C86 CPU and peripheral support circuits over the NMOS versions.
Harris DS-2 (1pp)

8 **"80C86 System Overview"**
(80C86)
Describes members of a CMOS family of chips consisting of a 16-bit CPU, programmable interval timer, programmable peripheral interface, priority interrupt controller, octal latch, clock generator and driver, and bus controller.
Harris DS-1 (5pp)

9 **"82C82 Eases Mixed System Design"**
(82C82)
Addresses 82C82 features that simplify system design, including its TTL-compatible input specifications, gated inputs, and consistent output load capacitance ratings.
Harris TB-48 (3pp)

Systems (cont)

10 **"A 16-bit Microprogrammable Bit-Slice Computer Design Using the GP001 CPU and GP502 Controller from the EPIC Family"**
(GP001, GP502)
Presents a practical implementation of microprogramming and bit-slice architecture using EPIC family parts. Discusses the use of development aids for hardware and software debugging.
RCA ICAN-7241 (17pp)

11 **"A CDP1800-Based CRT Controller"**
(CDP1800, CDP1809, CDP1870, CDP1876)
Discusses the application of the RCA two-chip video interface system to a CRT controller system.
RCA ICAN-7038 (8pp)

12 **"A Counter/Timer for COSMAC Systems"**
(CDP18S005, CDP18S007, CDP18S008)
Describes a counter/timer that can be built and used in conjunction with COSMAC development systems or any system using the COSMAC Microboard Universal Backplane. The counter/timer can be used to determine how much time a program is spending in a particular area of code.
RCA ICAN-6907 (8pp)

13 **"A Data Communications System Using an MC6809 MPU, MC68652 MPCC, and/or the MC68661 EPCI"**
(MC68009, MC68652, MC68661)
Describes hardware considerations for interfacing the MC68661 Enhanced Programmable Communications Interface and the MC68652 Multi-Protocol Communications Controller with the MC6809. Test software is included to illustrate the use of MC6809 instructions to operate both devices.
Motorola Semiconductor AN-839 (12pp)

14 **"A Guide to the Selection of Support Components for the Series 3000 Microprocessor"**
(N3001, N3002)
Categorizes the various components used to implement major sections of a typical microprocessor system.
Signetics AM-1 (4pp)

15 **"A Low-Cost MOS/LSI-Based "Smart" CRT Terminal"**
Offers a software listing for a low-cost smart terminal design using state of the art MOS/LSI circuits.
Standard Microsystems AN3-2 (16pp)

16 **"A Microcomputer System Bus Technical Comparison"**
Compares the VME bus and Multibus II, the VMX bus and iLBX II, and the VMS bus and iSSB. Covers protocols, arbitration, interrupt handling, and utilities.
Motorola Semiconductor BR172 (64pp)

17 **"A Minimal S6802/S6846 Systems Design"**
(S6802, S6846)
Presents a minimal prototyping system design using the devices.
Gould AMI AN-79-68-02 (3pp)

"A PROM Programmer for the SC/MP LCDS"
See listing under (Memory) PROMs (National)

18 **"A Programmer's Guide to the Z8 Microcomputer"**
(Z8)
This note describes the important features of the Z8, with software examples that illustrate its power and ease of use. Topics include accessing register, program, and external data memory, context switching, bit manipulations, stack operations, interrupts, timer/counter and I/O functions, and arithmetic routines.
Zilog Microprocessor Applications Reference Book 1-35 (25pp)

MICROPROCESSOR

Systems (cont)

1 **"A Simple High Speed Bipolar Microprocessor Illustrates System Design and Microprogram Techniques"**
(MC10801, MC10803)
Describes a complete bipolar LSI systems design using 10 ICs to perform 2's complement add, subtract, multiply and divide.
Motorola AN-774 (12pp)

2 **"A Slave CDP1802 Serial Printer Buffer System"**
(CDP1802)
Describes a CDP1802-based stand-alone line-printer buffer that links a master processor system to a serial printer through an RS232C interface.
RCA ICAN-6991 (8pp)

3 **"A Small Z8000 System"**
(Z80A, Z8002)
Outlines the hardware design implementation of a small computer using the Z8002 microprocessor, ROMs, EPROMs, dynamic RAMs, and parallel and serial I/O devices. The interface requirements of the Z8002 to memory and Z80A peripherals are described, with design alternatives given.
Zilog Microprocessor Applications Reference Book 3-17 (11pp)

4 **"A User's Guide to the Series 3000 Microprocessor Chip Set"**
(N3001, N3002)
Describes devices, instruction sets. Design examples included.
Signetics AM-2 (14pp)

5 **"A Z80-Based System Using the DMA with the SIO"**
(Z80A, Z80A-SIO)
Describes the use of the Z80A-SIO and Z80A-DMA hardware/software in a Z80-based system to transfer data to the SIO via the DMS.
Zilog. Microprocessor Applications Reference Book 2-35 (11pp)

6 **"AM2914 Priority Interrupt Encoder"**
(AM2913, AM2914, AM2900, 9080A)
Provides data sheet information on devices. Outlines construction of a microprogrammable, bipolar, LSI interrupt structure for the 2900 and 9080A processors using the 2914.
Advanced Micro Devices (33pp)

7 **"Advanced Architectural Features of the Z8000 CPU"**
(Z8000)
Describes the organization, memory use, interrupt and trap handling, instructions, and data capabilities of the Z8000 family of microprocessors.
Zilog Microprocessor Applications Reference Book 3-3 (14pp)

8 **"An Introduction to the Z8010 Memory Management Unit (MMU)"**
(Z8010-MMU)
Examines the uses of memory management in computer systems, and explains how the Z8010 MMU supports the Z8001 processor in the use of its large address space.
Zilog Microprocessor Applications Reference Book 3-29 (19pp)

9 **"An M6800 Clock System That Handles DMA and Memory Refresh Cycle Stealing"**
(MC6800, MC6875)
Presents a method for stealing cycles from the MPU for DMA transfers, refreshing memory through cycle stealing, and also providing refresh to an MC6800 dynamic MPU after each cycle stolen. Block diagrams included.
Motorola AN-787 (6pp)

Systems (cont)

10 **"An Optimizing Driver for NEC Spinwriter and Diablo Printers"**
Presents a driver program for NEC and Diablo full character printers. Prepared as a companion to the ZFORM text formatting utility program, it nevertheless suits a variety of applications, especially those for printing long lines of text as in business-oriented data base management systems.
Zilog Microprocessor Applications Reference Book 6-3 (56pp)

11 **"Analog Input/Output for Microprocessors Made Easy"**
(MP10, MP11, MP20, MP21)
Outlines features of devices and describes various ways each can be handwired to suit user configurations. Includes block diagrams of hookups with SC/MP, Z80, F8, 6800, 8080, 8085 and 9002 MPUs as well as discussion of memory mapped vs. accumulator I/O.
Burr Brown AN-87 (6pp)

12 **"Application Memo to Control Store Sequencer 8X02"**
(8X02)
Presents a functional description and gives microprogramming system suggestions.
Signetics Bipolar Application Memo 3 (7pp)

13 **"Application Technique for the 2651 PCI"**
(2651)
Shows application techniques for the 2651 programmable communications interface.
Signetics M26 (2pp)

14 **"Applying the Z80 SIO in Asynchronous Data Communications"**
(MK3884)
Describes the operation of the Z80-SIO in serial asynchronous data links. Programming examples are given for initialization, data transfer and error detection and recovery.
Mostek 1982/83 Z80 Designers Guide V-23 (6pp)

15 **"Architectural Concepts for Microprocessor Peripheral Families"**
(Z8038, Z-SCC)
Discusses local buses as a way of overcoming the constraints of limited available signal lines in 16-bit processors. Focuses on the use of an intelligent FIFO I/O device in a high-speed parallel/serial front-end processor for a high-end microcomputer system.
Zilog Microprocessor Applications Reference Book 3-105 (3pp)

16 **"Basic Microprocessors and the 6800"**
(MC6800)
Introduces microprocessor basics and the M6800 microcomputer system including details of the hardware addressing modes, system configuration, and instruction set. Supplies programming examples complete with flow charts, source program, and assembled output.
Motorola $12.90 (272pp)

17 **"Benefits of Demand Page Virtual Memory"**
(TI32000 family)
Virtual memory is a viable memory management alternative to overlay procedures when using secondary storage. This note covers virtual memory as implemented in the TI32000 system.

MICROPROCESSOR

Systems (cont)

1 **"Bit-Slice Microprocessor Design Takes a Giant Step Forward with "Schottky-Coupled-Logic" Circuits"**
(IDM2900)
Covers a four-bit slice Schottky-coupled-logic design that combines the flexibility of the industry standard 2900 microprocessor architecture with advanced LSI processing.
National Semiconductor AN-203 (12pp)

2 **"Build Your Own Microprocessor-Based Data Distribution System"**
Covers the selection of D/A converters and the logic design for interfacing the converters to a microprocessor's data, address, and control buses.
Micro Networks AN203 (6pp)

3 **"Buildiing an Inexpensive but Powerful Color Terminal"**
(N5455)
Describes a simple, low-cost approach to add color capabilities to the N5455 Terminal Management Processor.
National Semiconductor AN-374 (6pp)

4 **"CDP1800-Based Video Terminal Using the RCA Video Interface System, VIS"**
(CDP1800, CDP1869, CDP1870, CDP1876)
Discusses the application of the RCA Video Interface System to video terminals, industrial displays and broadcast-TV text overlays. Describes hardware and software implementation. Includes schematics, block diagrams, flowcharts, and VIS operating system listing.
RCA ICAN-7032 (36pp)

5 **"CDP1800-Series Multiprocessing for Maximum Performance"**
(CDP1800)
Discusses the mechanics of multiprocessing and gives practical examples of how a CDP1800 CPU can be used in the realm of intelligent control.
RCA ICAN-7079 (10pp)

6 **"CDP1800-Series Peripherals—Building Blocks of a Complete Processor Family"**
(CDP1800)
Discusses an array of auxiliary chips that make available to the system designer the functions and performance levels that were once only achievable with NMOS.
RCA ICAN-7023 (8pp)

7 **"CDP1802-Based Designs Using the 8283 Programmable Counter/Timer"**
(CDP1802)
Describes methods by which the 8283 programmable counter/timer can be incorporated in RCA COSMAC-based microprocessor systems (CDP1802)
RCA ICAN-6693 (4pp)

8 **"CDP1804 and CDP1805 Processors Improve System Performance and Lower Chip Count"**
(CDP1804, CDP1805)
Describes the use of the CDP1804 and CDP1805 processors in extending the capability of the CDP1802, both in higher performance and additional system functions, while maintaining upward software and hardware compatibility.
RCA ICAN-6957 (6pp)

9 **"CMOS User 65 System 65 Development System"**
(R65C00)
Describes the use of the System 65 development system, equipped with a buffer module, for emulating the R65C00 family of CMOS microprocessors.
Rockwell AN-2158 (6pp)

Systems (cont)

10 **"CRT9028 VTLC: A New Video Terminal Logic Controller"**
(CRT9028)
The 9028 CRT controller reduces additional control electronics requirements for a CRT terminal to as few as to five to ten ICs. Describes a typical display system configuration and includes discussions of video timing, display formatting, and display memory access.
Standard Microsystems TN4-5 (6pp)

11 **"Cassette Tape I/O for COSMAC Microprocessor Systems"**
(CDP18S020, CDP18S024, CDP18S025, CDP18S005, CDP18S007, CDP18S691)
Describes circuit and software for adding cassette-tape I/O to the COSMAC evaluation kit and development system, or the Microboard prototyping kit.
RCA ICAN-6934 (4pp)

12 **"Clock-Hold Schemes for the IMP Microprocessor Family"**
(IMP-8C, IMP-16C)
Presents scheme to extend the clock-hold function for additional periods of the main system clock, using the DM8570 shift register.
National AN-105 (4pp)

13 **"DMA Interconnection to the 8003 EDLC"**
(8001, 8003)
Discusses DMA design considerations in an Ethernet node for achieving the right balance between cost and performance, flexibility and simplicity for different system requirements.
SEEQ AN-6 (7pp)

14 **"DP8400/8409 Error Correcting Dynamic RAM Memory System for the Series 32000"**
(NS32016, DP8400, DP8409, DP8419)
Describes an error correcting memory system for the Series 32000 microprocessors using three programmable logic arrays to interface between the NS32016, DP8409 and DP8400.
National Semiconductor AN-387 (16pp)

"Data Acquisition System Interface to Computers"
See listing under (Interface) Converters (National)

15 **"Debugging a 32032 Based System with an ISE/16"**
(32032)
Explains how an ISE/16 and simple adapter can be used to debug a 32032-based system.
National Semiconductor AN-396 (8pp)

16 **"Design Considerations for the Ethernet Node"**
(AmZ8001, Am7990, Am7991)
An introduction to Ethernet, covering software support, system interfacing, initialization, diagnostics, interrupt service latency, and transmit/receive driver routines.
Advanced Micro Devices Analog and Communications Products Data Book (14pp)

17 **"Design of Clock Generators for Use with RCA COSMAC Microprocessor"**
(CDP1802)
Describes a crystal controlled clock generator using on-chip circuits and crystal and RC generators using external circuits.
RCA ICAN-6565

18 **"Designing Microcomputer Systems for Electrically Noisy Environments"**
Describes some electrical noises and noise environments. Reviews design techniques that reduce noise susceptibility, including layout, power supply distribution and decoupling, and shielding and grounding techniques. Automotive and ESD environments are emphasized.
Intel AP-125 (24pp)

MICROPROCESSOR

Systems (cont)

"Device Operation and System Implementation of the Asynchronous Communications Interface Adapter MC6850"
See listing under (Interface) Data Transmission (Motorola)

1 **"FDC9216 Floppy Disk Data Separator"**
(FDC9216)
Explains the functions of a data separator and the theory of operation of the FDC 9216/B. FM and MFM encoding schemes are illustrated, as are two system configurations using the 9216: one with the FDC 179X floppy disk formatter controller; one with the NEC 765 floppy disk controller. Includes test results for the 9216 used with 5¼-inch and 8-inch floppy disk drives.
Standard Microsystems TN6-1 (11pp)

2 **"Fine Tuning the ALU Carry Path"**
(DM74S182)
Provides a look at higher speed look-ahead carry techniques. Covers four basic methods (ripple carry, single level, multilevel, shifted) and examines factors affecting choice of technique.
National AN-230 (7pp)

3 **"Floppy Disk Controller"**
(8X330)
Describes hardware and software of a floppy-disk controller design that demonstrates the capabilities of the 8X330 floppy disk formatter/controller.
Signetics

4 **"Floppy Disk Drive Controller Design Considerations Using the MB8876A/MB8877A"**
(MB8876A, MB8877A)
A comprehensive description of the MB8876A and MB8877A floppy disk drive controllers, including interfaces registers, register selection, error detection, command structure, formatting techniques, encoding, and write precompensation.
Fujitsu Microelectronics AN-002 (18pp)

5 **"General Purpose Interface Adapter"**
(S68488)
Defines limitations and characteristics of a general-purpose interface adapter and discusses software considerations for interfacing with the IEEE488-1978 standard instrument bus.
Gould AMI (3pp)

6 **"Generating Non-Standard Baud Rates with R6551"**
(R6551)
Describes how the R6551 can be used to generate baud rates other than 15 selectable ones specified for the device.
Rockwell Document No. 6500 No. 3 (2pp)

7 **"How to Simplify Design Integration of Microprocessor-Based Systems Using the Event Monitor System"**
(ES-SERIES)
Describes use of the ES Series Emulator to diagnose and debug complex integration problems. Several sample problems are given.
Applied Microsystems Corp. (9pp)

8 **"IDM2901A File Expansion Using the DM85S68"**
(DM85S68, IDM2901A)
Discusses file expansion for the μP using a register array.
National Memory Applications Handbook (1pp)

9 **"IMP-16L DMA—What It Is and How to Use It"**
(IMP-16)
Discusses general theory of the DMA Bus, gives examples of priority expansion and data transfer.
National AN-135 (6pp)

Systems (cont)

10 **"Increasing the Number of Control Flags and Jump Conditions in the IMP-16C"**
(IMP-16C)
Describes simple and economical method of increasing the number of testable jump conditions and the number of control flags on the IMP-16C microprocessor.
National AN-101 (4pp)

11 **"Intel Multibus Interfacing"**
Provides an overview of the Multibus system bus, including an examination of bus signals, operating characteristics, and interface circuits. A complete description of a slave design example is included.
Intel AP-28A (39pp)

12 **"Interface Techniques for the 2651 PCI"**
(2651)
Covers interfacing the 2652 programmable communications interface with the SC/MP, Z80, 8085, and 6800 microprocessors.
Signetics M22 (8pp)

13 **"Interfacing Mostek's MDX-PIO to OPTO-22's PB24"**
(MDX-CPU2, MDX-PIO)
Shows how to interface a microcomputer system to an OPTO-22 PB24, a 24-channel I/O panel using solid-state relays.
Mostek Applications Brief (8pp)

14 **"Interfacing the 8001/8003 EDLC to a 16-Bit Bus"**
(8001, 8002, 8003)
Explains the data link and physical layers of the Ethernet protocol as implemented by an Ethernet data link controller chip and a Manchester code controller chip.
SEEQ AN-5 (7pp)

15 **"Low Cost Crystal Oscillator for Clock Input"**
(R6500)
Describes a low cost oscillator circuit which produces the baud input frequency required by the clock generator circuits in the R650X series microcomputers. The circuit uses one of two readily available low cost crystals. Circuit diagram.
Rockwell Document No. 1 (1pp)

16 **"Low-Cost, High-Performance Token Pass LAN Controller"**
(COM9026)
Describes operation of the COM9026, an ARCNET controller chip that makes network configuration and reconfiguration completely transparent to a host. Includes a comparison of ARCNET and ETHERNET networks.
Standard Microsystems TN5-6 (9pp)

17 **"Low-Power System Design with Harris CMOS 80C86 Products"**
(80C86)
Shows how the 80C86 family of CMOS ICs helps eliminate the need for pull-up resistors.
Harris DS-3 (2pp)

18 **"Low-Power Techniques for Use with CMOS CDP1800-Based Systems"**
(CDP1800)
Describes techniques for reducing the power requirements of microcomputer systems.
RCA ICAN-7029 (6pp)

MICROPROCESSOR

Systems (cont)

1 **"M6800 Systems Utilizing the MC6875 Clock Generator/Drive"**
(MC6875)
Gives extensive design examples using the MC6875 in systems including slow or dynamic memories, and DMA (multiprocessor) applications.
Motorola AN-775 (20pp)

2 **"MC14500B Development System"**
(MC14500B)
Describes the design and construction of an easy-to-use development system that provides keyboard data/address entry, wide supply voltage range, seven-segment readout, and accommodation of 256 program steps.
Motorola AN-889 (8pp)

3 **"MC6801/03 Port Expansion"**
(SN74LS374, MC6821, SN74LS163, SN74LS154, SN74LS175, SN74LS377, SN74LS165)
Shows various methods for expanding I/O capability of the MC6801/03 microcomputers using various peripheral chips.
Motorola AN-797 (8pp)

4 **"MCS-51 Microcomputer User's Manual"**
(8051, 8751, 8031)
Describes system architecture, instruction set and software; includes applications examples and data sheets.
Intel (448pp) $7.50

5 **"MCS-85 User's Manual"**
(8085, MCS-85)
Describes this 8085 based system and peripheral components. Extensive coverage through data sheets.
Intel $5.00 (273pp)

6 **"MIL-STD-1553A and MIL-STD-1553B Overview"**
(COM1553, COM1553B)
A tutorial note on the DOD's Aircraft Internal Time Division Command/Response Multiplex Data Bus communications protocol. Includes a brief description of two VLSI ICs that implement the protocol.
Standard Microsystems TN5-3

7 **"MM58167A Real Time Clock Design Guide"**
(MM58167A)
Covers operating issues of a real-time 24-hour clock, including hardware interface to microprocessors, calibration techniques, software and battery backup.
National Semiconductor AN-353 (18pp)

8 **"MN1400 Series 4-Bit One-Chip Microcomputers User's Manual"**
(MN1400, MN1402, MN1498, MN1499)
Introduces the MN1400 family. Encompasses system architecture, timing, and the instruction set including examples of various commands and routines.
Panasonic (65pp)

9 **"Memory Management Techniques Using the MC6829"**
(MC6829, MC6809)
Describes an MC6809-based system in which an MC6829 memory management unit is used to increase the memory capacity of the system to a maximum of 2M bytes. With the mapping RAM technique described, data can be written to sequential addresses that correspond to the upper N bits of an expanded address. Includes block diagrams, timing diagrams and tables.
Motorola Semiconductor AN-859 (48pp)

Systems (cont)

10 **"Microcomputer Applications Handbook"**
Provides application hardware and software information for the entire microcontroller line, which includes both the MCS-48 and the MCS-51 families.
Intel $7.50

11 **"Microprocessor Systems Handbook"**
Explains μP hardware, the interaction of hardware and software, and the interfacing of μP's with A/D and D/A converters. Topics covered include memory addressing, I/O operations, and applications of various microprocessors.
Analog Devices $9.50 (218pp)

12 **"Minimum System Design TMS 9900 16-Bit Microprocessor"**
(TMS9900)
Explains system design, system performance, and minimum system configuration.
Texas Instruments Application Report CA-184A (7pp)

13 **"Minimum System Design with the S9900 16-bit Microprocessor"**
(S9900)
Describes device and basic system configuration. Includes timing and block diagrams.
Gould AMI AN-79-99-02 (6pp)

14 **"Monitor for the MC146805G2L1 Microcomputer"**
(MC146805G2L1)
The MC146805G2L1 ROM contains a monitor routine that provides the user with the ability to evaluate the microcomputer using a standard RS232 terminal. The user can enter short programs into the on-chip RAM and execute them via the monitor. A description of the monitor program is given along with an assembled listing of the actual program.
Motorola Semiconductor AN-852 (16pp)

15 **"Multi-Processor Controller Using the MC6809E and the MC68120"**
(MC6809E, MC68120)
Two alternatives for providing additional throughput in developing any microprocessor system include single processor and multi-processor. This note investigates both alternatives and describes a basic multi-processor system.
Motorola Semiconductor AN-850 (20pp)

16 **"N8080 System Design Manual"**
(INS8080A, DP8212, DP8216, DP8224, DP8226, DP8228, DP8238, INS8251, INS8255)
Describes the INS8080A μP including architecture, timing, data and instruction representation, and I/O operation and control. Also covers use of various support chips.
National $5.00 (72pp)

17 **"New CMOS CDP1800-Series Processors Enhance System Performance"**
(CDP1800)
Reviews the features of the CDP1800 Series processors and discusses the attributes of the CDP1804 and CDP1805 microprocessors.
RCA ICAN-6971 (6pp)

18 **"New CMOS CDP1800-Series Processors Reduce Chip Count"**
(CDP1800, CDP1804)
Combining CPU, memory, and peripheral functions on a single chip, the CDP1804/1805 can provide a compact system design along with battery operation.
RCA ICAN-6968 (4pp)

MICROPROCESSOR

Systems (cont)

1 **"Next Generation CRT Systems"**
(CRT9007, CRT9006, CRT9212, CRT9021)
Enumerates the benefits brought to new-generation CRT systems by a video processor and controller, single- and double-row buffer, and a video attributes controller. Schematics for typical configurations are given, and various operating and addressing modes are described.
Standard Microsystems AN4-4 (23pp)

2 **"Number Cruncher (MM57109) Interface to Microprocessor"**
(MM57109)
Describes the MM57109 number cruncher unit which can perform most arithmetic functions found in complex hand-held calculators and interfaces either to a microprocessor or a random logic system. Provides schematics of interface logic and a flow chart for initialization of the device.
National AN-186 (10pp)

3 **"Optimizing Hardware/Software Trade-Offs in RCA CDP1802 Microprocessor Applications"**
(CDP1802)
Presents examples of processor interfaces that minimize external hardware and through programming techniques, minimize speed requirements on the CPU.
RCA ICAN-6704 (10pp)

4 **"Optimizing the iRMX 86 Operating System Performance on System 86/310 and System 86/330"**
(iRMX 86, 86/310, 86/330)
Identifies system configuration options that will improve the overall performance of an operating system at the human interface level. Issues covered include loader buffers, volume granularity of devices, BIOS buffers, device interleave factor, and performance testing.
Intel AP-174 (28pp)

5 **"Peripheral Components for Microcomputers"**
(U250B, U265B, U427B, U180M, U327M, U328M, U338M, U340M, U3040M, U3042M, U3060M, U3070M, U3082M)
Discusses peripheral ICs designed for use with single-chip microcomputers.
AEG-Telefunken SI 6.81 (3pp)

6 **"Power-On Reset/Run Circuits for the RCA CDP1802 COSMAC Microprocessor"**
(CDP1802)
Provides diagrams and discussion of several circuits which enable a power-on reset/run capability for the device.
RCA ICAN-6581 (2pp)

7 **"Product Capabilities Manual"**
(8X300)
Describes the capabilities of the 8X300 microcontroller family in high-speed applications, including computer peripherals, industrial controllers and telecommunications.
Signetics

8 **"Programming and Interfacing to the CRT 9007 VPAC"**
(CRT9007)
Worksheets and schematics are provided for implementing a video terminal using the CRT9007 video processor and controller.
Standard Microsystems AN4-5 (21pp)

9 **"R6531 Address Lines for Contiguous ROM"**
(R6502, R6531)
Describes an 8-bit μC system using seven R6531's (ROM-RAM-I/O-Counter) and a single R6502. The ROMs are designed to be a contiguous block extending from highest address down. Supplies diagrams and table for address line selection.
Rockwell Document No. R6500 No. 6 (2pp)

Systems (cont)

10 **"Register-Based Output Functions for RCA COSMAC Microprocessors"**
(CDP1802, CDP1852)
Describes circuits using the CDP1852 I/O port for outputting information from any of the 16 general purpose scratch pad registers of the CDP1802 microprocessor.
RCA ICAN-6562

11 **"S2000 Family Extended Memory Implementation"**
(S2000)
Shows four method for connecting external memory to members of the S2000 single-chip microcomputer family.
Gould AMI AN-79-2K-01 (3pp)

12 **"SCC in Binary Synchronous Communication"**
(Z8030)
This note examines the implementation of a communications controller in binary synchronous mode with a Z8002 CPU acting as a controller for the Z8030 serial communications controller.
Zilog (10pp)

13 **"Serial I/O, Timer, and Interface Capabilities of the MC68901 Multifunction Peripheral"**
(MC68901)
Illustrates a system utilizing several functions of the MC68901, including USART serial I/O, internal timers to generate a serial I/O baud rate and external interrupts, and general-purpose I/O pins to provide a cassette interface.
Motorola AN896 (10pp)

14 **"Single Chip Multiprocessor Arbiter"**
Describes use of Signetics' Field Programmable Logic Sequencer to provide a convenient and cost effective means for implementing a synchronous arbiter, to control system communication with peripherals, by a single chip.
Signetics AN-007 (8pp)

15 **"Smooth Scrolling with the SCN2675"**
(SCN2674)
Discusses the importance of smooth scrolling and the use of the SCN2674 advanced video display controller for offloading the function from a CPU. Illustrates both single- and dual-region scrolling applications.
Signetics AN-404 (8pp)

16 **"Software Conversion of Analog Outputs to Analog Inputs"**
(MP10, MP11)
Discusses using the devices as an analog input system with diagrams illustrating hookups to the 6800 and 8080. Includes software program for each processor as well.
Burr Brown AN-88 (4pp)

17 **"Software Design for Microprocessors"**
(SBP0400, TMS1000, TMS5501, TMS8080, TMS9900)
Presents basic microprocessor fundamentals. Includes such topics as basic terms, basic machine architecture, instruction sets, and programming. Sample design problems are examined.
Texas Instruments $12.50 (385pp)

18 **"TI32000 Interface to the TI32081 Floating Point Unit"**
(TI32081)
After providing a brief tutorial on floating point concepts, this note examines internal structure, architecture, programming, and instruction set of the TI32081 Floating Point Unit.
Texas Instruments (8pp)

MICROPROCESSOR

Systems (cont)

1 **"TMP Extended Program Memory Application"**
(NS455)
Describes methods for expanding the program memory of the NS455 series Terminal Management Processor (TMP) and discusses software techniques for efficient utilization of the expanded memory. Also describes a video memory address circuit that switches between two or more 8k memory arrays.
National Semiconductor AN-399 (6pp)

2 **"TMP Extended Program Memory Application Note"**
(NS455)
Describes methods for expanding the program memory of the NS455 series Terminal Management Processor (TMP) and discusses software techniques for efficient utilization of the expanded memory. Also describes a video memory address circuit that switches between two or more 8k memory arrays.
National Semiconductor AN-399 (6pp)

3 **"TMS 5501 I/O in TMS 8080A μP Systems"**
(TMS5501, TMS8080A)
Describes operation and use of this input/output controller.
Texas Instruments Application Report CA-185A (18pp)

4 **"TMS9900 Family System Design Manual"**
(TMS9900)
Covers the general operation of TI's TMS9900 16-bit family of microprocessors and peripheral support devices.
Texas Instruments Application Report MP702 (120pp)

5 **"The AM9511/12 Floating Point MPU"**
(AM9511, AM9512)
Discusses device features and command set. Outlines algorithm and error that can be expected from its use.
Advanced Micro Devices (21pp)

6 **"The Bisync Protocol and a Bisync Data Link Between Two MC68000 MPU Based Systems"**
(MC68000, MC68661, MC2661, MC68652, MC2652, MC68653, MC2653)
Describes the hardware and software required to implement a Binary Synchronous Communications (BISYNC) data link between two MC68000 based systems. Includes circuit diagrams and flow charts.
Motorola Semiconductor AN-882 (34pp)

7 **"The M10800 MECL LSI Processor Family—Three Descriptive Articles"**
(MC10800, MC6800)
Presents three articles about the device: "Get the Best Microprocessor Performance"; "The MSP: GTE Sylvania's Microsignal Processor"; "M10800 Microprogrammed Demonstrator". The first examines features of the processor; the second discusses a customer application; and the third describes a demonstrator treated as a peripheral to the M6800 system.
Motorola AN-776 (21pp)

8 **"The MM58174A Real Time Clock in Battery Backed-Up Design Provides Reliable Clock and Calendar Functions"**
(MM58174A)
Explains how to interface the MM58174A real time clock to microprocessors with battery-backed circuits. Includes functional circuit description, troubleshooting tips, and crystal oscillator adjustments.
National Semiconductor AN359 (80pp)

Systems (cont)

9 **"Throughput Considerations in NS455 System Planning"**
(NS455)
The NS455 is a complete video controller that reads in video data, processes it and outputs it to a CRT. The intricate timing relationships inherent in video generation require that a designer have a firm grasp of the fundamentals of NS455 operation to achieve his design objectives. This note discusses the key facets of NS455 operation.
National Semiconductor AB-14 (2pp)

10 **"Timing in an Interrupt-Based System with the Z80 CTC"**
(Z80-CTC)
Details both continuous time-interval operations and single-interval operations performed by the Z80-CTC in a Z80-based system.
Zilog Microprocessor Applications Reference Book 2-107 (11pp)

11 **"Understanding and Using the CDP1855 Multiply/Divide Unit"**
(CDP1855)
Shows how the use of hardware can eliminate complex and slow software routines for performing arithmetic and signal-processing algorithms in 8-bit microprocessor systems.
RCA ICAN-6970 (11pp)

12 **"Use of CMOS RAM CDP1824 with RCA Microprocessor Evaluation Kit CDP18S020"**
(CDP1824)
Describes the CDP1824 and its application in the CDP18S020 Evaluation Kit, and presents examples of how the CDP1824 can be combined with the CDP1831 ROM to form efficient ROM-RAM systems.
RCA ICAN-6537 (4pp)

13 **"Use of CMOS ROMs CDP1831 and CDP1832 With the RCA Microprocessor Evaluation Kit CDP18S020"**
(CDP1831, CDP1832)
Describes the operation and design of CDP1831- and CDP1832-based read-only memory systems in the CDP18S020 Evaluation Kit.
RCA ICAN-6536 (4pp)

14 **"Use of CMOS-SOS RAM CDP1822 with RCA Microprocessor Evaluation Kit CDP18S020"**
(CDP1822)
Describes the CDP1822, its operation, and its application in the CDP18S020 Evaluation Kit.
RCA ICAN-6539 (4pp)

15 **"Use of the CDP1856 and CDP1857 Buffer/Separator in CDP1802 Microprocessor Systems"**
(CDP1802, CDP1856, CDP1857)
Describes use of the CDP1856 and CDP1857 four-bit buffers or separators in the CDP18S020 Evaluation Kit and CDP18C024 E-K/Assembled-Editor Design Kit. Includes functional diagrams.
RCA ICAN-6657 (4pp)

16 **"User Manual for the CDP1802 COSMAC Microprocessor"**
(CDP1802)
Describes the device architecture and its instruction set with examples of each command. Reviews basic programming techniques and supplies timing diagrams.
RCA MPM-201B $5.00 (115pp)

17 **"User's Manual for 8X305 Controller"**
(8X305)
Provides hardware/software details pertaining to the 8X305 microprocessor and its family of supportive parts with emphasis on timing, programming and system interface.
Signetics

MICROPROCESSOR

Systems (cont)

1 **"Using Low-Cost 1 MHz Peripherals in a 2 MHz System with the MC68B09 and the MC68B09E"**
(MC68B09, MC68B09E)
Discusses how to minimize system cost by manipulating 2 MHz MPU access time to accommodate slower peripherals and memories.
Motorola Semiconductor AN-836 (7pp)

2 **"Using NSC-800 & 8085 ISE as Automatic Test Equipment"**
(Starplex)
Discusses techniques for using a microprocessor development system and in-circuit emulators for functional tests on production systems.
National Semiconductor SA SPX-AP-7 (16pp)

3 **"Using SCC with Z8000 in SDLC Protocol"**
(Z8030, Z8000)
Outlining the basics of the SDLC communications protocol, this note explains how to use the Z8030 SCC with a Z8000 CPU to implement an SDLC controller.
Zilog (12pp)

4 **"Using the 2651 with BISYNC"**
(2651)
Details how the 2651 PCI supports IBM's Binary Synchronous Communications protocol.
Signetics M24 (4pp)

5 **"Using the COM8004 for High Data Integrity in Bit-Oriented Protocols"**
(COM8004)
Describes the advantages of the COM7004's 32-bit generating polynomial in cyclic-redundancy-check schemes for error detection in bit-oriented protocols.
Standard Microsystems TN5-1 (5pp)

6 **"Using the COM9026 Local Area Network Controller and the COM9032 Local Area Network Transceiver"**
(COM9026, COM9032)
Presents schematics and the information required to implement the clock generator and cable transceiver for the COM9026 LAN controller. Includes a discussion of transmission media and network topology.
Standard Microsystems TN5-2 (12pp)

7 **"Using the COSMAC Microboard Battery-Backup RAM, CDP18S622"**
(CDP18S622)
Describes circuits, operation and application of an 8-kbyte, CMOS RAM board with on-board rechargeable batteries.
RCA ICAN-6955 (5pp)

8 **"Using the CRT8002 in a Color Display Terminal"**
(CRT8002)
Describes how the CRT 8002 video display-attributes controller, a 2-1 multiplexer, and a pair of octal latches can be used to convert existing monochrome terminal designs for use with eight-color terminals.
Standard Microsystems AN2-2 (2pp)

9 **"Using the MK3807 VCU in a Microprocessor Environment"**
(MK3807)
The MK3807 is a programmable CRT video control unit with the logic functions required to generate all the timing signals for the formatting and presentation of interlaced or noninterlaced video data on standard and nonstandard CRT monitors. This note describes application examples for 80-character by 24-row, 40-character by 12-row, and 256-pixel by 256-pixel graphic displays.
Mostek 1982/83 Z80 Designers Guide V-29 (19pp)

Systems (cont)

10 **"VIS—A Commercially Competitive CRT Controller Chip Set"**
(CDP1802, CDP1869, CDP1870, CDP1876)
Gives an industry-wide comparison of various CRT controllers, and discusses the application of the RCA two-chip video interface system to CRT display applications.
RCA ICAN-7067 (4pp)

11 **"VLSI Circuit Provides Complete Controller for Token-Pass Systems"**
(COM9026)
A discussion of local area network issues and the COM9026 LAN controller chip. Topics include line and network protocols, network configuration and topologies, and the 9026-to-microprocessor interface.
Standard Microsystems TN5-5 (7pp)

12 **"Z-Bus Component Interconnect"**
(Z8000)
Describes the Z-Bus, a high-speed parallel shared bus that links components of the Z8000 family, and discusses bus signals, timing transactions, and interrupts.
Zilog Microprocessor Applications Reference Book 5-3 (15pp)

13 **"Z8 Family Software Framing Error Detection"**
(Z8600)
Describes a simple, low-overhead software method for detecting framing errors in the Z8600 UART microcomputer.
Zilog Microprocessor Applications Reference Book 1-33 (2pp)

14 **"Z80 Interfacing Techniques for Dynamic RAM"**
(Z80, MK4027, MK4116)
Provides specific examples of interfacing 16-pin dynamic memories to the Z80 microprocessor. Includes timing diagrams and refresh information.
Mostek

15 **"Z80 Memory Expansion for the Z800"**
(Z80, Z800)
Describes a way for the Z80 user to increase memory addressing space to 16Mb and incorporate memory protection features while maintaining object code compatibility with application software.
Zilog (12pp)

16 **"Z8000 vs. 68000: Introduction"**
(Z8000)
Outlines the similarities and differences of the Z8000 and 68000 CPUs.
Zilog Microprocessor Applications Reference Book 3-57 (2pp)

17 **"Z8000 vs. 68000: Operating System Support Features"**
(Z8000)
This note explains the importance of operating system support features in microprocessors, and contrasts the design of the Z8000 and 68000 in this area.
Zilog Microprocessor Applications Reference Book 3-75 (9pp)

18 **"Z8000 vs. 68000: Register Architecture"**
(Z8000)
Discusses the different approaches of the Z8000 and 68000 to register architecture: general purpose vs. special purpose registers, pairing vs. telescoping of subregisters, and extensibility of register sets.
Zilog Microprocessor Applications Reference Book 3-59 (2pp)

MICROPROCESSOR

Systems (cont)

1 **"Z8016 Z8000 DTC DMA Translation Controller"**
(Z8016)
Describes the advantages of a DMS transfer controller in high-speed data processing, and explains the interface to Z8000 and 8086 CPUs, as well as peripheral devices.
Zilog (26pp)

2 **"Z8530 and Z8030 SCC Initialization: A Worksheet and an Example"**
(Z8530, Z8030)
This note describes the software initialization procedure for the Z8530 and Z8030 serial communications controllers. In a sample program, the Z8000 initializes the Z8530 for asynchronous operation.
Zilog (8pp)

Systems (cont)

3 **"Z8671 Seven Chip Computer"**
(Z8671)
The Z8671 is a Z8601 single-chip microcomputer with a Basic/Debug Interpreter and Debug monitor preprogrammed into 2 Kbytes of on-chip ROM. This note describes the design of a low-complexity board that runs the interrupter and monitor with an external 4K RAM and 2K ROM.
Zilog (7pp)

MICROCOMPUTER BOARDS

Applications

1 **"A Microcomputer Industrial Control Interface Using I/O Modules"**
(TM990)
Describes Industrial Control Systems with TM990 Microcomputer Modules and 5MT ac/dc Input/Output Modules.
Texas Instruments Application Report MP 716 (20pp)

2 **"Designing Floppy Disk Systems (and a Sample CP/M Implementation)"**
(BLC-8221, BLC-8222)
Reviews theory of floppy-disk operation and describes how to use a floppy-disk drive with intelligent controller boards.
National Semiconductor SA4-8221/22 (54pp)

3 **"Introduction to Microprocessors"**
(TM990/u89)
This microprocessor textbook, based on the TM990/u89 University Board, provides an introduction to microcomputers and assembly language programming. Includes many program examples illustrating instructions, programming techniques, and I/O interfacing.
Texas Instruments (MPB30 Rev.*) $19.95 (570pp)

4 **"Microboard Equipment Control"**
(18S02, CDP18S641, CDP18S644, CDP18S661, CDP18S693)
Describes the use of RCA Microboards in specialized manufacturing-test equipment.
RCA ICAN-7026 (6pp)

5 **"RSC-FORTH Development Board"**
(R65F11, R65F12, F65FR1)
A description and schematic for an RSC-FORTH single-chip microcomputer development board. A PC board layout is also provided, including RS-232 and floppy disk drive interfaces.
Rockwell No. 2162 (12pp)

6 **"Reentrant Programming"**
(TM990)
Describes the use of reentrant software to eliminate the need for providing separate copies of common subroutines for concurrently executing tasks.
Texas Instruments (6pp)

7 **"Scout Naked Mini 4/04"**
Describes the Scout Computer System incorporating the Naked Mini 4/04 processor. Discusses the basic machine, I/O and peripheral devices, and system software.
Computer Automation (272pp)

Applications (cont)

8 **"Software Development Using TM990/302 SDB and TIMBER"**
(TM990)
Covers the development of TM990 Series software with a TM990/302 Software Development Module, and TIMBER, a ROM-based executive program.
Texas Instruments Applications Report MP712 (92pp)

9 **"TM990 Analog Modules Applications Report"**
(TM990)
Describes the general operation of the TM990 Serial Analog modules and the software necessary for control.
Texas Instruments Applications Report MP714 (54pp)

10 **"TM990 Microcomputer Handbook"**
(TM990)
Describes the technical features of the TM990 product line. In addition to CPU, Memory and I/O Interface Modules, the book discusses software products, development systems, the TM99 System Bus, and customer support services.
Texas Instruments (207pp)

11 **"TM990/101M EIA Communications Link"**
(TM990)
Describes the development of a software communications link between the TM990 board, a host computer, and an EIA RS232 interface for software development.
Texas Instruments Applications Report MP705 (52pp)

12 **"Z8002 CPU Small Single Board Computer"**
(Z8002)
This note describes a demonstration system built around the Z8002 and Z-Bus peripherals.
Zilog (13pp)

13 **"iSBC Applications Handbook"**
(iSBC80/40, iSBC80/10B, iSBC80/20-4, iSBC80/24, iSBC80/30, iSBC86/05, iSBC86/12A, iSBC86/14, iSBC86/25, iSBC86/40)
Contains application notes, reliability reports, and reprints of articles on the iSBC single-board computer family. Discusses hardware, software, and industrial control products.
Intel 501315 ($10.00)

14 **"Systems Applications for the G65SC150 Communications Terminal Unit"**
(G65SC150)
Briefly describes a communications terminal unit and its system application, providing sample hardware configurations and software programs.
GTE AN-3009-04-02 (20pp)

INTERFACE

Amplifiers, PG

1 **“PGA's Give Your DAS Designs Autoranging, Wide Dynamic Range”**
Explains how data acquisition systems can utilize programmable-gain amplifiers to offer flexibility and features in a minimum number of packages.
Micro Networks AN204 (5pp)

Converters

2 **“An Evaluation Board for the RCA 41051 and CA3318 8-Bit A/D Converter”**
(41051, CA3318)
As A/D converter designs advance to higher frequencies, layout, bypassing and input-amplifier design become more critical. This note describes a demonstration board that will accept either the RCA 41051 or CA3318 8-bit flash A/D converters.
RCA ICAN-7310 (13pp)

3 **“200 kHz Current-Mode Converter Provides 500W”**
Describes a push-pull converter which develops up to 100A at 5V from a standard 48V input.
Unitrode U-101 (9pp)

4 **“3 IC 8-Bit Binary Digital to Process Current Converter with 4-20 mA Output”**
(REF-01, DAC-08, OP-14)
Delineates the construction of a process current converter operating from −5v and 23v supplies. Complete theory of operation followed by calibration procedures and a detailed parts list are included.
Precision Monolithics AN-21 (2pp)

5 **“A Cookbook Approach to High Speed Data Acquisition and Microprocessor Interfacing”**
Shows how to design a complete data acquisition board with multiplexers, programmable gain amplifiers, track and hold, A/D converter, D/A converter, address decoding, read and write timing and interfacing to a microprocessor bus.
Intersil A020 (20pp)

6 **“A Digital Multimeter That Measures Frequency Using the 9400 F/V Converter”**
(9400)
Shows how to add frequency measurement capability to a low-cost standard DMM by adding an external circuit consisting of a F/V converter, resistors and capacitors.
Teledyne Semiconductor AN-14 (2pp)

7 **“A High-Speed Color-Pallette Memory for the TDC1034 ‘Graphics Ready’ D/A Converter”**
(TDC1034)
Describes the color-pallette method of defining colors and its ability to reduce both display memory requirements and the calculation burden on a pixel data processor.
TRW LSI TP-35 (7pp)

8 **“A Low Cost, Easy-to-Build Successive Approximation Analog-to-Digital Converter”**
(DAC-100, CMP-01)
General discussion of feedback A/D converters. Operation of A/D converter capable of 8-bit conversions in 6 μs. The system is expandable to 10-bit resolution. It uses DAC-100, CMP-01, and a successive approximation register.
Precision Monolithics AN-11 (8pp)

Converters (cont)

9 **“A Low Cost, High-Performance Tracking A/D Converter”**
(DAC-100, CMP-01)
Basic operation of 8-bit tracking converter that uses DAC-100 series 10-bit D/A converter, CMP-01 series comparator, and 4-bit MSI up/down counters.
Precision Monolithics AN-6 (8pp)

10 **“A Monolithic 16 Bit D/A Converter”**
(HI-DAC16)
Discusses applications and interface considerations for the HI-DAC16 D-A Converter.
Harris Semiconductor AN539 (5pp)

11 **“A −55°C to +200°C 12-bit Analog-to-Digital Converter”**
(ADC10HT)
Presents design details of the ADC10HT, a 12-bit successive approximation hybrid A/D converter that operates over a −55°C to +200°C temperature range. The results of a 1000-hour life test are included.
Burr-Brown AN-112 (7pp)

12 **“AD DAC80 Reliability Predictions”**
(ADDAC80)
Describes model for calculating predicted failure rate of hybrid circuits per MIL-HDBK-217B and corresponding performance data for device.
Analog Devices (1pp)

13 **“AD DAC85 Reliability Predictions”**
(ADDAC85)
Presents model for calculating predicted failure rate of hybrid circuits per MIL-HDBK-217B and corresponding device data.
Analog Devices (1pp)

14 **“AD7224 Provides Programmable Voltages over Varying Ranges”**
(AD7224)
Discusses some uses of a monolithic voltage-mode CMOS D/A converter for providing programmable output voltages over varying ranges.
Analog Devices AN-E910-15-5/85 (3pp)

15 **“Am6012 12-Bit High-Speed DAC”**
(AM6012)
Describes characteristics of a 12-bit DAC and discusses various modes of operations and microprocessor interface considerations.
Advanced Micro Devices LIC-165 (12pp)

16 **“Am6012 12-Bit High-Speed DAC”**
(AM6012)
Gives applications of the AM6012 converter as a voltage-output DAC, bipolar reference, ±10V full-scale unipolar-/bipolar DACs, and successive approximation A/D converter.
Advanced Micro Devices Analog and Communications Products Data Book (13pp)

17 **“An Accurate Method for Measuring Setting Time of High Speed D/A Converters”**
(HA-4950)
Describes a reliable measurement technique, based on use of a high performance comparator.
Harris Semiconductor AN-536 (7pp)

INTERFACE

Converters (cont)

1 **"An Analysis of the Price and Performance of the AD558"**
(AD558)
Compares sample implementations of an 8-bit DAC function using discrete components versus an AD558 plus a single bypass capacitor. Advantages of the latter approach are detailed in terms of cost, speed, accuracy, reliability, power consumption, and real estate.
Analog Devices (3pp)

2 **"An Auto-Error Correction, Auto-Gain Ranging Analog Data Acquisition System"**
(ADC80)
Describes the implementation of software error correction and gain ranging techniques to improve the range and accuracy of analog data acquisition systems.
National Semiconductor AN 360 (8pp)

3 **"An Evaluation System for High-Speed A-D and D-A Converters"**
Describes a printed-circuit board for evaluating converters at the component level as well as the system level. A functional description of the components and the theory involved is included.
Motorola Semiconductor AN-848 (12pp)

4 **"An Introduction to the Sampling Theorem"**
Analyzes the sampling theorem and pitfalls encountered in its application to signal processing systems. Hardware implementation includes discussion of antialiasing filters, S/H circuits and D/A converters.
National Semiconductor AN236 (12pp)

5 **"Analog-Digital Conversion Notes"**
Covers many aspects of A/D and D/A converters including use, testing and specifying. Extensive applications information includes data systems, acquisition, distribution, communication.
Analog Devices $5.95 (254pp)

"Analog-to-Digital Conversion Techniques with the M6800 Microprocessor System"
See listing under (Microprocessor) Systems (Motorola)

6 **"Applications"**
Covers the CMOS DAC as a multiplier, attenuator, divider, calibration trimmer, low-frequency function generator, and programmable gain element. Includes applications such as programmable power supplies and digitally controlled filters.
Analog Devices CMOS DAC Application Guide, Chapter 6 (35pp)

7 **"Applications for the 9400 Voltage to Frequency/Frequency to Voltage Converter"**
(9400)
Contains 25 block diagrams of applications in which the device is used.
Teledyne Semiconductor AN-10 (8pp)

"Applications of a Monolithic Sample-and-Hold/Gated Operational Amplifier"
See (Linear) Amplifiers, Operational (Harris)

8 **"Applications of the 8700 Series A/D Converters"**
(8700)
Supplies diagrams showing interface to autoranging circuits, to gas discharge displays, and to two independent displays, operated from one A/D.
Teledyne Semiconductor AN-9 (16pp)

Converters (cont)

9 **"Applications of the AD537 IC Voltage-to-Frequency Converter"**
(AD537)
Describes device theory and operation. Presents various applications including strain-gauge input, position transducers, and a photodiode input. Block diagrams are provided.
Analog Devies (20pp)

"Applications of the MC1405/MC14435 in Digital Meters"
See listing under (Linear) Instrumentation (Motorola)

10 **"Applications of the ZN425E 8-Bit A-D/D-A Converter"**
(ZN425)
Covers converter definitions, calibration, bipolar operation. Applications: ramp generation, peak detect, channel selection, weighing system, bargraph drive, multiply/divide, and function generation.
Ferranti (31pp)

11 **"Audio Applications for the DAC-76 Companding Converter"**
(DAC-76)
Discusses the multiplying and control characteristics of the DAC-76 in audio applications. High performance digitally-controlled attenuators are featured.
Precision Monolithics AN-28 (8pp)

12 **"Autoranging Digital Multimeter Using the MC14433 CMOS A/D Converter"**
(MC14433)
Describes using the MC14433 A/D converter to build an autorange digital multimeter. The multimeter includes ac and dc voltage ranges from 200mV to 200V, ac and dc current from 2mA to 2A full scale, and resistance ranges from 2 kilohms to 2 megohms full scale.
Motorola AN-769 (5pp)

13 **"Basic Applications Circuits for CMOS DACs Operated in the Conventional Current-Steering Mode"**
Discusses current-steering mode operation, covering op amp selection, output variations, gain changes, and voltage references.
Analog Devices CMOS DAC Application Guide, Chapter 3 (6pp)

14 **"Build a Low Cost Data Acquisition System with Standard DIPs"**
(MN7130)
Shows how a complete 12-bit, 16-channel data acquisition system can be built by adding a few standard ICs to the MN7130 multiplexed sample/hold amplifier.
Micro Networks AN201 (6pp)

15 **"CA330 CMOS/SOS Flash A/D Converter Operates at Video Speed on Low Power"**
(CA330)
The CA330, a 6-bit A/D converter combining CMOS with an SOS process, brings cost, power, and real estate benefits to video speed applications. Two CA330s can be stacked to make a video-speed 7-bit converter, or three can be combined with a DAC, binary adder, control logic, and op amp to produce a very high-speed 12-bit A/D converter.
RCA ICAN-6956 (5pp)

16 **"CMOS A/D Converter Chips Easily Interface to 8080A Microprocessor Systems"**
(ADC3511, ADC3711, INS8080A)
Outlines techniques for interfacing AID converter devices to 8080A μP systems. Includes description of A/D conversion, BCD output capability, flowcharts, schematics, and block diagrams.
National CMOS Databook AN-200 (9pp)

INTERFACE

Converters (cont)

1 **"CMOS D/A Converter Circuits for Single +5V Supplies"**
(AD7528, AD7545, AD7548)
Covers the basic design techniques for using three CMOS D/A converters with a single +5V supply and methods of integrating them into microcomputers with minimal additional hardware.
Analog Devices AN-E828a-5-10/84 (4pp)

2 **"CMOS DACs in the Voltage-Switching Mode"**
(AD7500 Series)
Explains how the AD7520 and other CMOS DACs can be used in a voltage-switching mode with no offset-induced nonlinearity. System benefits include the possibility of single-supply operation (including output op amp), increased speed, and economical digital bipolar operation.
Analog Devices (2pp)

3 **"CMOS DACs in the Voltage-Switching Mode Can Work from a Single Supply, Including Output Op Amp, for Fast Response, No Offset-Induced Nonlinearity"**
(AD7520, AD7521, AD7522, AD7523, AD7524, AD7530, AD7531, AD7533)
Describes techniques for making the above CMOS D/A converters operate in the voltage-switching mode with specified linearity.
Analog Devices (2pp)

4 **"CMOS DACs: Important Considerations Above 12 Bits"**
(HS3160)
Describes the technical issues and problems involved in applying D/A converters with resolutions above 12 bits. Topics covered include temperature stability, output capacitance, settling time, digital feedthrough, output offset, reference voltage level, and finite gain effects of the output amplifier.
Hybrid Systems AB-11 (11pp)

5 **"Circuit Applications for a 12-bit ECL DAC"**
(DAC63, MC10176, MC10176, MC10136, MC10101, MCM10149)
Compares operation of T^2L and ECL D/A converters with respect to data skew, ground currents, line driving and receiving capability; includes discussions on amplitude and phase synthesis and the use of an ECL DAC in a 12-bit, 250ns A/D converter.
Burr-Brown Research AN-105 (6pp)

6 **"Companding Digital-to-Analog Converter"**
(DAC-86, DAC-87)
Discusses how a companding digital-to-analog converter (DAC) is the key component in PCM CODEC Systems.
Precision Monolithics AN-39 (13pp)

7 **"Comparison of the TML1070 with Respect to RCA CA3300"**
(TML1070)
Discusses the operating characteristics of these flash converters.
Telmos AN-1 (2pp)

8 **"Computer Programs for Computing Computational Errors, Output Ripple, and 1% Settling Time for RMS Converters"**
Gives programs for the Apple II to calculate values of DC error, ripple, and averaging error for RMS converters.
Analog Devices RMS to DC Conversion Application Guide C (2pp)

9 **"Counter Type A to D Converter"**
(HI1080)
Circuit details of an A to D converter employing a unidirectional digital counter and the HI-1080 eight-bit D to A converter to generate a ramp voltage.
Harris Semiconductor AN-512 (3pp)

Converters (cont)

10 **"Current-Steering Chip Upgrades Performance of D/A Converter"**
Explains how a monolithic array of bit switches uses current steering to improve the speed and precision of D/A converters.
Teledyne Philbrick AN-17 (6pp)

11 **"D/A Converter Differential Linearity Error-It Really Shows Up"**
Discusses differential linearity, the difference in analog output for a change between two successive digital input codes. Gives graphs of two examples with the same linearity specification.
Burr-Brown AN-58 (2pp)

12 **"D/A Converter Generates Hyperbolic Functions"**
(DAC-20)
Explains operating theory and design considerations of two IC hyperbolic function generator. Includes circuit diagrams.
Precision Monolithics AN-23 (3pp)

13 **"DAC-08 Applications Collection"**
(DAC-08)
Discusses the benefits of dual output, and high compliance. Covers use as a CRT display driver, bridge transducer control system, A/D converter, waveform generator, digital addition/subtraction with analog output, digital attenuator and microprocessor controlled A/D converter.
Precision Monolithics AN-17 (12pp)

14 **"DAC-08 Control of A 555 Timer IC"**
(DAC-08)
Describes a digitally or microprocessed controlled one-shot and an astable multivibrator using two of the low cost building blocks, the DAC-08 and the 555 timer. Digital control ranges of 255 to 1 and 510 to 1 are shown for one-shot and astable applications allowing periods of 18 μsec to 1.4 seconds and frequencies of 1 Hz to 60 kHz.
Precision Monolithics AN-36 (3pp)

"Data Acquisition Networks with NMOS and CMOS"
See listing under (Microprocessors) Applications (Motorola)

15 **"Data Acquisition and Conversion Handbook"**
Discusses data acquisition/conversion principles. With applications and glossary.
Datel-Intersil $4.95 (250pp)

16 **"Data Conversion Interfacing with the 8080 Microprocessor"**
(8080)
Discusses Analog-to-Digital Conversion (ADC) and Digital-to-Analog Conversion (DAC) and their importance in input/output (I/O) control functions when interfacing with the 8080 Microprocessor. Describes low cost and system simplicity in the versatility of a DAC as it progresses from a μP output device to an ADC input function and finally to its use in a complete Data Acquisition System.
Precision Monolithics, Inc. AN-30 (12pp)

17 **"Data Conversion with Companding DAC Devices"**
Introduces companding principles and use of companding DACs in industrial and PCM transmission systems. Provides companding DAC circuit description and discussion of how μP based data acquisition systems, motion control, audio systems, and telecommunication systems.
Advanced Micro Devices (36pp)

INTERFACE

Converters (cont)

1 **"Data Conversion with Companding DAC Devices"**
(AmDAC-08, Am6072, Am6070, Am6071)
Explains the principles of companding transfer functions and the use of companding D/A converters in A/D conversion, industrial systems, and PCM transmission systems.
Advanced Micro Devices Analog and Communications Products Data Book (35pp)

2 **"Data Converter Test Methods for Digital Audio Applications"**
(PCM50, PCM52, PCM53, PCM75)
Discusses the relative importance of operating parameters of data converters when applied to digital audio systems as opposed to traditional instrumentation applications. The primary parameters are pinpointed, with appropriate test circuits and evaluation methods given.
Burr-Brown AN-113 (6pp)

3 **"Designing High Speed Data Acquisition Systems"**
Discusses the basics of data acquisition systems; focusing on A/D converters, sample-and-hold circuits, and multiplexer modules.
Teledyne Philbrick AN-21 (12pp)

4 **"Differential and Multiplying Digital-to-Analog Converter Applications"**
(DAC-08)
Describes use in 2-quadrant, 4-quadrant, 4-quadrant and AC-coupled multiplication. Also covers differential and ratiometric conversion, a nulling bridge circuit, a power monitor, and algebraic computation circuits with analog output.
Precision Monolithics AN-19 (8pp)

5 **"Digital Voltmeters and the MM5330"**
(MM5330)
Describes basic counting techniques for building digital voltmeters and shows how the MM5330 can be used in a dual slope system.
National MOS/LSI Databook AN-155 (8pp)

6 **"Digital to Analog Converter High Speed DAC Family"**
(HI562, HI5608, HI5610)
Provides functional and operational diagrams plus descriptions of the devices.
Harris Semiconductor AN-523 (4pp)

7 **"Digital to Analog Converter Terminology"**
Explains need to D/A and terms used in specifying it.
Harris Semiconductor AN-522 (3pp)

8 **"Digital to Analog Converter: High Speed ADC Applications"**
Discusses tracking and successive-approximation a/d converter design. Presents a data acquisition system including block diagrams.
Harris Semiconductor AN-524 (3pp)

9 **"Digital-to-Analog Conversion Using the RCA CD4007A COS/MOS IC"**
(CD4007A)
Discusses resistance networks for DAC's and a voltage-follower amp for single-supply operation. Describes a 9-bit COS-MOS DAC.
RCA ICAN-6080 (6pp)

10 **"Digital-to-Analog Converter Applications"**
(HI1080, HI1085)
Operating modes and applications of HI-1080 converter, which features resistor ladder network and switching devices on same chip. Discusses cascaded D to A converter as well as up-down counter and successive approximation A to D converters.
Harris Semiconductor AN-511 (7pp)

Converters (cont)

11 **"Direct Bus Interfacing using the ZN427/ZN428"**
(ZN427, ZN428)
Describes how A/D and D/A converter chips are interfaced to most popular 8-bit microprocessors. Provides timing diagrams and electrical characteristics.
Ferranti Application Report 14 (9pp)

12 **"Do's and Don't's of Applying TML1070 Flash A/D Converter"**
(TML1070)
The TML1070 can be operated over a wide range of parameters, but certain precautions must be taken for optimum performance. This note tells how to achieve maximum signal integrity or lowest power operation.
Telmos AN-3 (2pp)

13 **"Do's and Don'ts of Applying A/D Converters"**
Examines topics concerning proper system design when using A/D converters. Subjects treated include ground loop errors, components, references, capacitive coupling, and thermal effects.
Intersil A018 (2pp)

14 **"Dynamic Resolution Switching on the 1S74 Resolver-to-Digital Converter"**
(1S74)
The 1S74 resolver-to-digital converter can be switched from 10- to 16-bit resolution by external TTL signals in some high-resolution applications. This note describes the precautions to be taken when changing gear while the converter is tracking.
Analog Devices

15 **"Exploring the AD667 12-Bit Analog Output Port"**
(AD667)
Describes a 12-bit D/A converter in which an on-board voltage reference, output amplifier, and double-buffered latch permit it to function as a self-contained analog voltage output port for a microprocessor.
Analog Devices AN-E875-15-11/84 (8pp)

16 **"Exponential Digitally Controlled Oscillator Using DAC-76"**
(DAC-76)
Depicts a 4-IC microprocessor-controlled oscillator with a 8159 to 1 frequency range covering 2.5 Hz to 20 kHz. The circuit uses an exponential current output D/A converter as a programmable current source.
Precision Monolithics AN-20 (3pp)

17 **"Extending the Capabilities of the MC10315/10317 Flash A/D Converters"**
(MC10315, MC10317)
Recent advances have provided the means to produce 7-bit flash converters in monolithic form. This note discusses some ways in which users can extend the resolution and speed of the basic devices.
Motorola Semiconductor AN-844 (6pp)

18 **"Flash Analog to Digital Converters: Optimizing Performance"**
Presents background information on analog to digital conversion, the basics of flash A/D techniques, and practical considerations for the successful implementation of a flash A/D.
Comlinear AN-103-1 (3pp)

INTERFACE

Converters (cont)

1 **"Flyback Converter"**
(LAS6320)
Covers the field of single-output and multiple-output flyback converters.
Lambda Semiconductors Applications Handbook II (16pp)

2 **"Function and Application of 3½ Digit A/D Converter Set"**
(LD110, LD111)
Describes the operation of the LD110 digital processor and the LD111 analog processor. Various DVM circuits are shown including circuits for ratio, current, ac voltage and frequency measurements. A detailed error analysis is provided.
Siliconix AN74-1 (12pp)

3 **"Function/Application of the LD120/LD121A 4¼-Digit A/D Converter Set in Measurement Systems"**
(LD120, LD121A)
The application of the LD120/1A ICs to A/D conversion systems in panel members and voltmeters is discussed. Operation of the devices is described, application circuits are considered, and a trouble-shooting chart is provided.
Siliconix AN77-1 (10pp)

4 **"Function/Application of the LD122/LD121A 4½ Digit A/D Converter Set in Measurement Systems"**
(LD122, LS121A)
Discusses differential measurement techniques, input buffer selection considerations, system layout, grounding methods and troubleshooting in thermocouple, resistance bridge and strain-gage measurement systems using an A/D converter set.
Siliconix AN80-8 (8pp)

5 **"Gain Error and Gain Temperature Coefficient of CMOS Multiplying DACs"**
(AD7542, AD7527)
Details the parameters that affect the gain of CMOS multiplying DACs, including gain temperature coefficient due to gain trim resistors R1 and R2, gain shift due to leakage from V_{DD}, and offset shift due to leakage across the switches.
Analog Devices (4pp)

7 **"Generate Non-Linear Transfer Functions with Flash A/D Converters"**
(TDC1019)
Explains how using a flash converter in nonlinear mode can solve the speed vs resolution tradeoff in applications requiring large dynamic range.
TRW LSI TP-19 (4pp)

8 **"Getting the Best Performance from Video D/A Converters"**
Offers guidance to the design engineer and printed circuit board designer on ways to obtain optimal performance from a video D/A converter.
Brooktree AN-1 (4pp)

9 **"High Speed Digital-to-Analog and Analog-to-Digital Techniques"**
Gives overview that includes voltage and current output D/A, parallel (flash), tracking, successive approximation, and parallel ripple A/Ds as well as nonsynchronous and synchronous VTF A/D. Glossary of terms.
Motorola AN-702 (14pp)

Converters (cont)

10 **"High-Performance Frequency-to-Voltage Converter Using the XR-2211"**
(XR2211)
Discuss the design of a stable, highly linear F/V converter using the XR-2211 phase locked loop.
Exar AN-23 (2pp)

11 **"How to Specify and Test Voltage-to-Frequency and Frequency-to-Voltage Converters"**
Defines device parameters, specifications, and test techniques.
Teledyne Philbrick AN-22 (4pp)

12 **"Input Buffer Amplifier Requirements"**
(AD536, 636, 637)
Explains the necessity of an input buffer amplifier for RMS converters and how to configure one.
Analog Devices RMS to DC Conversion Application Guide B (6pp)

13 **"Inside CMOS DACs"**
Details on the basic design and processes of CMOS DACs, with a guide to typical operating parameters.
Analog Devices CMOS DAC Application Guide, Chapter 2, (8pp)

14 **"Interfacing Precision Monolithics Digital-to-Analog Converters with CMOS Logic"**
(DAC-100, DAC-01)
Analyzes input circuits of these DACs and CMOS interfaces. Describes a complete 10-bit DAC and an 8-bit A/D.
Precision Monolithics AN-14 (4pp)

15 **"Interfacing the AD2036 6 Channel Digital Scanning Thermometer with the ANP-9 Thermal Printer."**
(AD2036)
Describes the use of the AD2036 digital scanning thermometer as an interface to the Gulton ANP-9 thermal head alpha-numeric printer. The system provides a low-cost means of achieving a permanent record of temperature readings.
Analog Devices

16 **"Interfacing the AD558 Dacport to Microprocessors"**
(AD558)
Examines considerations for interfacing an 8-bit DAC with the 8080A, 8085A, 8048/8758, 6800/650X and 1802 microprocessors. Example applications include ramp generation and software-controlled analog-to-digital conversion.
Analog Devices (6pp)

17 **"Introduction to CMOS DACs"**
An introduction to CMOS D/A converters based on an R-2R resistive ladder network. Covers basic concepts, multiplying properties, codes and terminology.
Analog Devices CMOS DAC Application Guide, Chapter 1 (4pp)

18 **"Introduction to Quantized Feedback"**
(LD111A, LD120, LD122, LD130, LD110, LD121A, LD114)
Describes propietary approach to A/D conversion using an analog processor and digital controller and with auto-polarity, auto-zero and ratiometric operation.
Siliconix AN81-2 (10pp)

19 **"Low Cost Four Channel DAC gives BCD or Binary Coding"**
(DAC-08, DAC-20)
Describes the construction of a four-channel digital-to-analog converter using four multiplying DACs, a precision quad op amp, a system IC voltage reference, and a DIP-packaged thin-film resistor network.
Precision Monolithics AN-26 (4pp)

INTERFACE

Converters (cont)

1 **"Low Cost, High Speed Analog-to-Digital Conversion with the DAC-08"**
(DAC-08)
Discusses the successive approximation technique to A/D and describes three designs with conversion times of 1, 2, and 4 μsec.
Precision Monolithics AN-16 (7pp)

2 **"Magnitude-Plus-Sign ADC Using a V-F Converter"**
(4701, 4703, 4705)
Explains how an absolute-value circuit and counter can transform an inexpensive V/F module into a magnitude-plus-sign A/D converter with better than 11-bit linearity.
Teledyne Philbrick AN-6 (1pp)

3 **"Methods for Generating Complex Waveforms and Vectors Using Multiplying D/A Converters"**
(AD7544)
Describes analog waveform synthesis using CMOS multiplying D/A converters, including staircase, triangle and sawtooth waveforms.
Analog Devices (6pp)

4 **"Microprocessor Interface Techniques as Applied to the Siliconix A/D Converter Family"**
(L121A, LD130)
Discusses cost and speed advantages of using A/D converters instead of a peripheral interface device for synchronous or asynchronous interface to a microprocessor.
Siliconix AN81-1 (4pp)

5 **"Microprocessor Interfacing Using the ZN427/ZN428 Data Converters"**
(ZN427, ZN428)
Demonstrates the design of an analog I/O system using A/D and D/A converters with 6800 and 8085A microprocessors. Includes circuit, timing and logic flow diagrams plus example programs.
Ferranti Application Notes 10, 11 and 12 (28pp)

6 **"Microprocessor Interfacing Using the ZN432 10-Bit ADC"**
(ZN432)
Describes a 10-bit A/D converter IC and techniques for interfacing with 8-bit microprocessors using a minimum of external discrete components and standard TTL logic elements.
Ferranti Electric AR-16 (9pp)

7 **"Modelling Analysis and Compensation of the Current Mode Converter"**
(UC1846)
Demonstrates how the performance of any current-mode converter can be improved while reducing or eliminating problems with instability subharmonic oscillation, nonideal loop response, and noise sensitivity.
Unitrode U-97 (6pp)

8 **"Modelling, Analysis and Compensation of the Current-Mode Converter"**
Explains how adding a fixed amount of slope compensation to a sensed current waveform can improve the performance of any current-mode converter.
Unitrode U-97 (6pp)

9 **"Modular DC Output Power Supply Parameter Definition and Measurement"**
Describes basic specifications, current limiting, and output protection of DC output power supplies. Also gives information on the input, output, and common mode noise of DC/DC converters.
Teledyne Philbrick AN-26 (3pp)

Converters (cont)

10 **"Modular VFs and FVs: Simple Solutions to Everyday Conversion Problems"**
Describes applications for V/F and F/V converters, with schematics and design tips.
Teledyne Philbrick AN-32 (7pp)

11 **"Need a 1 kHz Full-Scale V-F?"**
(4701, 4703, 4705, 4709)
Offers three techniques by which a V/F converter can be used to produce a full-scale frequency lower than its rated frequency.
Teledyne Philbrick AN-2 (1pp)

12 **"Operation Applications of the AD654 IC V-to-F Converter"**
(AD654)
Describes the theory of operation of the AD654, discusses general application precautions, and presents numerous application examples.
Analog Devices AN-E923-25 (28pp)

13 **"Principles and Applications of the ICL7660 CMOS Voltage Converter"**
(ICL7660)
Describes operation and application of a monolithic voltage converter that provides a complementary voltage output of − 1.5V to − 10V with a + 1.5V to + 10V input.
Intersil A051 (8pp)

14 **"Principles of Data Acquisition and Conversion"**
Discusses basic principles of analog to digital systems including sampling rate, aperture error, accuracy, resolution, throughput, and codes.
Burr-Brown AN-79 (5pp)

15 **"Quick Selection Guide for DC/DC Converter Design Equations"**
Gives information on design equations, waveforms and maximum electrical stresses for step-up, step-down, inverting step-up, and Cuk step-down/step-up converters.
Lambda Semiconductors Applications Handbook IV (10pp)

16 **"RC4151/52/53 Voltage-to-Frequency Converters"**
(RC4151, RC4152, RC4153)
Describes the principles of operation and applications involving data conversion, data transmission, motor speed controls and other uses for VFCs.
Raytheon Semiconductor AN25 (32pp)

17 **"RMS Applications Circuits"**
(AD534, 536A, 580, 741)
Discusses an RMS automatic gain control amplifier and its applications in audio processing, instrumentation, and data acquisition.
Analog Devices RMS to DC Conversion Application Guide III (12pp)

18 **"RMS to DC Conversion—Basic Design Considerations"**
(AD536A, 636, 637)
Discusses the accuracy of RMS-to-DC converters, averaging and filtering considerations, settling time, using internal buffer amplifiers, and the effects of symmetry, DC offset, and input waveform duty cycle.
Analog Devices RMS to DC Conversion Application Guide II, (16pp)

Converters (cont)

1 **"RMS-DC Conversion Theory"**
(AD536A, 636, 637)
A tutorial on basic definitions on RMS-to-DC conversion, methods of AC measurement, conversion techniques, and the operating principles of available converters.
Analog Devices RMS to DC Conversion Application Guide I (4pp)

2 **"Ready-to-Use DC/DC Converter Circuit Collection"**
(LAS6320, LAS6300, LAS1612)
A collection of circuits for designing step-up, step-down, flyback, and negative-to-positive buck-boost converters. Dual-output transformerless converters and voltage inverting DC/DC converters are also covered.
Lambda Semiconductors Applications Handbook III (14pp)

3 **"Remote Control Dual Range A/D Converter Using the 7106"**
(7106)
Discusses design of a remote-control, dual-range voltage-measuring circuit using a A/D converter-display driver chip.
Teledyne Semiconductor AN-13 (1pp)

4 **"Repetitive Mode Operation for Models 4109/4111 Integrating A/D Converters"**
(4109, 4111)
Runs through external trigger generator and sure start circuit schemes which are used when the devices must run without ceasing to convert.
Teledyne Philbrick AN-28 (2pp)

5 **"Resolver-to-Digital Conversion—A Simple and Cost-Effective Alternative to Optical Shaft Encoders"**
(1S60)
Discusses the advantages of using resolvers in the cost-effective measurement of position.
Analog Devices AN-E903-10 (4pp)

6 **"Selecting A/D Converters"**
Compares and contrasts successive approximation and integrating A/D conversion techniques with respect to speed, accuracy, and cost.
Intersil A016 (6pp)

7 **"Settling Time"**
Explains the importance of settling time and discusses ways of measuring it for high-speed 12-bit D/A converters and operational amplifiers.
Burr-Brown AN-115 (14pp)

8 **"Simple Interface between D/A Converter and Microcomputer Leads to Programmable Sine-Wave Oscillator"**
(AD7542)
Outlines a simple interface between a 12-bit CMOS D/A converter and an 8-bit MCS-48 microcomputer as part of a circuit that generates programmable low-distortion sine waves.
Analog Devices AN-E889-15-2/85 (6pp)

9 **"Simplify A/D Converter Interface with Software"**
(TSC7135)
Discusses use of the strobe output of the TSC7135 4-1/2-digit A/D converter in simplifying interfacing to displays.
Teledyne Semiconductor AN-17 (4pp)

10 **"Single-Supply Operation for CMOS DACs Using the Voltage-Switching Mode"**
Explains the differences between current and voltage switching modes of operation, offering guidelines and tips on the implementation of the letter.
Analog Devices CMOS DAC Application Guide, Chapter 4 (4pp)

Converters (cont)

11 **"Software Combines with CMOS LSI to Form 3-3/4-digit DVM"**
(SY6522, TS7109, TS7211A)
Describes the capabilities of 3-3/4-digit DVM using a display driver, A/D converter, and interface adapter.
Teledyne Semiconductor AN-22 (4pp)

12 **"Software Combines with CMOS LSI to Form 3¾-Digit DVM"**
(TSC7211A, TSC7109)
Explains how a CMOS A/D converter and display driver can be programmed to expand a DVM's display capabilities from 3½ to 3¾ digits and its resolution from a typical 1,999 to 4,095 counts.
Teledyne Semiconductor AN-22 (4pp)

13 **"Software Controlled A/D Conversion Using DAC-08 and the 8080A Microprocessor"**
(DAC-08)
Describes software controlled, 8-bit A/D conversion using the DAC-08 and the 8080A. Subjects include I/O interface considerations, I/O control using memory mapping, and a successive approximation A/D conversion algorithm.
Precision Monolithics AN-22 (4pp)

14 **"Solve Sensor Offset Problems with the TSC7106"**
(TSC7106)
Shows how an A/D converter can solve problems caused by nonideal sensors by providing input offset and reference voltages.
Teledyne Semiconductor APB-7 (1pp)

15 **"Solve Your Measurement Problems"**
Discusses V/F and F/V converters and their use in data acquisition problems.
Teledyne Philbrick AN-20 (6pp)

16 **"Specifying and Testing Analog-to-Digital Converters"**
Defines the basic parameters, specifications, and test methods.
Teledyne Philbrick AN-24 (7pp)

17 **"Specifying and Testing Digital-to-Analog Converters"**
Defines basic parameters, specifications and test methods.
Teledyne Philbrick AN-25 (7pp)

18 **"Squeeze High Performance Out of Low-Cost Hybrid Data Converters"**
Lists ways in which converter performance can be improved by the addition of a few external components.
Burr-Brown AN-86 (4pp)

19 **"Static and Dynamic Testing of Digital-to-Analog Converters"**
Describes test procedures and equipment for measuring offset, full-scale, gain and linearity errors in DACs. Test equipment discussed ranges from DVMs to automatic testers.
Burr-Brown AN-99 (6pp)

20 **"Step-Down Converter"**
(LAS6300)
Comprehensive text on designing with step-down converters.
Lambda Semiconductors Applications Handbook I (30pp)

21 **"Strobing the DAC-08 Under Logic Control"**
(DAC-08)
Gives connections for strobing the output of this DAC.
Precision Monolithics AB-1 (1pp)

INTERFACE

Converters (cont)

1 **"Synchro and Resolver Conversion"**
Discusses synchros and resolvers, their relationship to other angular transducers, synchro/resolver to digital conversion, digital to synchro/resolver conversion, and potential applications.
Analog Devices (191pp)

2 **"TSC7109 Records Remote Data Automatically"**
(TSC7109)
Details a low-cost, low-power, flexible data logging system composed of an A/D converter, 2 Kbyte static RAM, and a few gates and counters.
Teledyne Semiconductor AN-24 (2pp)

3 **"TSC7135 to 6502/6522 Microprocessor Measurement System"**
(TSC7135)
Describes use of the TSC7135 A/D converter in an interrupt driven measurement system that requires only one 6522 I/O port.
Teledyne Semiconductor AN16

4 **"TSC7660 Powers RS-232 Data Loop"**
(TSC7660)
Explains how a low-cost circuit using a DC/DC converter and optoisolator converts TTL signals to RS-232 levels without the added expense of a negative power supply.
Teledyne Semiconductor APB-8 (1pp)

5 **"Testing the Critical Parameters of RMS Converters"**
Covers the two basic parameters of RMS converters that require different testing procedures than precision rectifier circuits.
Analog Devices RMS to DC Conversion Application Guide A (6pp)

6 **"The AD7574 Analog to Microprocessor Interface"**
(AD7574)
A guide to microprocessor interfacing for the AD7574 8-bit A/D converter.
Analog Devices (5pp)

7 **"The AD7574 Analog to Microprocessor Interface"**
(AD7574)
Describes the AD7574 in its three main microprocessor interface modes with reference to external clock source, input range switching and input multiplexing applications.
Analog Devices E694-10 (5pp)

8 **"The ICL7104—A Binary Output A/D Converter for Microprocessors"**
(ICL7104, ICL8052, ICL8068)
Describes the operation of the ICL7104, and either the ICL8052 or ICL8068, as a dual-slope integrating converter.
Intersil A030 (14pp)

9 **"The Integrating A/D Converter"**
Discusses the dual slope technique with considerable attention to error analysis.
Intersil A017 (4pp)

10 **"The Logic Interface"**
(AD7524, AD7528, AD7533, AD7545)
A practical guide to CMOS-to-TTL level shifting in CMOS DACs.
Analog Devices CMOS DAC Application Guide, Chapter 5 (4pp)

Converters (cont)

11 **"The Multiplying DAC Application Guide"**
(AD7520, AD7521, AD7522, AS7523, AD7524, AD7525, AD7530, AD7531, AD7533, AD7541)
Discusses applications which take advantage of the MDAC's ability to accept AC or DC references, which can be of either polarity. Applications include digitally-controlled gain and attenuation circuits.
Analog Devices (40pp)

12 **"The OP-17, OP-16, OP-15 as Output Amplifiers for High Speed D/A Converters"**
(DAC-08, DAC-20, DAC-76, OP-15, OP-16, OP-17)
Illustrates design of high speed, voltage output D/A converters using these devices. Circuit diagrams for high speed, low drift, and low power applications are provided.
Precision Monolithics AN-24 (3pp)

13 **"The TDC1048: A New Low-Power 8-Bit A/D Converter"**
(TDC1048)
Gives design features, process features, and performance characteristics of an 8-bit flash A/D converter.
TRW LSI TP-32 (3pp)

14 **"Three-Phase Sine-Wave Generation Using the AD7226 Quad DAC"**
(AD7226)
Describes a quad 8-bit CMOS D/A converter and its use for generating three-phase sine waves for driving small three-phase motors.
Analog Devices AN-E924-15-7/85 (3pp)

15 **"Tips for Using Single-Chip 3½ Digit A/D Converters"**
(ICL7106, ICL7116, ICL7107, ICL7117, ICL7126)
Provides answers to commonly asked questions regarding A/D converter application in display systems. Includes troubleshooting guide, normal waveforms and equations for component values.
Intersil A052 (8pp)

16 **"Understanding Flash A/D Converters Technology"**
Gives in-depth explanations of the specified parameters of flash A/D converters.
TRW LSI TP-30 (12pp)

17 **"Understanding LOGDACS"**
(AD7100 Series)
Basic information on a series of CMOS multiplying D/A converters characterized by an exponential D/A transfer function.
Analog Devices (4pp)

18 **"Understanding LOGDACs"**
(AD7100 Series)
Outlines the theory of LOGDACs (multiplying DACs characterized by an exponential digital-to-analog transfer function), and describes basic circuit configurations.
Analog Devices E797-10 (4pp)

19 **"Understanding the Auto-Zero and Common-Mode Performance of the ICL7106/7107/7109 Family"**
(ICL7106, ICL7107, ICL7109)
Shows how to avoid application problems with differential-input A/D converters having differential reference and separate analog and digital ground references.
Intersil Application Bulletin A032 (8pp)

20 **"Using the 4130 ADC Series, 4855 Sample-Hold, and 4550 Multiplexer in High Speed Data Acquisition Systems"**
(4130, 4855, 4550)
Analyzes several types of data acquisition systems built from an A/D converter, S/H amplifier, and buffered multiplexer.

INTERFACE

Converters (cont)

1 **"Using the ECL HDG-Series in a TTL World"**
(HDG)
A discussion of the benefits of ECL over TTL and an ECL D/A converter's application in TTL systems.
Analog Devices (2pp)

2 **"Using the ECL HGD-Series in a TTL World"**
(HDG Series)
Describes techniques for using the HDG series digital-to-analog converters with TTL interfacing.
Analog Devices E756-10 (2pp)

3 **"Using the TDC1018 and TDC1034 in a TTL Environment"**
(TDC1018, TDC1034)
Although designed for operation in systems employing ECL logic, the TDC1018 and TDC1034 D/A converters can be used in TTL environments, as this note illustrates.
TRW LSI TP-33 (3pp)

4 **"VF's as Long-Term Integrators"**
(4701, 4703, 4705)
Explains the benefits of using a V/F converter as a long-term integrator instead of analog approaches.
Teledyne Philbrick AN-9 (2pp)

5 **"VFC32 Operation at 500 kHz"**
(VFC32)
Explains the operation of the VFC32 voltage-to-frequency converter at 500 kHz. Four interface circuit configurations are given.
Burr-Brown AN-109 (2pp)

6 **"VFs, FVs, and Audio Tape Recorders"**
(4701, 4702)
Discusses the use of V/F and F/V converters as a link between a tape recorder and X-Y plotter.
Teledyne Philbrick AN-11 (3pp)

7 **"What Designers Should Know About Data-Converter Drift"**
Examines components of drift as they apply to A/D and D/A converters. Includes discussion of the effect of reference drift and computation of worst case error.
Burr-Brown AN-89 (4pp)

8 **"Why the Velocity Output on the 1S74 and 1S64 Series Converters is Continuous and Step Free Down to Zero Speed"**
(1S64, 1S74)
Explains why the 1S64/1S74 series of devices, although, in effect A/D converters, have a velocity output that is not quantized.
Analog Devices AN-E893-15 (1p)

9 **"Two-Digit Serial Input LED Display Driver using TSC9404"**
(TSC9404)
A serial to 16-biy parallel converter minimizes the number of I/O lines required for a microprocessor to display data on 7-segment LEDs. Note gives operating and programming details.
Teledyne Semiconductor AN-20 (2pp)

Data Acquisition Systems

10 **"A Data Acquisition and Conversion System with less than ± LSB Offset Error"**
(HI-5900, HI-5901, HI-5712)
Describes a system incorporating automatic digital correction of offset error.
Harris Semiconductor AN-530 (2pp)

11 **"Design Considerations for a Data Acquisition System (DAS)"**
Provides a collection of guidelines for the design of a data acquisition system. Includes signal conditioning, transducers, single-ended vs. differential signal paths, low level signals, filters, programmable gain amplifiers, sampling rate, and computer interfacing.
Harris Semiconductor AN-535 (7pp)

Data Transmission

12 **"2661 Operating Mode Switching Procedures"**
(2661)
Covers methods for switching the 2661 Enhanced Programmable Communications Interface from echoplex or remote loop-back mode to normal operation and vice versa.
Signetics AN-402 (1pp)

13 **"A 20-Mbaud Full Duplex Fiber Optic Data Link Using Fiber Optic Active Components"**
(SN74LS40B, MF0D4-02F, MC1733, MC75107)
Describes the design, construction, testing and performance of a TTL-compatible, optical data link. Includes schematic, parts list and printed circuit artwork.
Motorola AN-794 (28pp)

"A COS/MOS PCM Telemetry and Remote Data Acquisition Design"
See listing under (Digital) CMOS (RCA)

"A Typical Data-Gathering and Processing System Using CD4000A-Series COS/MOS Parts"
See listing under (Digital) CMOS (RCA)

14 **"An Introduction to the Video Interface System (VIS) Devices - CDP1869 and CDP1870"**
(CDP1869, CDP1870, CDP18S020)
Describes circuit and software for mating a video-interface chip set to the CDP18S020 evaluation kit for assessing chip-set capability in the video portion of a CRT terminal.
RCA ICAN-6953 (11pp)

15 **"Applying the HI5900 Analog Data Acquisition Signal Processor"**
(HI5900)
Discusses uses and interfaces for a fully integrated hybrid analog "front-end" for a data acquisition system.
Harris Semiconductor AN-527 (4pp)

16 **"Asynchronous Receiver/Transmitter"**
(TR1602, TR1865)
General description of asynchronous transmission and operation of TR1602, which is capable of full or half duplex operation. Describes application in distributed computer networks.
Western Digital Application Report 1 (12pp)

INTERFACE

Data Transmission (cont)

1 **"Binary Synchronous Communications"**
(2661, 2653)
Covers procedures and hardware for implementing character-oriented and bit-oriented protocols in a data communications network.
Signetics TB-4001 (3pp)

2 **"Building a Complete FSK Modem Using XR-2211 and XR-2206"**
(XR2206, XR2211)
Describes the construction of a modem system using frequency shift keying for serial data transmission.
Exar AN-20 (4pp)

3 **"Bussing with MECL 10,000 Integrated Circuits"**
(MC10111, MC10123)
Describes use of MECL 10,000 circuits in high speed data transmission systems with emphasis on transmission line construction and termination.
Motorola AN-726 (6pp)

4 **"Convolution: Digital Signal Processing"**
Discusses the Impulse function and its effect on linear systems in terms of the fundamental convolution theorem. Analytical and illustrative examples.
National Semiconductor AN237 (8pp)

5 **"Data Bus and Differential Line Drivers and Receivers"**
(DS7820, DS7830, DS7831, DS7832, DS7833, DS7834, DS7835, DS7836, DS7837, DS7838, DS7839, DS8820, DS8830, DS8831, DS8832, DS8833, DS8834, DS8835, DS8836, DS8837, DS8838, DS8839, DS1488, DS1489)
Includes schematics and describes the operation of these line drivers, receivers and transceivers.
National AN-83 (12pp)

6 **"Data Comm Async and Sync Transmission"**
(2661, 2652, 2681)
Reviews fundamental considerations and describes controller chips for implementing synchronous and asynchronous data transmission.
Signetics TB-4004 (3pp)

7 **"Data Comm Error Control"**
(2652, 2653, 2661)
Describes chip set for implementing error control at system protocol levels in data communication systems.
Signetics TB-4003 (3pp)

8 **"Data Comm Protocols"**
(2652, 2653, 2661)
Discusses procedures, conventions and hardware governing data transfer between data-processing machines.
Signetics TB-4000 (2pp)

9 **"Device Operation and System Implementation of the Asynchronous Communications Interface Adapter"**
(MC6850)
Provides information on ACIA transmitter and receiver operation, initialization, status register bits, use in a microcomputer based communications system, software requirements, and transmission subroutines.
Motorola AN-754 (11pp)

10 **"Digital Data Comm Message Protocol"**
(2652, 2661, 2653)
Covers operating modes, format, control set, error detection and recovery, and implementation of message protocols.
Signetics TB-4005 (3pp)

Data Transmission (cont)

11 **"Eight Channel Codec Demonstrator"**
Explains how a codec demonstrator system is used to provide a working digital transmission system incorporating eight analog input channels digitally interfacing to eight output channels.
Precision Monolithics AN-37 (8pp)

12 **"FOT/FOR110 Link Length Calculations"**
(FOT110, FOR110)
Transmitter output power, receiver sensitivity, and optical fiber characteristics are all taken into account in determining the maximum length achievable in a fiber optic link. Four sample calculations are given.
Burr Brown AN-111 (4pp)

13 **"Fiber Optic Transmitter Accepts Most Analog Signals"**
(3714T)
Describes the capabilities of the 3714T fiber optic transmitter and its applications in the transmission of low-level analog signals in hostile environments. Various implementations for different system requirements are discussed.
Burr-Brown AN-110 (7pp)

14 **"Four-Channel Shared Codec"**
(DAC-86, DAC-87)
Describes a four-channel CODEC assembled from LSI components as a cost-effective digital transmission system requiring a relatively small number of devices. The system makes use of a single COMDAC® companded DAC-86 or DAC-87 digital-to-analog converter for both encoding and decoding.
Precision Monolithics AN-38 (6pp)

15 **"Generate 4-Channels of Analog Output Using AD 7542 12-Bit D/A Converters and Control the Lot with Only Two Wires"**
(AD7542)
Shows how a Universal Asynchronous Receiver Transmitter can be configured to drive four AD 7542 12-bit D/A converters.
Analog Devices AN-E909-15

16 **"High Speed Digital Communications"**
(HD245, HD246, HD545, HD546)
Describes the use of the HD-245 family in a current mode digital communication system (up to 2 Mbs over 1,000-ft-long line.)
Harris Semiconductor AN-205 (4pp)

17 **"Integrated Circuits for Digital Data Transmission"**
(DS7820, DS7830, DS8820, DS8830)
Describes the operation and use of the DS7830 line driver and DS7830 line receiver for transmission systems using twisted-pair lines. Includes a mathematical design analysis of this line receiver.
National Special Functions Databook AN-22 (16pp)

18 **"LSI Modem Integration: The Communication Link for the 1980s"**
(MC6860, MC14412, AMD7910, TMS99532, CH1810, CH1812)
Gives a historical perspective on the role of modems in data communications equipment and explains modem functions.
Cermetek (17pp)

19 **"Low Speed Modem Fundamentals"**
(MC6860)
Describes interface circuitry and performance of the MC6860 low speed modem. Evaluation of the system performance in the presence of Gaussian noise is given, as well as a brief description of data couplers.
Motorola AN-731 (15pp)

INTERFACE

Data Transmission (cont)

1 **"Low Speed Modem System Design Using the MC6860"**
(MC6860)
Describes the MC6860 modem. Provides filter design tables and equations to develop a complete 100 series compatible system.
Motorola AN-747 (13pp)

2 **"Manchester II Transfers Data with Integrity, Speed"**
(HD6409)
Discusses Manchester serial data transmission theory, offers comparisons between industry standard codes, and describes operation of the HD6409.
Harris Semiconductor AR-14

3 **"Mixed Data Link Extends Length, Reduces Cost"**
(3712R, 3713T)
Describes how to use a fiber-optic transmitter and receiver to form a fiber-optic data link for extending link length or reducing link cost. Provides a performance chart for comparing various cable types.
Burr-Brown AN-97 (4pp)

4 **"Monolithic Bipolar Circuits for Video Speed Data Conversion"**
(TDC1007J, TDC1016J)
Describes the "flash" A/D converter, TDC1007J, and the TDC1016J, D/A converter. Also included are appoaches for extending the performance of the TDC1007J.
TRW/LSI A-5

5 **"PABX Circuit Line Using the AMS2002"**
(AMS2002)
Outlines a typical PABX line circuit design using the AMS2002 subscriber line interface circuit. Focuses on performance parameters that are influenced by the choice of external components.
Aptek Microsystems (3pp)

6 **"Receiver/Transmitter Noise Immunity"**
(HD245, HD246, HD545, HD546)
Discusses HD-245 transmitter/receiver system noise: External magnetic and capacitive effects, crosstalk, and ground line noise. Includes a comparison with voltage mode and differential voltage switching type systems.
Harris Semiconductor AN-207 (4pp)

7 **"Revised Data Interface Standards"**
(MC1489, MC1488, MC3487, MC3488, MC3486, AM26LS31, AM26LS32, SN75172, SN75174, SN75173, SN75175)
Provides a brief overview and comparison of the RS232-C, RS422, RS423, RS449, and RS485 communication interface standards.
Motorola AN781A (96pp)

8 **"Stable FSK Modems Featuring the XR-2207, XR-2206, and XR-2211"**
(XR2206, XR2207, XR2211)
Describes designing a modulator-demodulator for use in frequency-shift keying. Circuit designs and the adjustment procedure for frequency tuning is included.
Exar AN-01 (5pp)

9 **"Successive Approximation Register Design for Multi-Channel Codec's"**
Explains a low cost, high speed Successive Approximation Register (SAR) design for use with 24-channel or 32-channel encoders.
Precision Monolithics AN-31 (4pp)

Data Transmission (cont)

10 **"Synchronous Data Link Control (SDLC)"**
(2652)
Reviews protocols used in data communications networks; discusses message format, error detection and the operation of a controller chip.
Signetics TB-4002 (4pp)

11 **"The HD-6402 CMOS UART"**
(HD6402)
Discusses the power consumption, data format, control, and microprocessor interface for a universal asynchronous receiver-transmitter.
Harris TB-41 (5pp)

12 **"Transmission Line Characteristics"**
(DM7400, DS7820, DS7830, DS75452, DS8820, DS8830)
Describes the characteristics of digital signals in transmission lines and the characteristics of the line that affect transmission quality. Also compares the performance of unbalanced and balanced circuits in digital systems.
National Interface Databook AN-108 (6pp)

13 **"Transmission Line Drivers and Receivers for RS-422 and RS-423"**
(9636A, 9637A, 9638)
Reviews requirements of EIA standards RS-422 and RS-423 for interfacing data terminals and data-communications equipment with transmission live drivers and receivers. Describes theory and application of Schottky driver and receiver circuits. Circuit diagrams, performance curves and tables, and system design assistance are provided.
Fairchild Application Note 354 (16pp)

14 **"Transmission and Multiplexing of Analog or Digital Signals Utilizing the CD4016A Quad Bilateral Switch"**
(CD4016A)
Describes features and operation of this switch. Discusses applications, including switching, gating digital or analog signals, multiplexing and demultiplexing, D/A conversion, sample and hold, and squelch-control.
RCA ICAN-6601 (12pp)

15 **"Tri-State FSK Modem Design Using XR2206/XR2211"**
(XR2206, XR2211)
Design of FSK modems with carrier detection and control capability are discussed.
Exar AN-05 (6pp)

16 **"Understanding the FOT110 Fiber Optic Transmitter"**
(FOT110)
Reviews the operating parameters and features of the FOT110 fiber optic transmitter. Outlines the differences of the KG and KG-IR versions in output wavelength, power, and speed. Fiber selection and connector maintenance are also covered.
Burr-Brown AN-108 (4pp)

17 **"Use of the AM26LS29, 30, 31, and 32 Quad Driver/Receiver Family in EIA RS-422 and 423 Applications"**
(AM26LS29, AM26LS30, AM26LS31, AM26LS32)
Reviews use of the devices in implementing RS-422 and 423 with emphasis given to the EIA RS-422 balanced interface.
Advanced Micro Devices (12pp)

18 **"Using the 2653 Polynomial Generator and Checker"**
(2653)
Describes techniques and hardware for monitoring parallel data transfer between a CPU or memory and a serial receiver/transmitter or other bus oriented device.
Signetics AN-400 (16pp)

INTERFACE

Data Transmission (cont)

1 **"Using the 2670/71/72/73 CRT Terminal Chip Set"**
(2670/71/72/73)
Reviews major elements of a CRT terminal and covers the application of a display character and graphics generator, a programmable keyboard and communication controller, a programmable video timing controller and a video and attributes controller.
Signetics AN-401 (16pp)

Drivers

2 **"7106/7107 Digital Meter Applications"**
(7106, 7107)
Presents diagrams, circuit board design, test information and sources of supply for building LED or LCD digital meters around display driver ICs.
Teledyne Semiconductor AN-11 (6pp)

3 **"A Dot Matrix Controller System Design Using the 10938/10939 Display Drivers and R6500/1EB Microcomputer"**
(10938, 10939, R6500/1)
Explains how the 10938/9 dot matrix display controller chip set can be used to drive a 40-character, 5x7 dot matrix vacuum fluorescent display. Operation of the general-purpose MOS/LSI controller chip set is explained, a demonstration system is described, and several methods are given for software control of display drivers and output.
Rockwell No. 2163 (4pp)

4 **"A Monolithic IC Series for Gas Discharge Display Interface"**
(UDN-7180, UDN-7183A, UDN-7184A, UDN-7186A)
Describes a series of high-voltage drivers that provide an inexpensive, easy-to-use interface for gas discharge displays.
Sprague Electric Data Book WR-503 (6pp)

5 **"A New Driver Circuit for Displays"**
(U1096B)
Explains how the U1096B universal integrated driver component can be used to control high-resolution LED displays.
AEG-Telefunken SI 5.81 (9pp)

6 **"A New IC Optimizes High-Speed Power MOSFET Drive for Switching Power Supplies"**
(UC1706)
Explains the dynamics of high-speed power MOFSET switching as an aid in defining optimum gate drive signals for specific applications.
Unitrode U-98 (12pp)

7 **"A Novel Process for VF Display Drivers"**
Discusses the appropriateness of VF displays for automotive applications, and the mechanisms of high-voltage VF display drivers
National Semiconductor AN-378 (6pp)

8 **"A Single IC Digital Thermocouple Thermometer Using the 7106"**
(7106)
Describes design and application details of a thermometer circuit built around a display driver and for use with type J and K thermocouples.
Teledyne Semiconductor AN-12 (2pp)

9 **"AC Plasma Display"**
(SN75500A, SN75501A)
Describes the construction and operating characteristics of ac plasma displays. Explains drive requirements and how they are met by the SN75500A and SN75501A.
Texas Instruments SCA-204 (17pp)

Drivers (cont)

10 **"An IC Driver for a PM Bifilar Stepping Motor"**
(UCN-4202A)
Describes a custom circuit and its application in a stepping motor interface.
Sprague TP80-4 (2pp)

11 **"Applications of the MOC3031 and MOC3041 Zero-Crossing Triac Drivers"**
(MOC3031, MOC3041)
Describes the MOC3031 and MOC3041 optically isolated triac drivers and their application in high-wattage incandescent lamps, matrix switching, power relays, ac motors, and a microprocessor interface.
Motorola AN916 (7pp)

12 **"BCD Analog-to-Digital Converter Interface to Dot Matrix LEDs"**
(TSC14433)
Describes a TSC14433 ADC interface to 4x7 dot matrix LEDs. Within each dot matrix LED digit is an integrated circuit display latch, decoder and driver. The numeric display font matches the style used in alpha character displays so that instrument panels can be designed without resorting to mixed readout styles.
Teledyne Semiconductor AN-19 (2pp)

13 **"Basics of EL Panel Drive Techniques"**
(HV04, HV03, HV05, HV06)
Describes the application of a family of high-voltage display drivers to a 512x256-pixel electroluminescent display.
Supertex Inc. AN-5 (4pp)

14 **"BiMOS II High-Speed Interface ICs for Peripheral and Power Driver Applications"**
(UDN-5800, UDN-5810, UDN-5820)
A second generation of chips combining CMOS logic and bipolar power brings new functions and higher switching speeds at reduced cost. Describes drivers for displays, motors, printers, relays and solenoids.
Sprague Electric WR-203 (12pp)

15 **"CMOS Line Drivers"**
States reasons for using CMOS line drivers.
National AN-158 (4pp)

16 **"Design Background"**
(PBL 3717)
Explains the advantages and disadvantages of different schemes for driving a four-phase unipolar permanent magnet stepping motor.
RIFA I-01 (7pp)

17 **"Designing an LCD Dot Matrix Display Interface"**
(MM58201)
Explains the drive requirements of a liquid crystal display and the use of a CMOS LCD driver capable of handling up to 192 segments. Initialization, graph, text, and scroll programs are given.
National Semiconductor AN-350 (19pp)

18 **"Driving 7-Segment Gas Discharge Display Tubes with National Semiconductor Circuits"**
(DS8880, DS8884A, DS8885, DS8887, DS8889, DS8980, DS8981)
Explains each of the device's characteristics and operation. Application circuit diagrams also supplied.
National Interface Databook AN-84 (4pp)

INTERFACE

Drivers (cont)

1 **"Driving 7-Segment LED Displays with National Semiconductor Circuits"**
(DM5446A, DM5447A, DM5448A, DM7446A, DM7447A, DS75491, DS75492, DS7856, DS7858, DS8856, DS8857, DS8858, DS8861, DS8863, DS8864, DS8865, DS8866)
Discusses configurations and construction of 7-segment LEDs and drive modes. Describes BCD to 7-segment decoder drivers, BCD to 7-segment LED drivers, MOS to LED segment drivers, four and five segment drivers, as well as digit drivers. Describes calculator and digital clock applications.
National AN-99 (12pp)

2 **"Driving Burroughs' Bar Graph Display"**
Shows the use of comparators and flip-flops to drive these displays.
National DB-4 (2pp)

3 **"Driving Vacuum Fluorescent Displays"**
(UCN4810A, TL4810A, SN75512A, SN75513A, SN75501C)
The basic operating principles of vacuum fluorescent displays are discussed. Details various drive schemes for different display formats.
Texas Instruments SCA-208 (16pp)

4 **"Driving Vacuum Fluorescent Displays"**
(UCN4810, TL4810A, SN75512A, SN75513A, SN75501C)
Describes principles of vacuum fluorescent displays including construction and performance trade-offs; also discusses interface driver/circuit requirements and features.
Texas Instruments SCA-208 (16pp)

5 **"Expanding the Frontiers of IC Interface for Electronic Displays"**
Presents interface IC basics concerning incandescent, gas discharge, LED, plasma, fluorescent, and hot wire displays.
Sprague Electric AN29304.9 (10pp)

6 **"Hermetic BiMOS ICs"**
(UCS-4401H, UCS-4801H, UCS-4807H, UCS-4808H, UCS-4810H, UCS-4815H, UCS-4820H)
Presents simplified applications of BiMOS power drivers in interfacing with printers, displays, and motors.
Sprague WR-198 (6pp)

7 **"High-Voltage Interface Power Drivers"**
(UDN-6116A-1 to 7186A, UHP-500, UHP-533, UCN-5823, UCN-5910A, ULN-7001, ULN-7074B)
Discusses the advantages of using high supply voltages and describes a range of bipolar, DMOS, and BiMOS III driver ICs for display and printer applications.
Sprague Electric Company WR-207 (12pp)

8 **"Integrated Circuits for Current Sourcing Applications"**
(UDN-2850A, UDN-2580A, UDN-2980A, UDN6100A)
The use of source drivers can eliminate noise and transient problems by separating the logic and power returns. This note describes a number of applications of source drivers for controlling printers, relays, and displays.
Sprague Electric Data Book WR-503 (10pp)

9 **"Interface Considerations for Numeric Display Systems"**
(MC14511, MC14543)
Gives basic information on LDC, LED, gas discharge, fluorescent and incandescent displays. Discusses interfacing 7 segment displays to logic with emphasis on multiplexed systems.
Motorola AN-741 (25pp)

Drivers (cont)

10 **"Interface ICs for Motor Drive Applications"**
(UCN-4202A, UDN-2949Z, ULN-3701Z, ULN-2800A, UDN-2980A, UDN-2580A, UDN-2845B, UDN-2846B)
Presents simplified applications for monolithic bipolar ICs in driving stepper motors, ac and dc motors, and brushless dc motors.
Sprague WR-185 (7pp)

11 **"Line Driver and Receiver Considerations"**
(MC1488, MC1489, MC3486, MC3487, MC3488, MC10194, MC75107, MC75110)
Discusses line driver and receiver related topics including system description, definition of terms, important parameter measurements and application example.
Motorola AN-708A (18pp)

12 **"Line Drivers and Receivers: SN55107 Series"**
(SN55107)
Gives technical details on the SN55107 Series of line drivers and receivers. Emphasizes system considerations, including different cabling types and transmission configurations.
Texas Instruments CA-130 (33pp)

13 **"MOS Clock Drivers"**
(MH0007, MH0009, MH0012, MH0013)
Lists the characteristics of various MOS clock drivers and how they differ in their input stages.
National Special Functions Databook MB-9 (2pp)

14 **"New Power-Interface ICs"**
(UDN-2585A, UDN-2595A, UDN-6514A, UDN-2541B)
Provides overview of new monolithic bifilar ICs for high-current or high-voltage, medium-power switching applications.
Sprague TP83-10 (8pp)

15 **"PIC900 H-Bridge Motor and Solenoid Driver"**
(PIC900)
Gives the characteristics and applications of a hybrid motor driver comprised of four Darlington transistors and two base-emitter pull-up resistors.
Unitrode U-92 (10pp)

"PIN Diode Drivers"
See listing under (Interface) Switches. (National)

16 **"Power Integrated Circuits for Motor-Drive Applications"**
(UDN-2953, UDN2953, UDN-2878W, UDN-2879W, UDN-2965W, UDN-2993B, UCN-5800A, UCN-5801A, UCN-5813B, UCN-5814B, ULN-2074B, UDN-2941B, UDN-2952B, UDN-2952W, UDN-2935Z, UDN-2950Z, UDN-2933B, UDN-2934B)
Describes a broad range of power ICs usable in motor-drive applications, including unipolar and bipolar drives, full- and half-bridge drivers and Darlington switches.
Sprague Electric WR-202 (16pp)

17 **"Reliability of Series ULN-2000A and ULN-2800A High-Current Darlington Drivers"**
(ULN-2000A, ULN-2800A)
Explains the qualification tests, accelerated tests, and burn-in used to measure the reliability of ICs, with emphasis on this series of high-current Darlington drivers. Supplies information for calculating failure rate at normal junction operating temperatures.
Sprague EB-29304.6 (4pp)

18 **"Reliability of UDN-6100A High-Voltage Display Drivers"**
(UDN-6100A)
Summarizes the accelerated life tests performed on the UDN-6100A series of high-voltage display drivers, and provides information required for calculating failure rate at any junction operating temperature.
Sprague EB-29313.2 (4pp)

INTERFACE

Drivers (cont)

1 **"Self-Scanned Cascade Readout of the LS7060 and LS7061"**
(LS7060, LS7061)
Describes two 32-bit binary counter-latch-output driers and their use in system-oriented pulse counting applications.
LSI Computer Systems (3pp)

2 **"Series ULN-2000A Darlington Transistor Arrays"**
(ULN-2000A, ULN-2800A)
Describes several applications of these high-voltages, high-current Darlington transistor arrays for driving resistive, inductive or tungsten filament loads up to 125 watts.
Sprague Electric Data Book WR-503 (7pp)

3 **"Series ULN-2000A Darlington Transistor Arrays-Description and Application"**
(ULN-2001A, ULN-2002A, ULN-2003A, ULN-2004A)
Describes circuit capabilities and its use as an interface.
Sprague AN29304.9 (7pp)

4 **"Simple Voltmeter Monitors TTL Supplies"**
(LM3914)
Explains how to use a bar/dot display driver chip, a few resistors and some LEDs to make a simple expanded-scale voltmeter that runs on 5V and provides TTL undervoltage and overvoltage warning signals.
National Semiconductor Linear Brief 48 (2pp)

5 **"Solving the Stepper Motor Interface Problem"**
(SI7250)
Discusses the application of the SI7250 H-Bridge predriver and controller and MOSPOWER devices to efficient interfacing of a TTL-level output from a microcontroller to a stepper motor.
Siliconix AN82-1 (4pp)

6 **"TSC700A Drives LED Display for TSC14433 ADC"**
(TSC14433, TSC700A)
Provides details on a digital measurement system using a 3-1/2 digit analog to digital converter and a high-segment-current driver. The 0.05% resolution system requires only a 5-volt supply with a TSC7660 dc to dc converter generating the A/D converter's negative 5-volt supply.
Teledyne Semiconductor AN-21

7 **"TSC7211AM/TSC7212AM Display Driver Interface"**
(TSC7211AM, TSC7212AM)
Covers the interface between 4-digit CMOS drivers for LED and LCD displays and a Z-80, 6502, or 8080 microprocessor.
Teledyne Semiconductor AN-18 (4pp)

8 **"The MM58348/342/341/248/242/241 Directly Drive Vacuum Fluorescent Displays"**
(MM58348, MM58342, MM58341, MM58248, MM58242, MM58241)
Demonstrates several ways in which a series of display drivers can be configured to drive and control a wide range of VF displays.
National Semiconductor AN-371 (12pp)

9 **"Trends in IC Interface for Electronic Displays"**
(UDN-2980, UDN-6116A, UDN-2580A, ULN-2804A, UCN-4810A, UCN-4815A)
Discusses IC interface drivers for different types of displays, device technologies, packaging and future trends.
Sprague Electric Data Book WR-503 (11pp)

Drivers (cont)

10 **"Two-Digit Serial Input LED Display Driver Using TSC9404"**
(TSC9404)
Describes the use of the TSC9404 to minimize the number of I/O lines needed for a serial to 16-bit parallel output conversion. Application illustrates driver circuit for a two-digit, seven-segment LED display.
Teledyne Semiconductor AN-20 (2pp)

11 **"UC1637/2637/3637 Switched Mode Controller for DC Motor Drive"**
(UC1637, UC2637, UC3637)
Complete details on switched mode controllers for DC motors, including operating principles and methods of optimizing performance.
Unitrode U-102 (11pp)

"Using the MM5704 Keyboard Interface in Keyboard Systems"
See listing under (Digital) Encoders (National)

Encoders

12 **"60 Key Keyboard Encoder Applications Note"**
Describes implementation of keyboard scanning, key debouncing, key encoding, and key data availability indication functions.
Signetics AN-002 (8pp)

13 **"60-Key Keyboard Encoder"**
(82S105)
Explains the basics of keyboard encoder operation and the implementation of a 60-key encoder device utilizing the 82S105 bipolar programmable state machine.
Signetics AN-002 (6pp)

14 **"A Single Channel Codec Integrated Circuit"**
(ZNPCM1)
Includes tables of recommended operating conditions, electrical characteristics and pinouts for 24-pin DIP codec. Single-channel, 30-channel, and switching application examples include circuit and timing diagrams.
Ferranti (15pp)

15 **"AY5-3600 Keyboard Encoder Operation"**
(AY5-3600)
Characterizes the device and supplies a chart of the code assignments it uses.
General Instrument Bulletin 1402 (3pp)

16 **"Cascading Encoder-Decoder"**
(ED5, ED9, ED11, ED15, DC-7)
Explains how a simple, low-cost method can be implemented for addressing a large number of remote devices.
Supertex AN-4 (4pp)

17 **"Control Circuits for LED Scales with Linear and Logarithmic Behavior"**
(U237B, U247B, U257B, U267B)
Discusses circuit design for driving up to 10 LEDs in a linear or logarithmic bar display. Includes suggestions for using various colors for emphasizing selected parts of the display.
AEG-Telefunken Halbleiter Informationsdienst 8.78 (3pp)

18 **"Designing with the HD-0165 Keyboard Encoder"**
(HD0165)
The organization and truth table for this encoder are presented. The use of two circuits for encoding up to 256 keys, battery operation, examples of a teletypewriter keyboard and universal keyboard encoders are described.
Harris Semiconductor AN-204 (8pp)

INTERFACE

Encoders (cont)

1 **"ED Family of Remote Control Encoder/Decoders"**
(ED-5, ED-9, ED-11, ED-15)
Describes how to incorporate the ED-15, ED-11, ED-9, and ED-5 into user's system. Contains information covering various transmission media, as well as using ED with microprocessor interface.
Supertex 1 (9pp)

2 **"Exclusive-OR Code Converters"**
(DM7086)
Covers use of exclusive-OR gates to do Gray/Binary and Binary/Hamming code conversion.
National DB-2 (2pp)

3 **"Harris CMOS Manchester Encoder-Decoders"**
(HD15531, 15530, 6408)
Describes the advantages of Manchester II code over NRZ and four CMOS Manchester encoder-decoders operating at data rates up to 1 MHz.
Harris TB020 (2pp)

4 **"Keyboard Encoder and PROM/EPROM Application"**
(AY5-3600)
Describes use of the device in 64 key 4 mode and 90 key 4 mode applications. The device's binary outputs are organized to provide direct interface with a PROM/EPROM thus enabling the specific pattern format to be verified prior to a "custom" encoder commitment.
General Instrument Bulletin 1401 (4pp)

5 **"RS-232C Compatible Data Encryption Unit"**
(T7000, T7001)
Describes the design, operation and construction of a low-cost, RS-232C Compatible Data Encryption Unit used to encode digital data.

6 **"Using the MM5704 Keyboard Interface in Keyboard Systems"**
(MM5704)
Discusses features, operation, and programming of this device. Discusses use with the MM5702 timing and control chip of the Microprogrammable Arithmetic Processing System, and in a standard ASCII encode system.
National AN-52 (11pp)

Error Correction and Detection

7 **"Error Correction Codes"**
(2104A)
Examines different methods of error encoding, especially Error Correction Codes, to increase the reliability of a memory system.
Intel 1985 Memory Components Handbook AP-46 (12pp)

8 **"Error Detection and Correction Using SN54/74ALS632 through SN54/74ALS635"**
(SN54ALS632, SN74ALS632, SN54ALS633, SN74ALS633, SN54ALS634, SN74ALS634, SN54ALS635, SN74ALS635)
As the density of dynamic RAMs increases, so does the probability of errors. This note describes how these error correction and detection circuits ensure data integrity for 16-, 24-, and 32-bit systems.
Texas Instruments SDAA001 (8pp)

9 **"Error Detection and Correction Using SN54/74LS630 and SN54/74LS631"**
(SN54LS630, SN74LS630, SN54LS631, SN74LS631)
Summarizes the common types of error detection schemes, and describes the functions performed by the SN54/74LS630 and 631 EDAC chips. Also gives details on a memory board implementing the devices.
Texas Instruments SDLA003 (19pp)

Error Correction and Detection (cont)

10 **"Expanding The Versatility of the DP8400"**
(DP8400)
The addition of error correction capabilities to a memory requires extra memory, longer access times and additional control circuits. This note shows how the DP8400 can minimize the last two and, for some data word lengths, reduce the amount of extra memory required.
National Semiconductor AN-306 (12pp)

11 **"Memory System Reliability with ECC"**
(2117)
Presents step-by-step procedures for calculating memory system reliability.
Intel 1985 Memory Components Handbook AP-73 (45pp)

12 **"DP8400s in 64-Bit Expansion"**
(DP8400)
Provides information on the DP8400 error detection/correction chips parallel expansion method, which allows fast check-bit generation, error detection, and error correction. Includes diagrams for 64-bit configuration.
National Semiconductor AN-308 (8pp)

Line Circuits

13 **"Advanced Schottky Family of Bus Transceivers"**
(SN54/74ALS245, SN54/74'AS245, SN54/74'ALS620A, SN54/74'AS620-'623, SN54/74'ALS638-9A, SN54/74'AS638-9, SN54/74'AS640-645A)
Discusses applications of the Advanced Schottky family of bus transceivers in high-performance digital logic systems.
Texas Instruments SDAA005 (19pp)

MOS/Bipolar

"Applications of the RCA CD4093B COS/MOS Schmitt Trigger"
See listing under (Digital) CMOS (RCA)

14 **"COS/MOS Interfacing Simplified"**
(CD4000 Series)
Covers interfacing 4000A and B series with TTL, DTL, ECL, NMOS, PMOS, industrial and power control circuits, op amps and displays.
RCA ICAN-6315 (7pp)

"Interfacing COS/MOS with Other Logic Families"
See listing under (Digital) CMOS (RCA)

15 **"MM54C/MM74C Voltage Translation/Buffering"**
(MM54C901, MM54C902, MM54C903, MM54C904, MM74C901, MM74C902, MM74C903, MM74C904)
Interfacing PMOS to CMOS, CMOS to CMOS with different voltage levels, and CMOS to two standard TTL loads, are illustrated using 74C901 series devices.
National MB-18 (2pp)

INTERFACE

MOS/Bipolar (cont)

1 **"TTL/MOS/DTL Interfaces"**
Techniques for coupling the above devices and characteristics of the interfaces.
National MB-7 (2pp)

Multiplexers

2 **"New Multiplexers Simplify System Design"**
(HI-506L, HI-507L)
Gives applications for the HI-50XL family of latched, overvoltage protected multiplexers.
Harris AN-545 (8pp)

3 **"Single Supply Operation of PMI Multiplexers"**
(MUX-08, MUX-16, MUX-24, MUX-28, MUX-88)
Explains single supply operation as it applies to BIFET and CMOS multiplexers. Common applications are in microprocessor-based, single supply data acquisition systems.
Precision Monolithics AN-32 (2pp)

4 **"Specifying and Testing Multiplexers"**
Discusses time division multiplexers, including their basic parameters, temperature effects, and parameter testing.
Teledyne Philbrick AN-31 (4pp)

5 **"Understanding Crosstalk in Analog Multiplexers"**
Explains the three crosstalk components, Static (CT), Dynamic (DCT), and Adjacent Channel (ACCT) qualitatively and quantitively. The discussion tells what component(s) should be considered in various applications. The qualitative discussion uses both theoretical and empirical information to arrive at conclusions about what performance should be expected.
Precision Monolithics AN-35 (8pp)

Power Supplies

6 **"Line-Operated Switching Power Supplies"**
(LAS3840)
Discusses line-operated switchers, including how to eliminate transformer imbalance in double-ended switching converters and how to achieve fast switching speeds.
Lambda Semiconductors Applications Handbook V (26pp)

Switches

7 **"A New J-FET Structure—the VARAFET"**
(IT401, IT401A)
Lists advantages of an integrated J-FET switching circuit. Covers cell structure, electrical characteristics and device operation.
Intersil Application Bulletin AO22 (4pp)

8 **"Additional Information on the HI-300 series"**
(HI-300 series)
Discusses "ON" resistance, leakage currents, switching speeds, power supply requirements, internal switch operation and schematics, single supply operation, charge injection power supplies conditions and protective circuitry.
Harris Semiconductor AN-534 (5pp)

Switches (cont)

9 **"Analog CMOS Switches and Multiplexers"**
(AD7501, AD7503, AD7506, AD7507, AD7510, AD7511, AD7513, AD7516, AD7519)
A Selection Guide for Analog Devices line of multiplexers and switches. Includes data sheets, bonding diagrams, application information and terminology.
Analog Devices (40pp)

10 **"Analog Switch Applications in A/D Data Conversion Systems"**
(HI-200, HI-201, HI-300, HI-5900, HI-5901)
Discusses system configurations, analog switch types, CMOS switch selection guidelines and alternate uses of CMOS switches.
Harris Semiconductor AN-531 (4pp)

11 **"Analog Switches and Their Applications"**
Introduces basic semiconductor theory and discusses in detail FET analog switches. Various circuit combinations including driver cicuits, multiplexing, sample-and-hold circuits, N-path filters, and converters are also analyzed.
Siliconix $7.95 (324pp)

12 **"Analog Switches in Sample and Hold Circuits"**
Covers the effects of FET analog switch current handling capability on settling time and the effects of offset characteristics on sample and hold system accuracy. Describes inverting and non-inverting sample and hold circuits.
Siliconix AN74-2 (4pp)

13 **"Analog-Signal Commutation"**
(MM450, MM451, MM454, MM550, MM551, MM552)
Describes dc characteristics involved in MOS IC switching of analog signals when the signal input range varies between ± 10 v.
National Special Functions Handbook AN-33 (6pp)

14 **"Application of the MC3416 Crosspoint Switch"**
(MC3416)
Describes operation and use of this 4 X 4 balanced cross point switch in telephone applications including PABX. Appendices cover dielectric isolation, SCR action and testing.
Motorola AN-760 (15pp)

15 **"Applications of MOS Analog Switches"**
(LH0014, LH0019)
Discusses basic commutation circuits and describes the use of the LH0014 and LH0019 in linear amplifier applications, including reset functions and chopper circuits. Covers use of MOS switches as suppressed carrier double-sideband modulators and double-side-band demodulators. Also describes a circuit for a phase-locked loop AM-FM detector without tuned circuits.
National Special Functions Databook AN-38 (8pp)

16 **"Applications of the MT8804A 8x4 Analog Switch Array"**
(MT8804A)
Provides functional and parametric details of the MT8804A CMOS analog switch array, an 8x4 device with minimal interchannel crosstalk that lends itself to crosspoint switching applications.
Mitel Semiconductor MSAN-101 (16pp)

INTERFACE

Switches (cont)

1 **"CMOS Analog Switches—A Powerful Design Tool"**
Describes CMOS switch construction, characteristics and operating precautions. Applications include: a four channel switch to multiplex a scope input, a low pass filter with digitally controlled frequency response, an amplifier with programmable inputs and gain, a sample and hold circuit, a latching switch, high frequency switching and multiplexer systems.
Siliconix AN75-1 (16pp)

2 **"Common Questions Concerning CMOS Analog Switches"**
(HI-50XX)
Describes power supply considerations, input overvoltage protection and single supply operation.
Harris Semiconductor AN-532 (4pp)

3 **"DG300 Series Analog Switch Applications"**
(DG300, DG301, DG302, DG303, DG304, DG305, DG306, DG307)
Discusses performance characteristics and applications of the DG300 analog switch family. Includes circuit diagrams.
Siliconix AN76-6 (14pp)

4 **"Designing with Monolithic FET Switches"**
Describes MOSFET and JFET switch operation, including driver consideratins.
Siliconix TA73-2 (4pp)

5 **"Driver Circuits for the JFET Analog Switch"**
Discussion and comparison of resistor-coupled diode charge transfer, space transistor charge transfer, and switched resistor driver circuits for JFET switches.
Siliconix AN73-5 (12pp)

6 **"Electronic Switches in NMOS - Silicon Gate Technology"**
(U353M, U354M)
Lists performance parameters for NMOS silicon-gate transistor arrays of up to 5 devices for use as a relay replacement. Includes discussions on electrical principles and large signal operation.
AEG-Telefunken Halbleiter Informationsdienst 11.78 (6pp)

7 **"FETs as Analog Switches"**
General discussion of FET operation: detailed discussion of factors affecting switch performance, including specific load problems and applicable driver circuits.
Siliconix AN72-2 (12pp)

8 **"Features and Applications of RCA IC Zero-Voltage Switches"**
(CA3058, CA3059, CA3079)
Discusses zero-voltage switch operation in general. Operation primarily with thyristors in ac power control and switching applications, including electric heating, oven/broiler control, machine control, light control and industrial systems.
RCA ICAN-6182 (6pp)

9 **"Guide to Analog CMOS Switches and Multiplexers"**
Discusses the dynamic performance of CMOS switches, CMOS protection schemes, and switch/multiplexer terminology. Applications include a sample/hold amplifier, data acquisition system, commutating bandpass filter, and ramp generator.
Analog Devices (8pp)

10 **"High Speed Analog Switches"**
(AM1000, AM1001, AM1002)
Discusses time domain multiplexing, current mode multiplexing, the switching characteristics of the AM1000 JFET switches, and drive circuits.
National AN-53 (6pp)

Switches (cont)

11 **"High Speed MOS Commutators"**
(MM451, MM453, MM454)
Discusses the lowered threshold voltages in commutators, on and off resistances, switching speed, noise and high-frequency noise control.
National Special Functions Databook AN-28 (8pp)

12 **"IC Multiplexer Increases Analog Switching Speeds"**
(DG506, DG181)
Describes single and two level IC multiplexing systems, including the advantages and disadvantages of each.
Siliconix AN73-2 (5pp)

13 **"Interface ICs for Current-Sourcing Applications"**
(UDN-2580A, UDN-2956A, UDN-2980A, UDN-6100A)
Gives basic circuit design ideas using current-sourcing integrated circuits to interface with relays, printers, solenoids, V-F and LED displays.
Sprague WR-189 (10pp)

14 **"New High Speed Switch Offers Sub 50 ns Switching Times"**
(HI-201HS)
Describes applications of the HI-201HS in high-speed multiplexers, high-speed sample and hold, analog switch and op amp circuitry, integrator with start/reset, low pass filter with select break frequency and an amplifier with programmable gain.
Harris Semiconductor AN-543 (7pp)

15 **"PIN Diode Drivers"**
(DH0035, DH003C)
Describes PIN diode switching requirements and application of DH0035 as a driver. Includes discussion of anode ground and cathode ground designs and of repetition rate considerations.
National Special Functions Databook AN-49 (6pp)

"Some Applications of Programmable Power Switch/Amplifier"
See listing under (Linear) Power Control (RCA)

16 **"Switching High-Frequency Signals with FET Integrated Circuits"**
(DG133, DG171, DG181, DG200)
Discussion of DG133/171/181/200 as rf switches. Gives equivalent circuits. "Off" isolation and "On" performance data. Applications: control of video monitor and switching between two video cameras.
Siliconix AN73-3 (16pp)

17 **"The DG308 Digitally Switches Analog Signals"**
(DG308)
Describes a quad, single-pole, single-throw, latchproof CMOS analog switch. Includes applications in programmable gain circuits, peak detector circuits, integrators, and programmable filters.
Siliconix AN83-1 (8pp)

18 **"The IH5009 Series of Low Cost Analog Switches"**
(IH5009 Series)
Describes circuit parameters, logic compatibility, and virtual ground switching applications including 4-channel multiplexer, gain ranging circuit, gain programmable amplifier and 16-channel multiplexer.
Intersil Application Bulletin A0004 (8pp)

INTERFACE

Switches (cont)

1 **"The Versatile DG308 Supercedes 74C901/CD4066 Combination in New Analog Switch Designs"**
(DG308)
The DG308 has an internal level shifter that enables it to replace a pair of chips for switching bipolar analog signals in 4000 Series CMOS logic.
Siliconix DA81-1 (1p)

2 **"The Versatile DG308 Supercedes LM339/CD4066 Combination in New Analog Switch Designs"**
(DG308)
Switching bipolar analog signals in 4000 Series CMOS logic often requires a logic-level shifter between the positive-supply-voltage referenced logic and the plus-minus-supply referenced analog signals. This note shows how the DG308 simplifies logic interfacing by operating directly from a CMOS input.
Siliconix DA81-2 (1p)

3 **"Use CMOS Analog Switches More Effectively When You Consider Them As Circuits"**
(AD7510DI, AD7590DI)
Discusses low-frequency errors in CMOS analog switches due to resistances and current leakage. Focuses on methods of minimizing the effect of variable series-on resistance on circuit accuracy.
Analog Devices (2pp)

LINEAR

Active Filters

1 **"Active Filter Design with IC OP Amps"**
(XR3403, XR4136, XR4202, XR4558)
Provides table of transfer functions and equations for low, high and bandpass filters as well as filter responses for Bessel, Butterworth and Chebychev types. Working schematic of an active filter in a modem application included.
Exar AN-03 (8pp)

2 **"Band-Pass Active Filter with Easy Trim for Center Frequency"**
(1421)
Presents a method of trimming a band-pass active filter circuit to give the exact center frequency desired using just a single resistor trim.

"Function Circuits, Design and Applications"
See listing under (Linear) General (Burr-Brown)

Amplifiers, Operational

3 **"Compensation Techniques for Use with the NE/SE5539"**
(NE5539, SE5539)
Gives details on a pair of ultrahigh-frequency op amp ICs and methods of providing external compensation for gains below 17 dB.
Signetics AN-140 (8pp)

4 **"High-Performance Audio Applications of the LM833"**
(LM833)
Presents methods by which the LM833 dual op amp can deliver improved audio performance.
National Semiconductor AN-346 (9pp)

5 **"Operational Amplifier Parameter Definition and Measurement Guide"**
Defines the parameters involved in op amp specification and gives the fundamentals necessary to duplicate testing procedures for accurate measurement of those parameters.
Teledyne Philbrick AN-23 (8pp)

Amplifiers, Current

6 **"Application of the LH0002 Current Amplifier"**
(LH0002)
Circuit operation. Describes uses in a differential input-output op amp, booster amplifier, level shifter, pulse transformer driver, and transmission line driver.
National Special Functions Databook AN-13 (4pp)

Amplifiers, Instrumentation

7 **"A User's Guide to IC Instrumentation Amplifiers"**
(AD522)
Explains where and when an instrumentation amplifier may best be employed. Provides basic theory, specifications and examples of use.
Analog Devices (12pp)

8 **"Applications of Wide-Band Buffer Amplifiers"**
Describes high and low frequency operation of several wide-band, high-current, unity-gain buffer amplifiers. Discusses application techniques and illustrates their use in driver, sample and hold amplifier, and active filter circuits.
National Semiconductor AN227 (16pp)

Amplifiers, Instrumentation (cont)

9 **"Instrumentation Amplifiers—Versatile Differential Input Gain Blocks"**
(3660)
Describes the feaures and general operation of instrumentation amplifiers. Depicts their use in bridge circuits, in reducing ground loop interference, and in driven guard input circuits.
Burr-Brown AN-75 (6pp)

10 **"Isolation and Instrumentation Amplifiers Designers Guide"**
Primer on the operation, application, and selection of isolation and instrumentation amplifiers.
Analog Devices (20pp)

11 **"OP-10 Instrumentation Amplifier CMRR Versus Frequency Improvement"**
(OP-10)
Discusses optimization of CMRR versus frequency response of a three op amp instrumentation amplifier.
Precision Monolithics AB-2 (1pp)

12 **"Testing of Analog-to-Digital Converters"**
Discusses methods, circuits and instruments for testing accuracy of A/D converters with conversion times under 100μs; includes a circuit for testing high-speed converters with less than 10μs conversion times.
Burr-Brown Research An-100 (6pp)

13 **"The Instrumentation Amp VS the Op Amp—Which, When, & How to Use Them"**
(741)
Discusses four design options: a general-purpose op amp connected as a differential amplifier, an instrumentation amplifier built from several general-purpose op amps, a purchased modular or IC instrumentation amplifier, and a purchased instrumentation amplifier in a box.
Teledyne Philbrick AN-29 (5pp)

14 **"Theory and Applications of Logarithmic Amplifiers"**
(LM331A, LM329)
Describes the design and use of logarithmic and exponential signal processing techniques in instrumentation applications.
National Semiconductor AN-311 (6pp)

Amplifiers, Isolation

15 **"Applications Guide for Isolation Amplifiers and Signal Conditioners"**
(AD289, AD293, AD294A, AD295, AD290A, AD292A, AD284, AD286)
Gives tutorial information on the importance of isolation and the use of isolation amplifiers and signal conditioners in industrial, instrumentation, and medical applications.
Analog Devices AN-G813b-25-3/85 (19pp)

16 **"The Key to Understanding Sources of Error in the ISO100 Isolation Amplifier"**
(ISO100)
Some applications of the ISO100 isolation amplifier require error correction. This note describes how to quantify the effects of errors and identify the most appropriate means of correction.
Burr-Brown AN-126 (8pp)

APP. NOTE DIRECTORY

LINEAR

Amplifiers, Operational

2 **"A High Impedance Hysteresis Circuit"**
(HA-2520, HA-2620)
Describes HA-2520/HA-2620 used as a hysteresis amplifier and covers output voltage limiting.
Harris Semiconductor AN-505 (2pp)

3 **"A Simple Comparator Using the HA-2620"**
(HA-2620)
Describes op amp comparator circuit capable of driving approximately ten logic gates.
Harris Semiconductor AN-509 (1pp)

4 **"A Simple Square-Triangle Waveform Generator"**
(HA-2510, HA-2600, HA-2620)
Circuit for waveform generator using three op amps.
Harris Semiconductor AN-510 (2pp)

5 **"An IC Amplifier User's Guide to Decoupling, Grounding, and Making Things go Right for a Change"**
Contains considerable information on good grounding practices and op amp decoupling.
Analog Devices (8pp)

6 **"An IC Operational-Transconductance-Amplifier (OTA) with Power Capability"**
(CA3094)
Describes what an OTA is and the characteristics of the device. Outlines its use in such consumer applications as a power amplifier and a companion RIAA preamplifier.
RCA ICAN-6077 (12pp)

7 **"Analog Products: Features and Applications"**
Discusses the use of op amps, buffers, and voltage references in instrumentation amplifiers, I/V converters, current transmitters, precision rectifiers, and Wien-bridge rectifiers.
Precision Monolithics Inc. (23pp)

8 **"Analysis and Design of the Op/Amp Current Source"**
Develops expressions for the transfer function and output impedance of voltage controlled op amp current source using both ideal and non-ideal models. Discusses effects of parameter and temperature variations on performance.
Motorola AN-587 (7pp)

9 **"Application of the CA080 BiMOS Op Amp Series in Low-Cost Instruments and Audio Circuits"**
(CA080, CA081, CA082, CA083)
Describes the characteristics of CA080 operational amplifiers and their benefits when used in audio preamplifiers, notch filters, low-current amplification circuits, and ac voltmeter front ends.
RCA ICAN-6933 (2pp)

10 **"Applications of Operational Amplifiers"**
Presents op amp applications including designs for signed controls, processors, waveform generators, and special purpose circuits. Provides information on error sources, circuit values, and design equations.
Burr-Brown $33.50 (220pp)

11 **"Applications of a Monolithic Sample-and-Hold/Gated Operational Amplifier"**
(HA-2420, HA-2425)
Describes HA-2420/2425 circuit. Applications include various track-and-hold/sample-and-hold configurations, an A/D converter, a demultiplexer, an integrated-hold-reset amplifier, a gated operational amplifier, and a peak detector with reset.
Harris Semiconductor AN-517 (8pp)

Amplifiers, Operational (cont)

12 **"Applications of the CA3080 and CA3080A High-Performance Operational Transconductance Amplifiers"**
(CA3090, CA3080A)
This device has an additional control terminal for flexibility. Circuit operation is discussed. Applications covered: communications and industrial systems, modulators, multiplexers, sample and hold circuits, gain control circuits, and micropower comparators. Appendix discusses current mirrors.
RCA ICAN-6668 (16pp)

13 **"Applications of the Gated Linear Amplifier ZN424"**
(ZN424)
Details the operation of the ZN424 and describes a variety of specific applications including filters, comparators, and peak hold circuits.
Ferranti (46pp)

14 **"Applications of the RCA CA3048 Integrated Circuit Amplifier Array"**
(CA3048)
Discusses operating parameters for this 4-amplifier array and covers applications, including Hartley and Colpitts oscillators, an astable multivibrator, four-channel linear mix, and a gain-controlled amplifier.
RCA ICAN-4072 (8pp)

15 **"Applying Dual and Quad FET Op Amps"**
(LF347, LF353)
Shows how dual and quad FET op amps can be used as a temperature controller, high-temperature thermometer, sine wave oscillator, voltage reference, A/D converter and current amplifier.
National Semiconductor AN-262 (7pp)

16 **"Applying a New Precision Op Amp"**
(LM11)
Details characteristics of the LM11 which combines low offset voltage with low bias current. Applications include meters, differential instrumentation amplifiers and coupling with existing fast op amps.
National Semiconductor AN242 (16pp)

17 **"Combine Two Op Amps to Avoid the Speed Accuracy Compromise"**
(3521)
Discusses interconnecting low drift and wideband op amps to form a composite op amp.
Burr-Brown AN-64 (2pp)

18 **"Considerations for Low-Noise Applications"**
(MA-106, MA-333)
Describes a low-noise single-ended input and output preamplifier and JFET op amps. Also discusses several methods of reducing system noise.
Analog Systems AN-1004 (1pp)

19 **"Current Limiting the MA-329"**
(MA-329)
Shows how to select valves of external resistors to determine negative and positive output-current limits.
Analog Systems AN-1005 (1pp)

Amplifiers, Operational (cont)

1 **"D.C. Servo Motor Systems Using the ICH8510"**
See listing under (Linear) Amplifiers, Power (Intersil)

2 **"Design of a Unique Precision Controlled Current Source"**
(3500)
Diagrams a current source using an op amp and a complementary FET pair to form a current source with differential input and bipolar current output.
Burr-Brown AN-74 (2pp)

3 **"Designing Femtoampere Circuits Requires Special Considerations"**
(1702)
Discusses key design considerations for high-impedance, low-current applications of measurement amplifiers.
Teledyne Philbrick AN-3 (4pp)

4 **"Designing Junction FET Input Op Amps"**
(U401, 421 Series)
Discusses the advantages, behavior and design of JFET input operational amplifiers.
Siliconix AN74-3 (17pp)

5 **"Designing with Operational Amplifiers: Application Alternatives"**
Amplifier improvement techniques, signal analyzers, signal conditioners, absolute value circuits, signal generators, computing circuits, data transmission circuits, as well as test and measurement circuits are discussed. Circuit designs and explanations of circuit operation are provided.
Burr-Brown $29.50 (220pp)

6 **"Digital Auto-Zeroing Extends the Capabilities of Semi-Custom CMOS Operational Amplifiers"**
Describes the use of a digital auto-zero technique to reduce the worst-case offset voltage of CMOS metal-gate array op amps to approximately 1 mV. Discusses application of the technique to a heart-rate detector chip.
Telmos AN2 (2 pp)

7 **"Digital Nulling of OP-05 and SSS725"**
(DAC-08, OP-05, SSS725)
Shows digitally controlled offset nulling achieved by imbalancing the first stage collector currents of the op amp with a D/A.
Precision Monolithics AB-3 (1pp)

8 **"Diode-Connected FET Protects Op Amps"**
(BB3528CM)
Shows how to use an FET to protect an op amp from overload in a circuit that measures dielectric properties.
Burr-Brown AN-106 (1pp)

9 **"Fast Settling Operational Amplifier"**
(HA-5190, HA-5195)
Covers operation at elevated temperatures, frequency compensation techniques and performance enhancement methods for op amps used in pulse, RF and video amplifiers, waveform generators, data requisition and instrumentation.
Harris Application Note 525 (4pp)

10 **"HA-5170 Precision Low Noise J-FET Input Operational Amplifier"**
(HA-5170)
Discusses internal design and technology, J-FET noise and trimming of offset voltage. Applications include single op amp instrumentation amplifier, sine wave oscillator, high impedance transducers interface, current source/sink and curent sense circuits.
Harris Semiconductor AN540 (4pp)

Amplifiers, Operational (cont)

11 **"HA-909 Operational Amplifier"**
(HA-909, HA-911)
Discusses applications as a unity gain breadboard op amp, servo preamplifier, high-Q bandpass filter, Wien bridge oscillator, and phase-delay filters.
Harris Semiconductor AN-501 (2pp)

12 **"HA-909 Operational Amplifiers Performance Tailoring"**
(HA-909, HA-911)
Discusses how to optimize HA-909's offset, power dissipation, bandwidth, large signal bandwidth, slew rate, transient response, and stability with reactive loads.
Harris Semiconductor AN-502 (3pp)

13 **"High-Frequency Oscillations and Analog ICs"**
Discusses the various sources of instability in op amps and causes and solutions for parasitic oscillations.
Analog Systems AN-1001 (1pp)

14 **"How To Select Output Amplifiers for CMOS MDACs"**
(AD542, AD544)
Discusses unique problems of amplifying CMOS, multiplying-DAC outputs. Provides performance comparison of two op amp families to aid in selection.
Analog Devices (4pp)

15 **"How to Select Operational Amplifiers"**
Selecting the right op amp for a specific application requires a clear knowledge of design objectives and a firm understanding of what published specifications mean. This note puts the many decision factors into perspective and aids the designer in making meaningful buying decisions.
Analog Devices Application Notes, Vol. 1, 21-3 (6pp)

16 **"How to Test Basic Operational Amplifier Parameters"**
Describes the many pitfalls involved in testing op amp specifications of offset voltage, input bias current, open loop voltage gain, frequency response and CMRR. Includes test-circuit diagrams.
Analog Devices (3 pp)

17 **"IC Power Op Amps (Revised)"**
(μA759, μA791)
Discusses evolution of power op amps with specific reference to the μA759 and μA791. Included are applications to voltage regulators, audio amplifiers and servo motor drivers.
Fairchild AN347 (8pp)

18 **"L144 Programmable Micro-Power Triple Op Amp"**
(L144)
Describes device function, elements of programming, effects of slew rate limiting. Applications discussed include instrumentation amplifier, tone detectors, triple-amplifier active filters, and a micropower double-ended limit detector.
Siliconix AN73-6 (6pp)

19 **"Linear Power Operational Amplifiers"**
(ULN-3751, 3753, 3755)
Gives specifications and applications for a line of single and dual power op amps.
Sprague Electric W-206 (7pp)

20 **"Linearity and the MA-332"**
(MA-332)
Discusses the linearity characteristics of the MA-332 op amp.
Analog Systems AN-1002 (1pp)

APP. NOTE DIRECTORY

LINEAR

Amplifiers, Operational (cont)

1 **"Low Power Operational LH0001 Amplifier"**
(LH0001)
Operation of circuit offering 0.2 mv typical offset voltage at 25°C and quiescent supply currents in 100 μA range.
National Linear Applications Handbook AN-10 (4pp)

2 **"Measurement of Burst (Popcorn) Noise in Linear Integrated Circuits"**
Discusses "pass-fail" criteria and describes a test set-up for measuring burst noise. The set-up includes a high gain amplifier-filter, a bipolar comparator, and a counter-latch-timer control circuit.
RCA ICAN 6732 (8pp)

3 **"Micro Power Applications Collection"**
(OP-20)
Discusses the OP-20 Micro-Power Operational Amplifier as a combination of precision performance, ultra-low supply current and single power supply operation.
Precision Monolithics AN-34 (4pp)

4 **"Micropower Op Amp Family"**
(HA-5141, RC4132, OP-20, LM10C, LM741)
Compares speed/power relationships in op amps, describing applications in a remote sensor loop transmitter, bar-code scanner, monostable multivibrator, and low-voltage Wein bridge oscillator.
Harris AN-544 (6pp)

5 **"Minimization of Noise in Operational Amplifier Applications"**
(OP-07)
Describes internal and external sources of noise. Helps to locate noise sources by frequency. Gives examples of noise calculation using the OP-07 as an example.
Precision Monolithics AN-15 (11pp)

6 **"Monolithic Sample/Hold Combines Speed and Precision"**
(HA-5320)
Describes electrical specifications for the HA-5320 sample/hold amplifiers, including explanation of error sources, and HA-5320 applications.
Harris Semiconductor AN-538 (7pp)

7 **"New Design Techniques for FET Op Amps"**
(LH0022, LH0022C, LH0042C, LH0052, LH0052C)
Gives parameters for LH0022, LH0042 and LH0052 operational amplifiers. Discusses rationale for FETs in these devices, describes the circuits. Describes application as voltage followers, integrators, sample/hold amplifiers, comparators, instrumentation and charge amplifiers.
National Special Functions Databook AN-63 (12pp)

8 **"Operational Amplifier Noise Prediction"**
Provides a noise model, a procedure for computing output noise, and spot noise curves for many Harris amplifiers.
Harris Semiconductor AN-519 (10pp)

9 **"Operational Amplifier Stability: Input Capacitance Considerations"**
(HA-2600, HA-2605)
Discusses overcoming stray capacitance in op amps, such as the HA-2600.
Harris Semiconductor AN-515 (2pp)

10 **"Operational Amplifiers—Design and Application"**
Covers basic theory, amplifier design techniques and applications.
Burr-Brown $33.50 (470pp)

Amplifiers, Operational (cont)

11 **"Power Operational Amplifiers—General Operating Considerations"**
Provides guidelines for operation of power op amps, including discussions of stability, current limit adjust, heat sinking and grounding.
Apex Microtechnology AN-1 (1p)

12 **"Power Operational Amplifiers—Optoelectronic Position Control"**
(PA-07)
Discusses techniques for using power op amps for optoelectronic position control.
Apex Microtechnology AN-2 (2pp)

13 **"Precision Digital Gain Set Applications"**
(LF13006, LF13007)
Outlines several digital gain set applications that provide programming capability in circuits such as filters, precision references, and current sources.
National Semiconductor AN-344 (6pp)

14 **"Precision Digital Gain Set Applications"**
(LF13006, LF13007)
Outlines several digital gain set applications that provide programming capability in circuits such as filters, precision references, and current sources.
National Semiconductor AN-344 (6pp)

15 **"Precision Magnetic Deflection"**
Explains how power op amps provide better precision than single-element drives for current control and other advantages.
Apex Microtechnology (4pp)

16 **"Precision Op Amp on a Semicustom Chip"**
(MONOCHIP)
Discusses building an op amp on a semicustom chip with performance comparable to standard precision units. Covers all phases of design and thermal considerations as well.
Interdesign APN-9 (10pp)

17 **"Precisional Operational Amplifier"**
(μA714)
Describes operation of the μA714 and compares key parameters with other precision op amps. Discusses applications including use as a replacement for chopper-stabilized amplifiers.
Fairchild AN348 (10pp)

18 **"Protect Op Amps from Overloads"**
Discusses protection from power-supply faults, keeping input voltages at safe levels, and limiting output currents.
Burr-Brown AN-60 (3pp)

19 **"Protecting Inputs and Outputs"**
Protecting Inputs and OutputsLINEARAmplifiers, OperationalAnalog Systems AN-1006 (1pp)
Analog Systems AN-1006 (1pp)
Describes methods of protecting signal inputs to op amps to prevent damage from excessive current.
Analog Systems AN-1006 (1pp)

20 **"Simple Precision Millivolt Reference Uses No Zeners"**
(OP-05)
Describes −3.5 mv to 3.5 mv reference built with instrumentation op amp and a potentiometer.
Precision Monolithics AN-10 (1pp)

LINEAR

Amplifiers, Operational (cont)

1 **"Some Recent Application Notes on Operational Amplifiers"**
"How to Select Operational Amplifiers" Discusses selection of the right op amp for a specific application. Includes consideration of gain/bandwidth, offset and drift, current amplifiers, and steady-state vs transient applications.
Analog Devices (6 pp)

2 **"Test Procedures for Operational Amplifiers"**
Circuit for measuring offset voltage, bias current, offset current, open loop voltage gain, common mode and power supply rejection ratios, output voltage/current, power dissipation, and making continuity checks.
Harris Semiconductor AN-508 (2pp)

3 **"The 8007—A High Performance FET-Input Operational Amplifier"**
(ICL8007)
Circuit description, applications as log and antilog amplifiers, photocell amplifier, peak detector, sample and hold circuits, high impedance buffer, and Wien Bridge oscillator.
Intersil Application Bulletin A005 (6pp)

4 **"The HA-2400 PRAM Four Channel Operational Amplifier"**
(HA-2400, HA-2405)
This is a programmable input stage, operational amplifier. This note describes its applications including an analog multiplexer with buffered input and output, an inverting or non inverting amplifier with a programmable gain, a sine wave oscillator with programmable frequency, and a track and hold/sample and hold circuit.
Harris Semiconductor AN-514 (8pp)

5 **"The HA-2530/2535 Wideband High Slew Inverting Amplifier"**
(HA-2530, HA-2535)
Briefly discusses internal circuit. Shows how closed-loop frequency response can be predicted. Describes application as a fast settling coaxial driver, a 10 MHz coaxial line driver, a wide range signal separator, a high frequency triangular wave generator, and a current-to-voltage converter.
Harris Semiconductor AN-516 (11pp)

6 **"The HA-2900 Monolithic Chopper Stabilized Amplifier"**
(HA-2900)
Discusses offset voltage and current drift and chopper stabilization, then describes the circuit. Applications include a high impedance differential instrumentation amplifier, use as an integrator, and several wide bandwidth configurations.
Harris Semiconductor AN-518 (8pp)

7 **"The ICL7650: A New Era in Glitch-Free Chopper Stabilized Amplifiers"**
Discusses the development of a monolithic CMOS chopper-stabilized amplifier that uses a single full-time main amplifier to eliminate output glitches and area- and charge-balancing on the input-switching network to minimize input switching glitches. Includes schematics, operating characteristics and application techniques.
Intersil A053 (16 pp)

8 **"The Monolithic Op Amp: A Tutorial Study"**
Detailed paper on the design of IC operational amplifiers.
National Linear Applications Handbook (18pp)

Amplifiers, Operational (cont)

9 **"The OP-07 Ultra-Low Offset Voltage Op Amp—A Bipolar Op Amp that Challenges Choppers, Eliminates Nulling"**
(OP-07)
Describes circuit design, compares performance to other devices. Covers application in a voltage reference, a high accuracy buffer, a D/A test system, a composite summing amplifier, an absolute value circuit, an analog computer building block, and as a thermocouple amplifier.
Precision Monolithics AN-13 (12pp)

10 **"Typical Operational Amplifier Applications for Modelling, Measuring, Manipulating, and Much Else"**
Describes op amp applications such as a precision variable voltage source, floating supply bridge amplifier, adding subtractor, three-term controller, floating source preamplifier, and current-to-voltage transresistor.
Teledyne Philbrick AN-7 (1pp)

11 **"Understanding and Using the CA3130, 3130A, and 3130B BiMOS Operational Amplifiers"**
(CA3130, CA3130A, CA3130B)
Summarizes the characteristics and unique features of the CA3130 Series of BiMOS op amps. Sample applications include a voltmeter with high input resistance, thermocouple temperature control with zero-voltage load switching, a photodiode current-to-voltage converter, and a precision voltage-controlled oscillator.
RCA ICAN-6386 (5pp)

12 **"Using HA-2539 Very High Slew-Rate Wideband Operational Amplifier"**
(HA-2539)
Includes prototyping considerations, output short-circuit protection, offset voltage adjustment, frequency compensation, composite amplifier scheme and dc error reduction.
Harris Semiconductor AN541 (4pp)

13 **"Using Op Amps in Low Noise Applications"**
Discusses shot noise and noise from source resistances.
Burr-Brown AN-68 (2pp)

14 **"Using the HA-2541"**
(HA-2541)
Describes the HA-2541, a fast, unity gain stable, monolithic op amp, along with prototyping and thermal considerations, and discusses applications in a variety of amplifier types.
Harris AN-550 (6pp)

15 **"Using the HA-2542"**
(HA-2542)
Discusses prototyping guidelines, heat sinking, performance enhancements, and applications of the HA-2542 amplifier.
Harris AN-552 (5pp)

16 **"Using the IT500 Family to Improve the Input Bias Current of BIFET Op Amps"**
(IT500)
Shows how the variation of input bias current with input voltage in BIFET op amps can be reduced by using the IT500 as a preamplifier.
Intersil A050 (1 p)

17 **"Working with High Impedance Op Amps"**
Describes a low offset voltage op amp that also has low input current error, especially at high temperatures. Discusses techniques for eliminating problems with high impedance circuits.
National Semiconductor AN241 (6pp)

LINEAR

Amplifiers, Power

1 **"D.C. Servo Motor Systems Using the ICH8510"**
(ICH8510)
Explains servo systems in general and use of the device for velocity control, position control, and torque control in particular.
Intersil Application Bulletin A026 (4pp)

2 **"Power D/A Converters Using the IH8510"**
See listing under (Interface) Converters (Intersil)

3 **"TBA810S/AS Thermally Protected Power Amplifier"**
(TBA810)
Description of the device followed by discussion of its performance. Also shows examples of use in tone control, TV, radio and tape playback channel applications.
SGS-ATES Technical Note 120 (16pp)

4 **"TBA820 Two-Watt Monolithic Audio Amplifier"**
(TBA820)
Lists main electrical characteristics of device and presents typical applications.
SGS-ATES Technical Note 114 (11pp)

5 **"TCA830S-Thermally Protected Audio Power Amplifier"**
(TCA830S)
Briefly describes how the device functions followed by an examination of performance under different supply and load conditions. Portable AM/FM receiver, intercom, and magnetic tape player circuits are shown.
SGS-ATES Technical Note 126 (15pp)

6 **"TCA940 Fully Protected Audio Amplifier"**
(TCA940)
Presents temperature and output short circuit protection features of the device along with a description of its performance. Illustrates use of the device in a stereo amplifier and an equalized amplifier for magnetic pickups.
SGS-ATES Technical Note 119 (15pp)

7 **"TDA2020/TDA2010 HI-FI Monolithic Amplifiers"**
(TDA2020, TDA2010)
Describes these power amplifiers and how to apply them.
SGS-ATES Technical Note 130 (12pp)

Amplifiers, Preamplifier

8 **"DC Coupled Tape Head Pre-amplifiers"**
(LM1897, 1837)
Explains the problems eliminated by DC coupling tape heads and the advantages of the two-amplifier per channel design of two preamp ICs.
National Semiconductor AN-407 (7pp)

Amplifiers, RF

9 **"A High Gain Integrated Circuit RF-IF Amplifier with Wide Range AGC"**
(MC1590G)
Describes operation and Y parameters of the MC1590G. Applications include mixer plus IF, video, single and two-stage RF amplifiers.
Motorola AN-513 (10pp)

10 **"A Two-Stage 1kW Solid-State Linear Amplifier"**
Discusses the design of 50W and 300W linear amplifiers for the 1.6 to 30 MHz frequency band.
Motorola AN-758 (16pp)

Amplifiers, RF (cont)

11 **"Application of the RCA CA3028A and CA3028B Integrated-Circuit RF Amplifiers in the HF and VHF Ranges"**
(CA3028A, CA3028B)
Describes circuits and operating modes. Covers use as an RF amp, autodyne converter, IF amp, and limiter.
RCA ICAN-5337 (10pp)

12 **"Logarithmic IF Strips Using Monolithic Integrated Circuits"**
(SL521)
Describes operation of this log amplifier in successive detection type IF strips with center frequencies from 10 to 100 MHz. Covers broadband and narrow band circuits and describes in detail a 60 MHz wide-range logarithmic amplifier.
Plessey Semiconductor Technical Communication (3pp)

13 **"Logging IF Strip"**
(SL1521)
Describes a logging IF strip using Plessey IC's.
Plessey Semiconductor (2pp)

Amplifiers, Special Purpose

14 **"Applications for Models 4350/4351 and 4362/4363 Logarithmic Amplifiers"**
(4350, 4351, 4362, 4363)
Dicusses methods of changing sensitivity factors and reference voltage and current in logarithmic amplifiers.
Teledyne Philbrick AN-14 (4pp)

15 **"Designer's Guide to Logarithmic Amplifiers"**
(4351)
Summarizes the basic theories involved in using transistors and op amps to perform accurate, wide-range logarithmic conversion. Also discusses the practical considerations of designing circuits using logarithmic devices.
Teledyne Philbrick AN-12 (10pp)

16 **"How to Specify Parameters of Nonlinear Circuits"**
(4351)
A detailed specifier's guide for amplifiers with stable nonlinear outputs, this note describes the common problems such amps can overcome.
Teledyne Philbrick AN-15 (5pp)

17 **"Logarithmic Amplifiers and Operators Parameter Definition and Measurement"**
(4350, 4351, 4362, 4363)
Explains major operating parameters of logarithmic amplifiers and describes relevant testing methods.
Teledyne Philbrick AN-27 (3pp)

18 **"Specifying and Testing Sample-Hold Amplifiers"**
Covers the basic operating parameters of S/H amplifiers and parameter testing procedures.
Teledyne Philbrick AN-30 (5pp)

19 **"Using the 8048/8049 Monolithic Log-Antilog Amplifier"**
(ICL8048, ICL8049)
Describes in detail the operation of the 8048 log amp, and its counterpart, the 8049 antilog amp.
Intersil A007

LINEAR

Amplifiers, Video

1 **"Gated Video Amplifier Applications Using the MC1545"**
(MC1545)
Reviews the operation of the MC1545 and discusses some applications for the device. Included are several modulator types, temperature compensation of the active gate, AGC, gated oscillators, FSK systems, and single-supply operation.
Motorola Semiconductor AN-491 (16pp)

"Television Video IF Amplifier Using Integrated Circuits"
See listing under (Linear) Consumer, TV (Motorola)

2 **"The SG1401 Video Amplifier"**
(SG1401, SG3401)
Describes a number of applications for SG1401-SG3401 general-purpose, wide-frequency-range amplifiers.
Silicon General AN-SG1401 (2pp)

3 **"Video Applications"**
(HA-5190, HA-5195)
Discusses power supply requirements and temperature considerations, and provides design and prototyping tips for using an op amp as a video amplifier.
Harris AN526 (5pp)

Amplifiers, preamplifier

4 **"Audio Preamplifiers"**
(MONOCHIP)
Provides schematics and parameters for using the device in three separate preamplifier configurations.
Interdesign APN-11 (6pp)

Arrays

5 **"Application of the RCA CA3018 Integrated Circuit Transistor Array"**
(CA3018)
Array of two isolated silicon epitaxial transistors plus two transistors with emitter-base common connections, suited for closely matched device requirements or interconnections with non-integrable components. Applications covered include IF-RF, video, AGC, audio and dc amplifiers.
RCA ICAN-5296 (5pp)

6 **"Application of the RCA CA3019 Integrated-Circuit Diode Array"**
(CA3019)
Describes circuit configuration, operating characteristics and applications, including balanced modulator, high-speed gates, balanced mixer, and a ring modulator.
RCA ICAN-5299 (6pp)

7 **"Super-Matched Differential Pair"**
(MONOCHIP)
Illustrates matching capabilities of interconnected NPN devices on the Monochip family. The circuit described consists of 2 transistors implemented by interconnecting 18 small geometry devices in parallel.
Interdesign APN-20 (5pp)

8 **"Using the SL362C Low Noise Transistor Pair"**
(SL362)
Provides general data on noise performance plus application in DC to 200 MHz amplifier.
Plessey Semiconductor Technical Communication (4pp)

Communications

9 **"2400 BPS DPSK Modem System Using the MC6172/6173"**
(MC6172, MC6173)
Describes the design procedure for implementing a low-cost modem system using the MC6172/6173 chip set as a core.
Motorola Semiconductor AN-870 (14pp)

10 **"A CB Audio Compression System"**
(MONOCHIP)
Describes using the device to provide an on-chip regulator, audio pre-amp, AGC amplifier, DC volume control, and a headphone driver amplifier for use in a CB transceiver.
Interdesign APN-10 (7pp)

11 **"A Four-Wire Full Duplex 1200 Baud Modem Implementation Using the MC145450 and the MC145415"**
(MC145450, MC145415)
Outlines how a 1200-baud four-wire modem may be used as a basis for a Bell 202T modem where four dedicated wires are available for long-distance communications.
Motorola AN-904 (4pp)

12 **"A Manchester-Coded Fiber-Optic Serial Data Link Interfacing Parallel Data Buses at Data Rates to 200 kbytes/sec"**
(FOE300B, FOR361B, DP8342, DP8343)
Describes a fiber optic data link that accepts parallel data at rates up to 200 kbytes/sec and transmits serial data over distances to 1 km.
National Semiconductor AN-323 (8pp)

13 **"A Monolithic Subscriber Line Interface Circuit"**
(HC-5502A, HC5504)
Gives a functional description and pin descriptions of PBX SLICS.
Harris Semiconductor AN-533 (6pp)

14 **"An Introduction to Mitel DTMF Receivers"**
(MT8865, MT8870, MH88210, MH88305)
Illustrates the cost, performance and real-estate benefits of the DTMF signaling medium for conventional dialing applications, as well as for certain data transmission and remote control applications.
Mitel Semiconductor MSAN-106 (7pp)

15 **"Applications of Hybrid Active Filters to Telecommunication Systems"**
(AF133, AF134)
Transmit and receive filters in 8 kHz sample rate PCM systems such as D3 channel bank and band splitting filters for DTMF receivers are described, and their application to these systems is discussed.
National AN-221 (4pp)

16 **"Applications of the MT8860 Family of DTMF Receivers"**
(MT8860, MT8862, MT8863, MT8865, MH88210, MH88305)
The MT8865 filter and MT8860 decoder can be used to update rotary-dial telephones by tone-to-pulse conversion and to create a call restrictor for a private telephone or private branch exchange. Applications include the remote control of test, measurement, and industrial equipment, and of home appliances, alarm systems, and unattended message recorders.
Mitel Semiconductor MSAN-105 (7pp)

17 **"Applications of the MT8870 Integrated DTMF Receiver"**
(MT8870)
Discusses the operation of DTMF receivers in general and the MT8870 in particular. Includes several applications in DTMF receiver systems, mobile radios, and remote control systems.
Mitel MSAN-108 (27pp)

LINEAR

Communications (cont)

2 **"CMOS 300 Baud Modem"**
(MM74HC942)
Discusses the advances in CMOS and circuit design technology that have made possible a high-performance, low-power, Bell 103 compatible single-chip modem.
National Semiconductor AN-349 (6pp)

3 **"Current Sources"**
(MK50992)
Discusses the use of constant-current sources in pulse dialer application circuits.
Mostek Applications Brief (2pp)

4 **"DTMF Receiver System"**
(MK5102, MK5103)
Describes the construction of a DTMF receiver system.
Mostek Applications Brief (2pp)

5 **"Data Conversion, Switching, and Transmission using the Intel 2910A/11A Codec and 2912 PCM Filter"**
(2910A/2911A, 2912)
Provides general telecommunications concepts and terminology. Includes technical reviews of codecs and PCM filters and gives application guidelines.
Intel AP-64 (40pp)

6 **"Delta Modulation for Voice Transmission"**
Provides introduction to delta modulation basics and describes various applications, including telecommunications and audio delay lines, in which it can be used.
Harris Semiconductor AN-607 (6pp)

7 **"Design Considerations for a DTMF Receiver System Using the MK5102-5"**
(MK5102-5)
Describes all of the requirements for building a high-quality DTMF receiver using the MK5102-5 DTMF decoder and hybrid filters, including output formatting, receiver testing, input squaring, squaring circuit-to-decoder coupling, and power supply and band separation filter considerations.
Aptek Microsystems (9pp)

8 **"Designing Second-Generation Digital Telephony Systems Using the Intel 2913/14 Codec/Filter Combochip"**
(2913, 2914)
Describes the features and capabilities of the 2913 and 2914 codec/filter combochips, and relates these capabilities to the design and manufacture of transmission and switching linecards.
Intel AP-142 (18pp)

9 **"Designing with TCM1500A Bell Tone Ringer/Detector Family"**
(TCM1501A, TCM1505A, TCM1506A, TCM1512A, TCM1520A)
Discusses the use of BIDFET ICs to cost effectively replace up to ten discrete components. Applications include telephones, auto-answer modems, and small-current power supplies.
Texas Instruments AR-SCTA001 (28pp)

10 **"Digital Line Interface Application Guide"**
(MT8970, MH89700)
Presents diagrams of sample digital line interfaces, including an ST-Bus port to a PABX backplane, a microprocessor port to a PC, and a digital channel bank.
Mitel MSAN-113 (11pp)

Communications (cont)

11 **"Digital Line Interface Module Application Guide"**
(MH89700)
Gives simplified block diagrams of DLIM links and interfaces to a digital trunk, PABX backplane, and controlling microprocessors communicating with mainframes, local area networks, desktop computers, and CAD/CAM equipment.
Mitel MSAN-110 (11pp)

12 **"Digital Line Interface Module User's Guide"**
(MH89700)
Gives operating characteristics and application details on a general-purpose interface module for use in digital telephony.
Mitel MSAN-111 (31pp)

13 **"Digital Telephony and the Integrated Circuit CODEC"**
(TP3000, TP3001)
Discusses in detail PCM CODECs. Covers theory, μ-law and A-law characteristics, and device specifications. Also provides test controller examples, transmission applications, and switching applications.
National AN-215 (16pp)

14 **"Dual Tone Decoding"**
(XR567, XR2567)
Discusses and presents diagrams for a fast, narrow band tone decoder, a touch-tone decoder, and a low cost frequency indicator.
Exar AN-08 (2pp)

15 **"EX-C277 Low-Voltage PCM Repeater IC"**
(XR-C277)
Explains PCM repeater fundamentals, device operation, and presents schematic for a repeater application.
Exar An-04 (6pp)

16 **"Electronic Tone Ringer to Replace the Telephone Bell"**
(ML8204, ML8205)
Investigates the considerations involved in defining an electronic tone ringer to replace the mechanical telephone bell. Illustrates a tone ringer using the ML8204, including construction and electrical and acoustical characteristics.
Mitel Semiconductor MSAN-103 (7pp)

17 **"Full-Duplex 1200 BPS/300 BPS Modem System"**
(XR2120, XR2123, XR14412)
Describes a full-duplex modem system operating at 1200 baud synchronous with phase-shift-keying encoding or 300 baud asynchronous with frequency-shift keying.
Exar AN-25 (3pp)

18 **"Gain Measurements in a CODEC System"**
(TP3000)
Explains aspects of telecommunication measurement techniques and units as they apply to the single channel CODEC.
National AN-219 (4pp)

19 **"Glossary of Digital Telecommunications Terms"**
Presents definitions of terms commonly encountered in telecommunications in relation to digital switching and transmission of speech signals.
Mitel Semiconductor MSAN-102 (7pp)

20 **"HC-55516/32 CVSD Concept and Operations"**
(HC55516, HC55532)
Outlines Continuously Variable Slope Delta Modulation and compares it to pulse code modulation.
Harris Semiconductor (5pp)

LINEAR

Communications (cont)

1 **"HD-15530/31 Product is MIL-STD-1553A"**
(HD15530, HD15531)
Describes the HD-15530 and its application to the MIL-STD-1553 protocol for a twisted-pair, party-line bus.
Harris TB-15 (2pp)

2 **"High Performance PCM Repeater Using XR-C262"**
(XR-C262)
The design principle and the electrical characteristics of the XR-C262 high performance PCM repeater IC are described. Circuit connection and application examples are given in its use in 1.5 Megabit or 2 Megabit PCM systems.
Exar AN-10 (8pp)

3 **"High-Frequency FSK Modem Design"**
(XR-2206, XR210)
Describes the design and construction of a 100-kilobaud full-duplex FSK modem.
Exar AN-26 (6pp)

4 **"Hybrid Fiber Optic Transmitter Serves Analog Instrumentation Requirements"**
(FOT114)
Describes several applications of this fiber optic transmitter in gathering analog data in industrial environments.
Burr-Brown AN-116 (8pp)

5 **"Logarithmic Units of Measure in Telecommunications"**
An introduction to the logarithmic units used in the telecommunications industry.
RCA ICAN-7037 (4pp)

6 **"MK5380 Typical Telephone Application"**
(MK5380)
Presents a scheme for using the MK5380 tone dialer in a telephone dialing system.
Mostek Applications Brief (4pp)

7 **"MT8970/MH89700 User's Guide"**
(MT8970, MH89700)
Describes general-purpose interface parts for use in digital telephony.
Mitel MSAN114 (31pp)

8 **"MT8972 Application Circuits"**
(MT8972)
Discusses line connection, generation of bus timing signals, microprocessor interfacing, and integrated voice and data.
Mitel Issue 1 (7pp)

9 **"Manchester Encoding and Decoding for Local Area Networks"**
(8002)
Describes discrete implementation of encoder/decoder circuitry.
SEEQ (16pp)

10 **"Microcontroller Implementation of an Intelligent, Full Duplex, 300 Baud Modem"**
(COP2440)
Describes a cost-effective microcontroller implementation of a full duplex, 300-baud frequency shift keyed modem. The approach shifts the focus from traditional hardware-dominated solutions to a software adaptation of the modem.
National Semiconductor AN-324 (6pp)

11 **"Modem Modules: The Complete Data Communications Solution"**
(CH1765)
Describes hybrid modem modules that eliminate the additional design work required when using single-chip modems.
Cermetek AN-72 (5pp)

"Modems"
See listings under (Interface) Data Transmission

Communications (cont)

12 **"Monolithic Dual-Tone Multi-Frequency Receiver"**
(SSI201)
Describes device and its operation, gives performance data and three application circuits: a 16-channel remote control, a 2-of-8 decoder, and a DTMF to rotary dial pulse converter.
Silicon Systems (8pp)

13 **"Monolithic Modem Chip Eases Phone Access"**
(MM74HC943)
Describes a single-chip CMOS modem device which, together with a few peripheral ICs, allows you to configure a simple, inexpensive microprocessor-telephone interface system with autodial and autoanswer capabilities.
National Semiconductor AN-394 (12pp)

14 **"One-Chip Telephone"**
(PBL 3780)
Describes the operating characteristics of a complete electronic telephone chip with DTMF signaling. Topics covered include line impedance, microphone selection, gain regulation, and DTMF interfacing.
RIFA PBL 3780 (12pp)

15 **"Optimum Hybrid Design"**
Presents a method by which the dynamic range of a modem can be increased.
National Semiconductor AN-397 (15pp)

16 **"PCM Line Interface"**
(XR-T5680)
Gives details on a monolithic PCM transceiver used in short-line PCM transmission applications.
Exar AN-31 (5pp)

17 **"PCM Repeater Application Notes"**
(TCM 2101, TCM 2102)
Covers the key features, operations, and applications of PCM repeater/regenerators. Topics covered include data recognition and slicing, output data latches, line drivers, and timing waveforms.
Texas Instruments (34pp)

18 **"Picture Plotter Data Transmission System"**
(R24DC/V96P/1, AIM 65/40)
Note describes a picture plotter data transmission system handling both video and text data via the domestic telephone switched network.
Rockwell AN-637 (22pp)

19 **"Pulse Dialer Comparison"**
(MK5098, MK5099, MK50981, MK50982, MK50992)
Compares the major differences between Mostek pulse dialers.
Mostek Applications Brief (6pp)

20 **"Quality of Received Data for R24 Modem"**
(R24)
Gives characteristics and meanings of the digital signals involved for quadrature eye pattern and phase error generation for a 1200/2400-baud modem module. Typical external decode circuitry is illustrated.
Rockwell AN-608 (10pp)

LINEAR

Communications (cont)

1 **"R24 Modem Options"**
(R24)
Discusses the user-selectable options of a modem module, and presents guidelines for configuring a 2400-baud modem.
Rockwell AN-607 (14pp)

2 **"R24DC Interface to U.S. Switched Telephone Network"**
(R24DC)
Explains the FCC regulations relevant to connecting a modem directly to the domestic telephone network.
Rockwell AN-622 (7pp)

3 **"R24DC Modem Options"**
(R24DC)
Outlines a modem's interface options, detailing the implementation of such functions as auto-answering and origination.
Rockwell AN-624 (5pp)

4 **"R24DC Modem/EIA RS-232-C Interface"**
(R24DC)
Explains how to interface a modem with TTL/CMOS electrical characteristics to an RS-232-C connector.
Rockwell AN-619 (2pp)

5 **"R24LL Modem Options"**
(R24LL)
Explains the various user-selectable options of a modem module and presents some general guidelines for configuring a 2400-baud modem.
Rockwell AN-635 (11pp)

6 **"R24LL Modem/EIA RS-232-C Interface"**
(R24LL)
Describes the RS-232-C serial interface and its use with a CMOS/TTL-compatible modem module.
Rockwell AN-623 (2pp)

7 **"S2559 Digital Tone Generator"**
(S2559)
Describes a tone generator designed specifically to implement a dual tone telephone dialing system.
American Microsystems ANT01 (12pp)

8 **"SL560 Low Noise Amplifier Owner's Manual"**
(SL560)
Describes operation of a high-power 50-ohm amplifier, includes design examples of a 2-channel, variable-gain preamplifier.
Plessey Semiconductor (9pp)

9 **"SL600 Series—Integrated Circuits for Radio Communications"**
(SL600 Series)
Describes circuits and applications for the following: RF/IF amplifiers; limiting RF amplifier/detector; AGC generators; AF amplifier, VOGAD side tone amplifier, AM detector, AGC amplifier and SSB demodulator; multimode detector; microphone/headphone amplifier; double balanced modulators; and a square log device. Describes synchrodyne, superhet, SSB and multimode receivers; SSB and AM transmitters; SSB transceiver, a multi/mode transceiver and a Morse keyer.
Plessey Semiconductor Applications Manual (92pp)

10 **"Speakerphone Design Using XR-T6420-1 and XR-T6421"**
(XR-T6420-1, XR-T6421)
Illustrates a speakerphone circuit consisting of two audio channels, a control circuit, and a hybrid interface circuit.
Exar AN-30 (4pp)

Communications (cont)

11 **"Subscriber Line Control Circuits"**
(TCM3101)
Describes a subscriber line control IC that combines digital and analog functions in a single CMOS chip.
Texas Instruments (10pp)

12 **"T-1 Primer"**
(R8040, R8050, R8060)
Details the carrier and pulse code modulation techniques of an NMOS LSI tri-port memory, serial transmitter, and serial receiver.
Rockwell AN-310 (55pp)

13 **"TD1 (10371) Standalone"**
(10371, 10706)
This note describes the connections required to use a telecommunications data interface for standalone serial operation with a clock generator supplying A and B clocks.
Rockwell AN-618 (2pp)

14 **"Telephone Dialing Techniques Using the MC6805"**
(MC6805)
Illustrates two cost-effective methods of utilizing the M6805 family of microcomputers for telephone dialing. Hardware and software are given for both Dual Tone Multi-Frequency (DTMF) and rotary pulse-type dialing systems.
Motorola Semiconductor AN-940 (18pp)

15 **"The CMOS Bit Rate Generator"**
(HD4702)
A tutorial on a programmable CMOS bit-rate generator and its applications.
Harris TB-40 (4pp)

16 **"The HC-550X Telephone Subscriber Line Interface Circuits"**
(HC-550X)
An introduction to the HC-550X family of SLICs, which integrate most of the BORSCHT functions of the traditional hybrid and transformer interface circuits onto a single chip.
Harris AN-549 (19pp)

17 **"The Subscriber Line Card in a Distributed Control Switching System"**
(TP3110, TP3120)
Describes a digital line interface controller (DLIC) and associated set of integrated circuits that form a major portion of a complete subscriber line card subsystem. The DLIC is a multi-purpose system interface and control circuit for a line card of between four and thirty-two subscribers. The same circuit if also useful as the interface device for trunk, special service, maintenance and administration circuit cards.
National Semiconductor AN-316 (6pp)

18 **"The TCM1705A and TCM1706 Speech Transmission Circuit for the Telephone Instrument"**
(TCM1705A, TCM1706)
Describes the functional characteristics of a pair of speech transmission ICs for designing electronic telephones. Discusses dc characteristics, gain regulation, amplifier configurations, dynamic range, and bridge ratio.
Texas Instruments (13pp)

19 **"Understanding Telephone Key Systems"**
Explains telephone key systems, presenting a theoretical architecture based loosely on many of the 16-station key systems now in existence.
Motorola Semiconductor AN893 (7pp)

LINEAR

Communications (cont)

1 **"Using Integrated Detector/Preamplifiers in Fiber Optic Systems"**
(MC75452, MFOE102F)
Discusses the advantages of using an integrated detector/preamplifier for fiber optics communication links by (1) simplifying circuit design and layout and (2) allowing the entire "front-end" of the receiver to be enclosed in a shielded connector.
Motorola AN-814 (4pp)

2 **"Using the S3525A/B DTMF Bandsplit Filter"**
(S3525A/B)
Presents applications of this bandsplit filter in DTMF receiver circuits.
American Microsystems (26pp)

3 **"V27P/1 and V96P/1 4800/9600 BPS Modem Interfacing"**
(V27P/1, V96P/1)
Provides some basic techniques for control and interface of 4800 and 9600-baud modems. Typical user-controlled interfaces are included for TTL, CMOS, switch-selectable, and user strap-selectable options.
Rockwell AN-617 (4pp)

4 **"XR-212ACS Performance Testing"**
(XR-212ACS)
Explains test procedures for a 300/1200 bps full-duplex modem system.
Exar AN-29 (2pp)

5 **"XR-212AS Modem System"**
(XR-212AS)
A description of a four-chip Bell 212A modem set, functions, relationships, and testing procedures.
Exar AN-28 (2pp)

6 **"XR-C240 Monolithic PCM Repeater"**
(XR-C240)
Provides device description, description of circuit operation, and schematics for a typical repeater system.
Exar AN-02 (6pp)

Comparators

"A Simple Comparator Using the HA2620"
See listing under (Linear) Amplifiers, Operational (Harris)

7 **"AM685/AM686/AM687: Designing with High-Speed Comparators"**
(AM685, AM686, AM687)
Gives information on comparators, relaxation oscillators, operating frequency, offset errors, and input hysteresis.
Advanced Micro Devices Analog and Communications Products Data Book (10pp)

8 **"Application of Programmable Micropower Comparators"**
(L161)
Describes the device and how to program it. Also describes the effects of programming on AC characteristics, limit, zero crossing, and level detectors; DC to DC converter applications.
Siliconix AN76-7

9 **"High-Speed Comparator Applications"**
(SP9750, SP9685, SP9687)
Describes a family of high-speed comparators and circuits for A/D converters. Reviews all parallel, parallel/series and successive approximation conversion techniques.
Plessey (50pp)

Comparators (cont)

10 **"RC4805 High Speed Precision Latching Comparator"**
(RC4805)
Describes the principles of operation and details several applications of a high-speed latching comparator.
Raytheon Semiconductor AN27 (16pp)

"Radiation Testing of Linear Microcircuits"
Includes the 702. See listing under (Linear) General. (Fairchild).

11 **"The 725 Op Amp as a Low Level Comparator"**
(PM725)
Provides the circuit and design curves for a submillivolt level comparator based on the 725 op amp.
Precision Monolithics AN-25 (4pp)

12 **"Varying Comparator Hysteresis without Shifting Initial Trip Point"**
Describes adding a positive feedback circuit to introduce precise variable hysteresis into the usual comparator switching action.
Burr-Brown AN-62 (1pp)

Consumer, AM/FM

13 **"AM and FM Integrated Circuits for Electronically Tuned Radios"**
(LM1865, LM1863)
The increasing popularity of digital tuning systems and the anticipated introduction of AM stereo broadcasts has motivated the development of new signal-processing ICs. This note discusses applications of these devices to achieve more features and better performance, particularly in automobile radios.
National Semiconductor AN-382 (14pp)

14 **"AM-FM Radio Designs Using the ULN-2242A, ULN-2241A and ULN-2240A Integrated Circuits"**
(ULN-2242A, ULN-2241A, ULN-2240A)
Describes ICs containing all the active circuits needed for the AM tuner, FM IF amplifier and detector of a radio receiver. Details options for implementing these functions.
Sprague AN27121.63 (14pp)

15 **"AM/SSB Transceivers and Noise Blanking Using SL1600 Series Circuits"**
(SL1623, SL1626, SL1640, SL1641)
Describes the sub-systems used in AM-SSB transceivers.
Plessey Semiconductor (10pp)

16 **"An AM Radio IC for Electronically Tuned Radios"**
(LM1863)
Provides complete circuit board layout and typical performance curves for an AM radio using the LM1863 signal processing circuit. The circuit is especially suited for radios with varactor tuning and frequency synthesis.
National Semiconductor AN-381 (14pp)

17 **"An AM Receiver Using the Plessey SL1600 Series"**
(SL1600 Series)
Describes the design of a simple AM receiver.
Plessey Semiconductor (7pp)

18 **"An Am Radio IC For Electronically Tuned Radios"**
(LM1863)
Provides complete circuit board layout and typical performance curves for an AM radio using the LM1863 signal processing circuit. The circuit is especially suited for radios with varactor tuning and frequency synthesis.
National Semiconductor AN-381 (14pp)

LINEAR

Consumer, AM/FM (cont)

1 **"An SSB Transceiver for Citizens' Band Using Plessey SL1600 Integrated Circuits"**
(SL1600 Series)
Describes the design of an SSB transceiver.
Plessey Semiconductor (4pp)

2 **"Application of the CA3089E FM-IF Subsystem"**
(CA3089)
Discusses stability considerations and following circuits: quadrature-detector, audio and AFC, mute, tuning meter and rf-AGC, if amplifier/detector system and stereo decoder. Also covers operation at frequencies other than 10.7 MHz.
RCA ICAN-6257 (8pp)

3 **"Applications of the One-Chip-Radio Integrated Circuit Family"**
(TDA1083, U410B, U411B, U416B, U417B, U418B)
Gives sample applications of the U410B 1W audio amplifier, U411B 1W audio amplifier with variable gain, U417B and U418B single-chip radio ICs, U416B RF section of the U418B with an additional audio preamplifier, and TDA 1083 standard single-chip radio IC.
AEG-Telefunken SI 2.81 (8pp)

4 **"Binary Synthesizers Users Guide"**
Full details on components of a two-device binary synthesizer. Includes programming information.
Plessey Semiconductor (13pp)

5 **"Designing FM Tuners with TDA1062 and TDA1093 Integrated Circuits"**
(TDA1062, TDA1093)
Includes functional diagrams, schematics, and typical performance charts along with discussion of FM tuner design.
AEG-Telefunken (46pp)

6 **"Development of High-Quality Receivers for A-M Stereo"**
(ULN2241A, ULN2249A)
Outlines circuit techniques for achieving high-quality AM stereo receivers using existing ICs. Includes two circuit designs for driving A-M stereo decoders.
Sprague Electric Data Book WR-503 (4pp)

7 **"Development of High-Quality Receivers for AM Stereo"**
(ULN-2241A, ULN-2249A)
Gives design parameters for rf and if sections of am stereo receivers with examples utilizing standard integrated circuits.
Sprague TP80-5 (5pp)

8 **"Frequency Selective AM Detection Using Monolithic Phase-Locked Loops"**
(XR2228, XR215, XR2212)
Design of frequency selective coherent AM and AM/FM demodulator systems using these devices is described.
Exar AN-13 (4pp)

9 **"IF Amplifier/Detectors for FM Receivers"**
(SL6600, SL6640, SL6650, SL6690)
Describes monolithic ICs containing an IF strip, an FM demodulator and a squelch system for use in FM receivers for mobile, portable,base-station and paging systems. Provides circuit diagrams of typical applications and includes printed circuit layouts and component location.
Plessey (32pp)

10 **"Integrated Circuits for FM Broadcast Receivers"**
(CA3005, CA3011, CA3012, CA3013, CA3014)
Discusses circuits for FM tuner, IF amplifier, limiter, and detector applications.
RCA ICAN-5269 (7pp)

Consumer, AM/FM (cont)

11 **"Integrated-Circuit Stereo Decoder Using the CA3090AQ Stereo Multiplex Demodulator"**
(CA3090AQ)
Gives circuit description. Describes the LC oscillator, reactance, stereo defeat, dc coupled flip-flop preamplifier and phase splitter circuits.
RCA ICAN-6259 (10pp)

12 **"Manual and Automatic FM Tuning System Using Economega I"**
(Economega, AY3-8203, ER1400, MEM4956)
Describes a system that allows manual tuning of a Goodman 1-20 tuner with non-volatile electronic storage of tuning data for 16 stations. Diagrams, schematic.
General Instrument Bulletin 0414 (4pp)

13 **"Radio Receiver Frequency Counter/Clock"**
Supplies diagram and operating instructions for using each device to display time or frequency on a 3½ digit display.
General Instrument Bulletin 0411 (3pp)

14 **"SL1600 Series Transceiver Applications"**
(SL1600 Series)
Discusses simple SSB and multimode transceiver design.
Plessey Semiconductor (32pp)

"Scanning Logic for RF Scanner-Receivers Using CMOS Integrated Circuits"
See listing under (Digital) CMOS (Motorola)

15 **"TDA1083—Integrated Circuit for AM/FM Receivers"**
(TDA1083)
Shows external connections for using integrated receiver circuit in low and medium power AM/FM radios, VHF and microwave receivers, and in TV sound channels.
AEG-Telefunken Halbleiter Informationsdienst 2.78 (11pp)

16 **"TDA1200 FM-IF System for High Performance Radio Receivers"**
(TDA1200)
Gives a detailed description of the device. Describes relative performance of device when used in an FM tuner, an AM/FM car radio, and a portable AM/FM radio.
SGS-ATES Technical Note 117 (12pp)

17 **"The Design of Programmable Dividers for UHF and VHF Synthesizers"**
(SP8000 Series)
Details considerations for designing a programmable frequency synthesizer using high-speed frequency dividers and standard TTL devices. Example problems demonstrate device selection procedures.
Plessey AN2 (24pp)

18 **"ULN-2204A AM/FM Receiver System"**
(ULN-2204)
Presents operation of device and discusses typical applications.
Sprague AN-27121.51 (12pp)

19 **"VHF Synthesizer"**
(SP1648, SL1521, SP8690, SP8790, SP8760)
Describes a phase-lock loop synthesizer used in marine UHF radio telephone, weather broadcasts, air-traffic control and the amateur 2-meter band. Provides electrical diagrams and circuit board layout.
Plessey (3pp)

APPLICATION NOTE DIRECTORY

LINEAR

Consumer, Audio

1 **"A Non-Complementary Audio Noise Reduction System"**
(LM1894)
Deals with the design and operating characteristics of the LM1894, a single-ended noise reduction system for sources that are not encoded.
National Semiconductor AN-386 (10pp)

"An AGC Building Block"
See (Linear) Consumer, TV (Interdesign)

2 **"An Electronic Music Synthesizer Using the XR2207 and the XR2240"**
(XR2207, XR2240)
The design of a simple, low-cost music synthesizer system is described.
Exar AN-15 (2pp)

3 **"Application of Audio Amplifier - Transistor Array ICs"**
(LM389)
Discusses the use of audio amplifier ICs with on-chip transistor arrays in a variety of audio circuits including a dc-dc converter, bistable touch switch, frequency standard, oscillator and logarithmic amplifier.
National Semiconductor AN-264 (5pp)

4 **"Applications for Audio and Electronic Music"**
(SSM2030, SSM2040, SSM2050)
Analysis of the 2030 voltage controlled oscillator, the 2040 voltage controlled filter and the 2050 transient generator in electronic music systems. Discusses error sources and techniques for improving accuracy and temperature stability. Circuit diagrams are included.
Solid State Micro Technology for Music (8pp)

5 **"Audio Amplifiers"**
Discusses basic design considerations, performance capabilities, and circuit configurations for audio amplifiers intended for a wide range of power-output levels. Covers preamplifiers, intermediate stages, overload protection circuits, as well as audio output circuits. Features circuit diagrams and per-data for a wide variety of practical circuits, including discrete-component types, integrated-circuit types, or a combination of discrete components and integrated circuits.
RCA APA-551 (104pp) $5.00

6 **"Audio Noise Reduction and Masking"**
(LM1894)
Describes the DNR non-complementary noise reduction system in terms of functional blocks and the psychoacoustic background necessary to understand the operating principles.
National Semiconductor AN-384 (6pp)

7 **"Build a Simple Comb-Filter or Flanger with a Bucket Brigade Delay Line"**
(SAD1024A)
Describes a flanger (electronic sound modifier) and what is needed to build one.
Reticon AN-113 (4pp)

8 **"Cassette Tape Players using TDA7270"**
(TDA7270)
Describes circuit operation and gives application guidelines for an IC that provides control functions for a cassette/radio unit.
SGS-ATES DN347 (8pp)

Consumer, Audio (cont)

9 **"DC Coupled Tape Head Pre-amplifiers"**
(LM1897, LM1837)
Describes the use of two dc coupled tape head preamplifiers in a low-noise, high-gain and low-distortion audio cassette playback circuit.
National Semiconductor AN-407 (8pp)

10 **"DNR Applications of the LM1894"**
(LM1894, LM832)
Describes applications of this Dynamic Noise Reduction chip in audio and video tape recorders, radio and TV receivers, and automobile radio-cassette receivers.
National Semiconductor AN-390 (9pp)

11 **"M252 and M253 Rhythm Generators for Electronic Organs"**
(M252, M253)
Defines and describes rhythm generators. Presents these two devices, and describes their use in electronic organs.
SGS-ATES Technical Note 131 (21pp)

"TCA600/900 and TCA610/910 Integrated Motor Speed Regulators"
See listing under (Linear) Industrial Control (SGS-ATES)

12 **"TDA105M—Cassette Recorder Preamplifier with ALC"**
(TDA1054M)
Discusses features of the device and preamplifier noise. Applications in Hi-Fi, stereo, and dynamic range compressors are described.
SGS-ATES Technical Note 124 (24pp)

13 **"The Use of Floating Point Arithmetic in Digital Filters and Equalizers"**
Describes floating point processors and how they are used in digital audio systems to provide noise control, accurate response control, and maintenance of effective signal-to-noise ratio.
TRW LSI Products TP-29

14 **"Use of Analog Delay Lines for Audio Speed Change without Pitch Changes"**
(SAD1024A)
Describes technique for increasing or slowing the speed of a recording.
Reticon AN-112 (4pp)

15 **"Writing Music for the AY3-1350 Tunes Synthesizer"**
(AY3-1350)
Provides coding scheme for writing music to be incorporated in a PROM and played back by a music synthesizer chip.
General Instrument Bulletin 0502 (4pp)

Consumer, TV

16 **"A High Stability Syn-AGC and Horizontal-Vertical Countdown System for 525-Line Color Television Receiver Applications Using the RCA CA3154G and CA3157G Integrated Circuits"**
(CA3154, CA3157)
Provides detailed description of each circuit and how they are used in 525-line color TV applications. Contains schematics and waveforms for selected terminals.
RCA ICAN-6802 (20pp)

LINEAR

Consumer, TV (cont)

1 **"A New Low-Level Luminance Processing System"**
(CA3143, CA3144)
In addition to performing the traditional functions of peaking, gain control, subcarrier removal, and black-level clamping for color television receivers, the Colortrak luminance processing system handles nonlinear transient compression and ambient light tracking.
RCA ICAN-7173 (6pp)

2 **"A Single IC for the Complete PIX-IF-System in TV Receivers"**
(CA3068)
Gives a detailed description of the circuit functions of the CA3068 and its use in color and b/w TV receivers.
RCA ICAN-6303 (17pp)

3 **"An AGC Building Block"**
(MONOCHIP)
Describes four AGC circuits using a semi-custom chip. Includes graphs of characteristics and schematics.
Interdesign APN-17 (6pp)

4 **"Application of the CA3126Q Chroma-Processing IC Using Sample-and-Hold Circuit Techniques"**
(CA3126Q)
Detailed circuit description of the device, which requires only one adjustment; a trimmer capacitor to tune the crystal filter. Discusses performance data, the phase detector, sample and hold circuits, the VCO loop, first chroma amplifier and ACC servo loop, and the second chroma amplifier.
RCA ICAN-6247 (8pp)

5 **"Application of the CA3143 and CA3144 TV Luminance Processors"**
(CA3143, CA3144)
Describes application information for both the CA3143 and CA3144 luminance processors.
RCA ICAN-6718 (4pp)

6 **"Application of the MC1374 TV Modulator"**
(MC1374)
The MC1374 was designed for use in applications where separate audio and composite video signals are available, and which need converting to a high-quality VHF television signal. Examples include an output device for subscription TV decoders, video disk and video tape players.
Motorola Semiconductor AN-829 (12pp)

7 **"Applications of the CA3134G Sound IF and Output Subsystem in Television Receivers"**
(CA3134)
Describes device and its application in TV sound systems.
RCA ICAN-6728

8 **"CA3210 Horizontal, Vertical and Regulator Control IC"**
(CA3210)
This note describes the use of the CA3210 deflection IC in generating horizontal and vertical drive signals, generating a control signal for a receiver's voltage regulator, regulating an IC supply, controlling IC and receiver start-up, correcting for VCR skew error, and preamplifying a vertical scan signal.
RCA ICAN-7164 (5pp)

9 **"DIDON Demodulator General Operating Principles"**
(TEA2585, TEA2586)
Explains the use of a two-chip DIDON demodulator for the transmission of filtered digital data over television broadcast channels. Topics include the extraction of digital data, data clock regeneration, and validation signal generation.
Thomson CSF Components NA-021A (22pp)

Consumer, TV (cont)

10 **"Description and Application of the RCA CA3120E and CA3142E Integrated-Circuit TV-Signal Processors"**
(CA3120E, CA3142E)
Gives circuit description and application instructions for two ICs that process video signals in monochrome or color TV receivers and supply noninverted and video outputs, dual-polarity composite synchronization signals and AGC signals.
RCA ICAN-6302 (9pp)

11 **"Description and Use of the Vertical Deflection IC TEA 2015A"**
(TEA 2015A)
Explains the operation of the TEA 2015A vertical deflection IC and describes its application in small-screen black and white sets.
Thomson CSF Components NA-013A (15pp)

12 **"EF9365, EF9367 External Synchronization"**
(EF9365, EF9367)
Describes a complete 625-line synchronization system for the EF9365/7 processors. Covers incrustation on a standard TV equipped with a SCART connector.
Thomson CSF Components NA-016R1A (9pp)

13 **"Integrated NTSC Chrominance/Luminance Processor"**
(CA3217)
Beginning with a brief historical review of the improvements in color television receivers, this note then gives a detailed description of the operation of the CA3217 chrominance/luminance processor IC.
RCA ICAN-7175 (11pp)

14 **"Monomax—Application of the MC13001 Monochrome Television Integrated Circuit"**
(MC13001)
Describes the design and construction of a complete 12-inch black and white line-operated television receiver. Includes schematics and artwork for the p-c board layout.
Motorola AN-879 (12pp)

15 **"Programmable TV Timer/Time-Channel Display"**
(MM53107, MM53100, MM5840)
Describes an on-screen TV real time and channel display based on the devices. Includes schematics and PC board layout.
National Semiconductor AN-196 (10pp)

16 **"TEA 2020, A Vertical Deflection IC for 110° Large-Screen Colour TV Sets"**
(TEA2020)
Gives specs, block and schematic diagrams, and typical applications of the TEA 2020 vertical deflection IC.
Thomson CSF Components NA-012A (36pp)

17 **"TEA2017 Horizontal and Vertical Scanning Integrated Circuit for Black-White TV and Display Applications"**
(TEA2017)
Describes the operations of the TEA2017 IC, which provides synchronization and horizontal and vertical scanning with minimum external component requirements.
Thomson CSF Components NA-037A (17pp)

18 **"TV Tuner/Channel Display"**
(AY8130)
Describes a phase-locked loop TV tuning controller IC that interfaces through a prescaler divider to a TV's varactor section. A keyboard interface is provided for channel selection and volume control, along with nonvolatile memory to store channels and volume levels.
General Instrument AB-201 (2pp)

LINEAR

Consumer, TV (cont)

1 **"Television Video IF Amplifier Using Integrated Circuits"**
(MC1350, MC1352, MC1353, MC1330)
Considers the requirements of the video IF amplifier section of a television receiver, and gives working circuit schematics using integrated circuits that have been specifically designed for consumer-oriented products.
Motorola Semiconductor AN-545A (12pp)

3 **"The LM 1823: A High Quality TV Video I.F. Amplifier and Synchronous Detector for Cable Receivers"**
(LM1823)
Describes a video I.F. amplifier/detector combination that can provide high-quality baseband video signals inside the decoder box. Includes schematic of external components and pc-board layout.
National Semiconductor AN-391 (16pp)

4 **"Video Game FM Sound Generator"**
Describes a system that enables a TV sound system to be used for game sounds as well.
General Instrument Bulletin 0405 (2pp)

Current Sources

5 **"Monolithic Current Mirrors"**
(TL011, TL012, TL014, TL021)
Describes the advantages inherent in a monolithic approach to matching transistors in implementing the Wilson current mirror circuit. Applications include a voltage-to-current converter, current buffer, constant-current sink, and lower-power light detector.
Texas Instruments CL-576 (10pp)

Displays

6 **"25 by 80 Character Display Unit Using the EF9340 and EF9341"**
(EF9340, EF9341)
Gives a design example of a 25 line by 80 character display unit using the EF9340/1 ICs and two standard 1K by 8 static RAMs.
Thomson CSF Components NA-022A (21pp)

7 **"Basic Routines for EF9365 and EF9366 Graphic Display Processors"**
(EF9365, EF9366)
Presents a selection of Assembly Language programs for the EF9365/6 processors, including programs for generating extended character sets, circles, rings, disks, and convex quadrilaterals.
Thomson CSF Components NA-028A (39pp)

8 **"EF9367 Graphic Display Processor Application Principles"**
(EF9367)
Discusses design considerations and principal applications of the EF9367 display processor in 512x640, 512x768, and 512x1024 resolution devices.
Thomson CSF Components NA-036A (28pp)

Displays (cont)

9 **"Semi-Graphic Display Unit Using EF9340 and EF9341"**
(EF9340, EF9341)

10 **"Use of the Extended Character Generator with the EF9340 and EF9341 Display Circuits"**
(EF9340, EF9341)
Explains how to extend the character set provided by the EF9340/1 ICs beyond 128 alphanumeric and 128 semi-graphic characters. A sample hardware implementation and programming are included.
Thomson CSF Components NA-029A (19pp)

11 **"Using the EF9364 Clock Inhibition Signal"**
(EF9364)
Describes the use of the clock inhibition signal on the EF9364 display circuit to inhibit dot clock for retrace blanking.
Thomson CSF Components NA-002A (7pp)

Describes the criteria and experimental procedures used in the choosing of moulding resin for plastic packaged devices.
SGS-ATES Technical Note 132 (15pp)

"Custom IC Design Using I²L Technology"
See (Digital) I²L (Exar)

6 **"Design Aid to Build a Smoke Detector with the SM110 IC"**
(SM110)
The SM110 functions applicable to building a smoke detector are discussed: a MOSFET input smoke sensing comparator, low-battery reference voltage, low-battery detector, internal timing, and output driver. A smoke detector schematic is given, along with application and construction aids.
Siliconix DA78-4 (6pp)

7 **"Electronic Combination Lock"**
(PLS157)
Describes the construction of an electronic combination lock with user-settable security code implemented using the PLS157.
Signetics AN-17 (3pp)

8 **"Failure Avoidance"**
Discusses circuit techniques to reduce power component failure during the design-board phase of development. Some of the techniques also apply on a production basis.
Apex Microtechnology Corp. AN-4 (2pp)

9 **"Function Circuits, Design and Applications"**
Covers design theory and applications for such analog functions as multipliers, dividers, logarithmic amplifiers, exponentiators, RMS converters, and active filters. Includes notes on specifying and testing these functions.
Burr-Brown $29.50 (300pp)

General (cont)

10 **"IC Crystal Oscillators"**
(MONOCHIP)
Covers crystal oscillator basics and interfacing them with device.
Interdesign APN-4 (3pp)

11 **"Integrated High Speed Operational Amplifier"**
(MONOCHIP)
Explains how modern high speed, high stability circuits can be constructed using semicustom IC technology. A representative op amp with a bandwidth of 40 MHz and an open loop gain of 10,000 is presented.
Interdesign APN-7 (7pp)

12 **"Interface Databook"**
Primarily data sheets, but includes the following application notes individually described elsewhere: AN-22, 84, 108, 198, 199.
National $6

13 **"Linear Applications Handbook"**
Published 1980, includes National application notes (AN) 2-4, 13, 20, 21, 23, 24, 29-32, 41, 42, 46, 48, 56, 64, 69-72, 74, 75, 79, 81, 82, 87, 88, 97, 103, 104, 110, 115, 116, 125, 127, 129, 132, 146, 147, 151, 153, 154, 156, 159, 161, 173, 178, 179, 181, 182, 184, 192, 193, 210, 211, 222, 225, 233, 234, 238, 240, 241, 242 and Linear Briefs (LB) 1-29, 32-39, 40-50 individually described elsewhere.
National $16 (623pp)

14 **"Nonlinear Circuits Handbook"**
Covers principles, circuits, performance, specifications, testing and applications for multipliers, dividers, squares, log circuits, multi-function and rms-to-dc converters.
Analog Devices $5.95 (535pp)

15 **"Optoelectronics Handbook"**
Covers discrete LED lamps, LED numeric displays, multidigit numeric displays, bar graphs, and interface devices. Both product descriptions and applications included.
National $6 (160pp)

16 **"Polarity Programmable Peak Detector"**
Details a circuit that gives positive or negative peak detection and reset levels over a ± 10 V range.
Precision Monolithics AN-27 (2pp)

17 **"Rectifier Circuits for Linear IC's"**
(MONOCHIP)
Discusses techniques for designing rectifiers using the components available on semicustom IC's. Design precautions are examined in detail and illustrative diode, peak detector, and averaging rectifier circuits are presented.
Interdesign APN-6 (7pp)

18 **"Simplified Design of Astable RC Oscillators Using the CD4060B or Two CMOS Inverters"**
(CD4060B)
Stresses practical aspects of design and provides easy-to-use algebraic equations that permit values of R and C for a given oscillator frequency to be quickly determined.
RCA ICAN-6883 (2pp)

19 **"Single MOSFET Crystal Oscillator Design for Integrated Circuits"**
Presents a procedure for designing a single MOS transistor crystal oscillator requiring only one external pin for the crystal. The technique is incorporated into an HP-67 and HP-41C calculator program. Code listings and a bar code of the program are provided.
Interdesign APN-29 (17pp)

LINEAR

General (cont)

1 **"Solid-State Devices Manual"**
Provides tutorial information on discrete devices and ICs, with emphasis on consumer, hobbyist and experimenter applications.
RCA SC-16 $5.00 (750pp)

2 **"Summary of Electrical Characteristics of Some Well Known Digital Interface Standards"**
Summarizes the important electrical characteristics of the most commonly accepted interface standards (IEEE488, RS357, RS366, etc.) and offers recommendations on how to use the companies' products to meet those standards.
National AN-216 (15pp)

3 **"Thermal Resistance—A Reliability Consideration"**
Covers the relationship between junction temperature and reliability. Describes a thermal model for plastic dual-in-line packages.
Sprague TP80-2 (9pp)

Industrial Control

4 **"A Modern Infrared Remote Control System"**
(U143M, U327M, U328M, U3034M, U3036M, U3037M, U3038M, U3043M, U250B, U427B, U3870, U4013, U4051, U4052)
Outlines the requirements for a modern IR remote control system and explains how the TFK system solves associated problems. Sample applications include the use of a single transmitter to control eight different appliances.
AEG-Telefunken SI 4.81 (21pp)

5 **"A ROM-Digital Approach to PWM-Type Speed Control of AC Motors"**
Describes a pulse width modulation scheme to control motor speed. Shows a CMOS-ROM system to provide variable frequency drive for 1, 2, or 3 phase motors.
Motorola AN-733 (12pp)

6 **"A Variable Frequency Control for 3 ∅ Induction Motors"**
Describes a variable frequency, variable voltage drive system for 3-phase inducton motor controls.
Motorola AN-766 (10pp)

7 **"An Electronic Lamp Monitor"**
(ULN-2435A)
Discusses requirements of lamp monitoring systems and describes a new monolithic circuit to monitor all exterior lamps of an automobile.
Sprague TP81-7 (5pp)

8 **"Applications of the CNY70 and K170P Reflective Optocouplers"**
(CNY70, K170P)
The basic operation of reflective optocouplers is explained, and application considerations such as the influence of temperature, ambient light, and distance from the reflecting surface are discussed. Sample applications include the detection of position, motion, and direction.
AEG-Telefunken SI 7.81 (14pp)

Industrial Control (cont)

9 **"Electronic Controller with an Equilibrium Sustaining Mode"**
(3500 Series)
Discusses a controller formed with two operational amplifiers in a pulse width modulation circuit with feedback. The feedback operates from a heater through the medium being heated to sense amplifiers.
Burr-Brown AN-63 (2pp)

10 **"Infrared Remote Control with TI Products"**
(SN76832, SN76881, SN76882, SN76891)
Describes the design of transmitter and receiver systems capable of implementing highly reliable unobstructed remote control functions for ranges up to 50 feet.
Texas Instruments AR-SGDA001 (12pp)

11 **"Pulsed IR Light Barrier"**
(TDA4180P, U113B)
Describes electro-optical proximity-sensing system using a pulsed infrared light barrier. Provides circuit diagrams for receiver and transmitter, and includes curves for selecting external circuit RC values.
AEG-Telefunken Halbleiter Informationsdienst 1/77 (5pp)

12 **"Real Remote Control"**
(S2742, S2743)
Describes a remote control system using the S2742/2743 with IR transmission. Demonstrates a simple, effective alignment technique.
American Microsystems

13 **"Simplifying High-Efficiency Motor Drive Systems with a New Family of PWM Integrated Circuits"**
(SG1731, SG2731, SG3731)
Describes a pulse width modulator circuit specifically designed for dc motor control.
Silicon General (6pp)

14 **"TC900 and TC910 Integrated Motor Speed Regulators"**
(TCA900, TCA910)
Introduces speed regulator basic and describes device performance. Portable and car mounted applications are depicted.
SGS-ATES Technical Note 113 (10pp)

15 **"Temperature Measurement Method Based on Matched Transistor Pair Requires No Reference"**
(MAT-01, OP-10)
Discusses properties of matched transistor pairs, then describes temperature measuring systems built with a matched pair, constant current sources, and a differential amplifier (OP-10).
Precision Monolithics AN-12 (8pp)

16 **"Variable Speed Control System for Induction Motors"**
(MC673, MC688)
Describes control scheme implemented with discrete components and IC logic coupled by an LED and a photo transistor. Gives example of a circuit used to drive a Class F, 60 Hz, permanent-split, capacitor induction motor with a 13 oz. in. load rating.
Motorola AN-575A (5pp)

17 **"µA7392 Motor Speed Controller"**
(uA7392)
Describes device operating principles and performance. Includes schematics, design considerations, and applications in a tape recorder, an optical tach, and for bidirectional motor control.
Fairchild AN-343 (20pp)

LINEAR

Instrumentation

1 **"A Complete Function Generator System Using the XR2206"**
(XR2206)
A self contained function generator system is described, using the device. Complete circuit connection diagram, parts list and assembly instructions are given for a DC to 100 kHz self-contained function generator system with AM/FM capability and triangle, sine and square wave output.
Exar AN-14 (4pp)

2 **"A Digital Multimeter Using the ADD3501"**
(ADD3501)
Describes a 3½ digit multimeter capable of measuring ac and dc voltages, currents and resistance with the device. Includes circuit diagram.
National AN-202 (4pp)

3 **"A Universal Sinewave Converter Using the XR2208 and XR2211"**
(XR2208, XR2211)
A circuit technique is described which can convert any periodic waveform into a low-distortion sinewave. The circuit operation is completely independent of input waveform amplitude and frequency as long as the input signal is periodic and can operate over a frequency range of 1 Hz to 100 kHz.
Exar AN-11 (4pp)

4 **"Building a Battery Operated Auto Ranging DVM with the ICL7106"**
(ICL7106)
Describes a technique for autoranging a battery-operated DVM suitable for panel-meter applications. Includes circuit ideas for measuring conductance, resistance and current, and for 9V and 5V supply operations.
Intersil Application Bulletin A046 (4pp)

5 **"Design Aid of the LD110/LD111 3½-Digit DVM Demonstrator Board"**
(LD110, LD111)
Gives schematics, parts list, and art work for a 3½-digit DVM demonstrator board using the LD110/LD111.
Siliconix DA74-1 (4pp)

6 **"Dual Polarity 3½ Digit DVM Realized with Simple CMOS Interface"**
(ADC3711, LF11300)
Describes an auto-zero, auto-polarity 3½-digit DVM using the LF11300 and the MM74C928 (ADC3711).
National AN-165 (2pp)

7 **"Everything You Always Wanted to Know About the 8038"**
(ICL8038)
Presents answers to the most frequently asked questions about the 8038 function generator and its applications.
Intersil A013 (4pp)

8 **"Implementation of a Scanning Spectrum Analyzer Using the 2920 Signal Processor"**
(2920)
Reviews sampling theory and describes operation of a signal-processing chip used in spectrum analysis for speech processing, industrial control, medical electronics, signal detection and analog signal processing. Includes assembly code listings for processing functions.
Intel AP-29 (23pp)

Instrumentation (cont)

9 **"Instrumentation Amplifiers—They're Great Problem Solvers When Correctly Applied"**
(MN2200)
Covers basic operation and application considerations for instrumentation amplifiers.
Micro Networks AN202 (4pp)

10 **"LD120/LD121 4½ Digit DVM"**
(LD120, LD121)
Details construction of a DVM using these devices.
Siliconix DA77-2 (4pp)

11 **"LM2907, LM2917 Tachometer/Speed Switch Building Block Applications"**
(LM2907, LM2917)
Covers basic circuit and use. Applications illustrated include: speed switch, analog display drive, automotive tachometer, motor speed controls, skid sensor, A/D converter, frequency doubler.
National Linear Applications Handbook AN-162 (16pp)

12 **"Low Cost Digital Panel Meter Designs"**
(ICL7106, ICL7107)
Supplies complete assembly instructions for Intersil's LCD and LED evaluation kits as well as descriptions of individual components.
Intersil A023 (6pp)

13 **"RMS Converters and Their Applications"**
(LH0091)
Covers RMS converter basics and specifications. Sketches applications including spectrum analysis, harmonic distortion, noise, vibration analysis, and DVM uses.
National Special Functions Databook AN-180 (4pp)

14 **"Solid State Altimeter for Transponder Applications"**
(LX3702)
Describes a solid state altimeter using a pressure transducer. The unit provides an altitude transmission code for use with transponders, plus digital readout.
National AN-109 (8pp)

"The Integrating A/D Converter"
See (Interface) Converters (Intersil)

15 **"Thermometer for Albacore Fishing"**
(MONOCHIP)
Discusses characteristics of a thermometer used for albacore fishing built on a semi-custom chip. Includes schematic and block diagram.
Interdesign APN-21 (3pp)

16 **"Waveform Generator"**
(MONOCHIP)
Describes using two of the devices in a wave form generator application that produces sine, triangle, and square wave outputs. Provides schematics and a discussion of performance.
Interdesign APN-8 (10pp)

Modulators

17 **"Application of the CA1524 Series Pulse-Width Modulator ICs"**
(CA1524, CA2524, CA3524)
Reviews pulse-width modulated circuits and gives several applications of the CA1524 series in power supply circuits.
RCA ICAN-6915 (19pp)

LINEAR

Modulators (cont)

1 **"Deadband Control with the SG1524 Regulating Pulse Width Modulator Circuit"**
(SG1524, SG2524, SG3524)
Discusses techniques to control the amount of deadband in push-pull inverter applications.
Silicon General Linear Brief 6 (1pp)

2 **"Designing with the SG1525/1527 Series of Pulsewidth Modulators"**
(SG1525, SG1527)
Discusses application of pulsewidth modulator ICs in a variety of output configurations, including bipolar power transistor, power FET, low-power transformer and single ended.
Silicon General ANSG1525/1527 (7pp)

3 **"Simplifying Converter Design with a New Integrated Regulating Pulse Width Modulator"**
(SG1524, SG2524, SG3524)
Describes various functions within the device and describes such applications as a low current polarity converter, a DC to DC converter, and a +5 to ±15V flyback converter.
Silicon General (7pp)

4 **"The CA1524E Pulse-Width Modulator-Driver for an Electronic Scale"**
(CA1524E)
Details the application of the CA1542E pulse-width modulator IC as the driving source for an electronic scale.
RCA ICAN-7174 (2pp)

5 **"The RCA CA1524E Pulse-Width Modulator-Driver for an Electronic Scale"**
(CA1524E)
Although the CA1524E is most often used in voltage-regulator applications, it can also be employed as the driving source for an electronic scale.
RCA ICAN-7174 (2pp)

Motor Control

6 **"Motor Control"**
(LAS6300, LAS8500)
Gives details on DC motor control, half-bridge motor drivers, and stepper motor drivers.
Lambda Semiconductors Applications Handbook VI (12pp)

7 **"Moving Toward Monolithic Circuits in Small Motors"**
Discusses the application of integrated circuits in low-power motors used in peripherals, fans, and industrial controls. Covers different motor types and packaging considerations.
Sprague TP-82.3 (6pp)

8 **"Use Motor-Drive IC to Solve Tricky Design Problems"**
Describes uses of the SG3635 as a switch-mode motor-speed controller, driver for long communications lines or power transistors, and (in combination with a pH probe) as a 3-mode controller.
Silicon General AN-SG3635 (6pp)

9 **"Using the HV-1000 Induction Motor Energy Saver"**
(HV-1000)
Discusses load anticipation and basis circuit application of HV-1000 also treats measurement of power savings, handling precautions and reliability.
Harris Semiconductor AN-542 (9pp)

Multipliers

10 **"Analog Multiplier"**
(RC4200)
Includes functional description, electrical characteristics and circuit designs for multiplier and divider, square root, squaring and rms-to-dc converter circuits.
Raytheon (23pp)

11 **"Analog Shaping"**
(4301)
Describes the use of the 4301 multifunction circuit which has the transfer function XY/Z. Includes rms to dc conversion, exponentiation, trigonometric functions, vector computation, and use as a log amp.
Burr-Brown AN-70 (5pp)

"Function Circuits, Design and Applications"
See listing under (Linear) General (Burr-Brown)

12 **"Linear-Antilog Voltage Controlled Amplifiers"**
(SSM2000, SSM2020)
Discusses control circuits, voltage controlled amplifiers, and a four quadrant multiplier among other applications.
Solid State Micro Technology for Music (9pp)

13 **"Log/Lin Multiplier"**
(MONOCHIP)
Describes an IC multiplier which achieves low noise and distortion. Covers all phases of development from initial concept and breadboarding to integration in an audio sweep function generator.
Interdesign APN-3 (11pp)

14 **"Multiplier Application Guide"**
(AD530, AD531, AD532, AD533, AD534, AD536)
Explains multiplier basics, upkeep, and use in a variety of applications including instrumentation functions, signal generators and filters, and to augment the performance of other circuits.
Analog Devices (40pp)

15 **"Wideband Amplifier/Multiplier"**
(SG1402)
Operation and applications of the SG1402. Describes use as a single-ended variable gain amplifier, a modulator, and a demodulator.
Silicon General Linear IC Product Guide (4pp)

Phase Locked Loops

"A Medium Cost PLL Varactor Tuning System Utilizing Off-the-Shelf Logic"
See listing under (Linear) Consumer, TV (Motorola)

16 **"A New Generation of Integrated Avionic Synthesizers"**
Discusses several different types of servo phase locked loop systems and describes a synthesizer for avionic equipment.
Motorola AN-553 (9pp)

"A Phase-Locked Loop Tuning System for Television"
See listing under (Linear) Consumer, TV (Motorola)

17 **"A Wide Tracking Range Precision PLL System Using the XR2212 and XR4151"**
(XR2212, XR4151)
A two-chip PLL system is described which offers extremely wide tracking range without harmonic locking.
Exar AN-12 (3pp)

LINEAR

Phase Locked Loops (cont)

1 **"Applications of the COS/MOS CD4059A Programmable Divide-by-N Counter: Digital Frequency Synthesis for FM Tuners and CB Transceivers"**
(CD4059)
Discusses frequency synthesis using the counter for an FM digital tuner and a CB transceiver.
RCA ICAN-6374 (12pp)

2 **"Clock Recovery System"**
(XR2212, XR320)
Describes the design of a PLL system that can be used to recover the clock from a serial data stream using NRZI protocol with excellent stability.
Exar AN-19 (4pp)

3 **"Crystal Switching Methods for MC12060/MC12061 Oscillators"**
(MC12060, MC12061)
Discusses methods of using diodes as rf switches to select crystals for these oscillators. The techniques are useful for electronic selection of one of a group crystals with minimum disturbance to the series resonant frequency of the selected crystal.
Motorola AN-756 (5pp)

4 **"Designing Wide Tracking Phase-Locked Loop Systems"**
(XR2212, XR320, XR084)
Describes the design of a tracking PLL with a tracking range of greater than 100:1, with no harmonic locking problems.
Exar AN-18 (4pp)

5 **"Low-Power Digital Frequency Synthesizers Utilizing COS/MOS ICs"**
(CD4000 Series)
Reviews digital phase-locked loops. Describes their implementation with CMOS for use in FM receiver synthesizers, both heterodyne and prescaling types.
RCA ICAN-6716 (15pp)

6 **"Phase-Locked Loop Design Fundamentals"**
(MC4016, MC4024, MC4044, MC4316, MC4324, MC4344)
Outlines fundamental-design concepts for phase locked loops implemented with ICs. Gives equations using Laplace Transforms needed to evaluate the basic loop performance and briefly describes a design using MC4000 series devices.
Motorola AN-535 (11pp)

7 **"Precision Narrow-Band Tone Detector"**
(XR2213, XR2208)
Describes the use of the XR2213 PLL in conjunction with the XR2208 analog multiplier as a frequency mixer.
Exar AN-21 (4pp)

8 **"Precision PLL System Using the XR2207 and the SR2208"**
(XR2207, XR2208)
Defines phase locked loop parameters and describes this two-chip PLL system. Includes circuit interconnections for both single supply and split-supply operation. Also gives PLL design equations.
Exar AN-06 (6pp)

9 **"SL650 Phase-Locked Loop Applications"**
(SL650, SL651)
Describes the circuit and application of this device that can operate to 0.5 MHz. Applications: Modulators-AM, FM, FSK, PAN, SCAM, tone burst, phase shift, delta, PWM, Waveform Generators-sine, triangle, mark/space ratio, staircase: Demodulators; Modem Systems, and a Digital Voltmeter.
Plessey Semiconductor SL650 Applications (32pp)

Phase Locked Loops (cont)

10 **"Sinusoidal Output from XR-215 Monolithic PLL Circuit"**
(XR215)
Discusses obtaining a sinusoidal output signal which is synchronized to a desired reference or clock output using the device. Provides schematics of device and application.
Exar AN-09 (2pp)

11 **"The RCA COS/MOS Phase-Locked-Loop: A Versatile Building Block for Micro-Power Digital and Analog Applications"**
(CD4046A)
Discusses PLL basics, characteristics of device, and circuit elements. Describes application in FM demodulation, a frequency synthesizer, split-phase synchronization and decoding, and PLL lock detection.
RCA ICAN-6101 (4pp)

12 **"The Solid State Scientific Phase-Locked Loop"**
(SCL4046B, SCL4446B)
Reviews fundamentals and design considerations of phase-locked loops and briefly describes application in FM demodulation, frequency shift keying, PLL lock detection, AM detection, frequency synchronization, signal conditioning and frequency synthesis.
SSS AN-112 (15pp)

13 **"The Technique of Direct Programming by Using a Two-Modulus Prescaler"**
(MC12009, MC12011, MC12013)
Offers a new approach to the construction of a phase-locked-loop divider.
Motorola Semiconductor AN-827 (6pp)

14 **"XR-210/XR-215/XR-S200 Phase Locked Loops"**
(XR210, XR215, XRS200)
Discusses the various parameters and equations used in applying the XR-210, XR-215, and XR-S200 phase locked loops.
Exar AN-22 (12pp)

Photosensitive Devices

15 **"A Precision Light-Sensing Integrated Circuit"**
(ULN-3310Y)

16 **"Applications of Reticon Photodiode Arrays in Electron and X-Ray Detectors"**
(RL Series)
Describes the use of self-scanning photodiode arays for detecting soft X-rays (1 to 10A) and electrons in the 10 to 100 KEV range.
Reticon AN-101 (4pp)

17 **"Understanding Optronics"**
Covers the basic concepts and areas of optoelectronic technology, including light-emitting diodes, photodetectors, photocoupled systems, and lasers. Includes many applications of optoelectronic devices.
Texas Instruments LCB 5472 (225pp) $6.95

Photosensitive Devices (cont)

1 **"Spectral Response of Reticon Linear Photodiode Arrays"**
Gives information on the spectral response and quantum efficiency of the company's linear arrays. Discusses the effects of using different light sources and window materials.
EG&G Reticon AN-121 (15pp)

Power Control

2 **"5 Volt 100 Watt Line Operated Supply with Auxiliary =15V Output"**
(Am6301)
Explains the operation and advantages of the Am6301 in a specific application.
Advanced Micro Devices Analog and Communications Products Data Book (4pp)

3 **"A Conceptually New Quad Power Fault Monitor"**
(SG1548)
Describes a comprehensive fault monitoring system that provides ac line voltage monitoring, real-time clock generation, and programmable switching supply undervoltage lockout protection. Typical applications are provided.
Silicon General AN-SG1548 (8pp)

4 **"A Review of Transients and Their Means of Suppression"**
Discusses different types of transients and provides guidelines for deciding what type and size suppressor to choose for a certain level of protection.
Motorola AN-843 (12pp)

5 **"Applications of the MOC3031 and MOC3041 Zero-Crossing Triac Drivers"**
(MOC3031, MOC3041)
Describes the improved parameters of these devices, and discusses their applications with high-wattage incandescent lamps, matrix switching, microcomputer interfaces, and ac motors.
Motorola AN-916 (8pp)

6 **"Applications of the VN10KM MOS Power FET"**
(VN10KM)
Reviews MOS power technology and characteristics, including load considerations, techniques for interfacing to logic circuits, drive techniques, and example applications.
Siliconix AN79-7 (8pp)

7 **"Controlling Secondary Breakdown in Bipolar Transistors"**
(LT10)
Describes a resistive ballasting technique that allows bipolar single and Darlington power transistors to operate at higher voltages and power densities by controlling secondary breakdown.
National Semiconductor TP-16 (4pp)

"Features and Applications of RCA IC Zero-Voltage Switches"
See listing under (Interface) Switches. (RCA)

8 **"ICs for Phase and Burst Control of SCR of Triac"**
(L120, L121)
Examines 12 ICs which are suitable for SCR and Triac firing. Description includes diagrams, equations, and applications in ON-OFF control and proportional control.
SGS-ATES Technical Note 116 (12pp)

Power Control (cont)

9 **"Motor Speed Applications Using the TDA1085A"**
(TDA1085A)
Discusses control of line-powered resistive and inductive loads using phase control in closed-loop system with tacho-frequency or analog voltage feedback.
Plessey Semiconductor (20pp)

10 **"Phase Control U111B"**
(U111B)
Provides detailed circuit description of bipolar IC forming the heart of a phase controller for varying power to household appliances. Includes example application for controlling universal motor speed.
AEG-Telefunken Halbleiter Informationsdienst 10.78 (16pp.)

11 **"Phase Control of AC Power with the SL440"**
(SL440)
Describes the operation of the SL440 power control circuit, and supply requirements. Applications include use with inductive loads, three phase systems, lighing, heating, motor and power supply control.
Plessey Semiconductor (38pp)

12 **"Power Supply Control Subsystem"**
(AM6300)
Discusses a power supply control subsystem, covering reference source, error amplifier, thermal shutdown, under/overvoltage protection, current limiting, and applications.
Advanced Micro Devices Analog and Communications Products Data Book (8pp)

13 **"Some Applications of a Programmable Power Switch/Amplifier"**
(CA3094)
Brief circuit description of CA3094. Device delivers three watts average power, 10 watts peak power to external load. Applications include Class A power amplifiers and driver amplifiers for complementary transistors, wideband power multivibrators, oscillators, comparators, voltage regulators, analog timers, and motor-speed controllers.
RCA ICAN-6048 (12pp)

14 **"Testing of Feed Forward Control"**
(AM6301)
Describes a simple power supply with switches to control the feed-forward and feedback circuits in order to observe the effects of feed-forward control.
Advanced Micro Devices Analog and Communications Products Data Book (2pp)

15 **"Triac Phase Control Circuits"**
(MONOCHIP)
Illustrates a phase control circuit fabricated on a semi-custom chip. Device provides power supply, 60 Hz zero crossing detector and pulse generator, time delay ramp generator, and triac tigger pulse generator.
Interdesign APN-15 (7pp)

16 **"Two-Point Driver to Temperature Controlling of Inductive Loads with U106BS"**
(U106BS)
Describes use of an integrated zero-crossing switch to control an air-conditioner compressor motor for maintaining a preset temperature.
AEG-Telefunken Halbleiter Informationsdienst 4.77 (4pp)

17 **"Using the VN64GA High Current, High Power MOS Power FET"**
(VN64GA)
Covers geometry and operating characteristics of MOS power FETs; including examples of linear and switching applications.
Siliconix AN79-5 (6pp)

APP. NOTE DIRECTORY

LINEAR

Power Control (cont)

1 **"Zero-Voltage Switch U217B is Two-Step Temperature Controller with Superimposed Proportional Behavior"**
(U217B)
Offers circuit description and diagrams for applying a zero-voltage switch in a proportional temperature controller.
AEG-Telefunken Halbleiter Informationsdienst 12.78 (2pp.)

Power Supplies

2 **"A Dynamically Balanced 5V, 55A Line-Operated Switching Power Supply"**
(LAS3840, LAS8101, LAS723B)
This note describes a 5V, 55A push-pull switching power supply incorporating a simple technique for achieving transformer volt-time balancing.
Lambda Semiconductors AN 2-2 (20pp)

3 **"A Flyback Switch Mode Power Supply Using the UAA4006-DP"**
(UAA4006)
The basic operation of the UAA4006 IC is explained along with considerations involving its application to flyback switching power supplies.
Thomson CSF Components NA-027R1A (14pp)

4 **"A New Feedback System for Isolated Closed Loop Control"**
(UC1901)
Describes use of the UC1901 to solve problems associated with closing a feedback loop across a voltage isolation boundary. Implementation of each of the IC's operational blocks is discussed along with applications in practical power system designs.
Unitrode (8pp)

5 **"A New Integrated Circuit for Current Mode Control"**
(UC1846)
Describes the advantages of current mode control over PWM approaches to switching power converters, and illustrates the use of the UC1846 current mode control IC in several practical examples.
Unitrode (7pp)

6 **"A Second-Generation IC Switch Mode Controller Optimized for High-Frequency Power MOSFET Drive"**
(U1525A, U1527A)
Describes the UC1525A and its complementary output version, the UC1527A—improved switch mode controllers that include more power supply control functions in the chip and provide an optimum interface for driving high-current power devices.
Unitrode U-89 (11pp)

7 **"Adequate Switching Transistor Drive Produces Fast Transistor Switching"**
(LAS8100)
The LAS8100 solves the problem of providing proper base or gate drive for switching transistors and FET output devices, guaranteeing optimum turn-on and turn-off drive.
Lambda Semiconductors AN 3-1 (6pp)

Power Supplies (cont)

8 **"Applying the UC1840 to Provide Total Control for Low-Cost, Primary-Referenced Switching Power Systems"**
(UC1840)
Explains how the UC1840 off-line controller simplifies the interface between the control IC and the power switch, eliminating many of the isolation boundary problems of a secondary referenced system.
Unitrode U-91 (10pp)

9 **"Design Considerations for Power MOSFET Gate Drive Circuitry"**
A designer's guide to the power MOSFET, discussing basic characteristics and its application in switching regulated power supplies.
Unitrode U-88 (16pp)

10 **"Designing an Efficient and Economic "Flyback" Switch Mode Power Supply with TEA 1001 SP and UAA 4001-DP"**
(TEA1001, UAA4001)
The functions of the TEA1001 and UAA4001 ICs are described along with applicable specs, relationships, and schematics for use in flyback switching power supplies.
Thomson CSF Components NA-011A (19pp)

11 **"Detecting Impending Core Saturation in Switched-Mode Power Converters"**
Presents a technique which prevents saturation of the core of a switched-mode power converter.
Unitrode U-81 (8pp)

12 **"Hybrid Circuits for Low Voltage Switched-Mode Converters"**
Describes some sample hybrid circuits for switched-mode converters and their advantages over a discrete approach.
Unitrode U-82 (9pp)

13 **"LAS3840 Eliminates Transformer Unbalance in Double-Ended Switching Converters"**
(LAS3840)
Reviews the significance of transformer balance in double-ended switching converters and demonstrates the use of the LAS 3840 IC in a 15V to 2V push-pull DC-to-DC converter which eliminates imbalance.
Lambda Semiconductors AN 2-1 (12pp)

14 **"Optimum Base Drive and Protection of Switching Transistors Using the UAA4002"**
(UAA4002)
After discussing the key parameters of power transistors requiring monitoring in switching mode, this note gives a functional description of the UAA4002 along with design precautions. Sample applications include an 8A, 400V switch, a 150W forward-type power supply, and a 200A, 700V transistorized switch.
Thomson CSF Components NA-031A (38pp)

15 **"Output Supervisory Circuits: A New Family of Power Supply Control Devices"**
(SG1543)
Describes ICs that monitor and control the outputs of sophisticated power supplies. Functions provided include overvoltage and undervoltage sensing, current sensing and SCR crowbar firing.
Silicon General AN1542, 1543, 1544, 3523 (8pp)

16 **"Power Supply Building blocks"**
(MONOCHIP)
Describes circuit blocks used in power supply circuits. They include: bandgap voltage regulator, bandgap reference, zener reference and amplifier, start-up circuit, differential amplifier stage, and Darlington pass transistor. Includes schematics.
Interdesign APN-18 (5pp)

LINEAR

Power Supplies (cont)

1 **"Power Supply Circuits Head for Simplicity by Integration"**
Describes several integrated circuits designed specifically for simplifying switching power supply control and improving circuit reliability.
Silicon General (10pp)

2 **"Power Supply Design Using the ICL8211 and ICL8212"**
(ICL8211, ICL8212)
Describes use of these devices as positive and negative voltage regulators, constant current sources, high voltage and overvoltage protection circuits, supply window detectors and power failure-shutdown systems.
Intersil A027 (8pp)

3 **"Power Switch Drivers: New IC Interface Building Blocks for Switched-Mode Converters"**
(SG1627, SG1629)
Details the characteristics and performance of the SG1627/9 designed to interface between the control circuitry for switch mode converters and their high power output stages.
Silicon General (8pp)

4 **"Protect Your Switchers with Digital Current Limiting"**
(SG1549)
Describes operation and application of a current sense latch IC in switching power supplies to provide pulse-by-pulse current limiting.
Silicon General ANSG1549 (4pp)

5 **"RC4193/4391 Switching Regulators"**
(RC4193, RC4391)
Presenting design examples for low-power switching regulator control ICs, this note includes a troubleshooting chart listing common prototype breadboarding problems and possible causes and cures.
Raytheon (23pp)

6 **"Simplified Design of a 220V, 100W Flyback Switch Mode Power Supply Using the TEA 1001-SP"**
(TEA1001)
Explains how the design of a 100W converter with fully protected output is simplified by the use of the TEA1001-SP and a BUV46 high-voltage transistor.
Thomson CSF Components NA-014A (9pp)

7 **"Simplified Design of a 220V, 100W Flyback Switch Mode Power Supply Using the UAA4001-DP"**
(UAA4001)
This note details the functions, operations, and relevant parameters of the UAA 4001-DP, a special-purpose IC which directly controls the base of the switching transistor as well as handling regulation and safety functions.
Thomson CSF Components NA-019A (9pp)

8 **"The Integration of Switching Power Supply Circuitry"**
(SG1525/1527, SG1526)
Reviews past approaches for controlling switching power supplies, and describes new ICs with integrated control/driver functions.
Silicon General (9pp)

9 **"The Output Supervisory Circuit: A New Analog LSI Circuit For Power Supply Control"**
(SG1543, SG2543, SG3543)
Describes the SG1543, an IC that monitors and controls the output of a power supply system. Includes diagrams, schematics and typical applications.
Silicon General (7pp)

Power Supplies (cont)

10 **"The UC1524A Integrated PWN Control Circuit Provides New Performance Levels for an Old Standard"**
(UC1524A)
The added features of the UC1524A (higher power capability, higher operating frequencies, PWM latch, undervoltage lockout, better trimming are described.
Unitrode U-90 (12pp)

11 **"UC3842 Provides Low-Cost Current-Mode Control"**
(UC3842)
A functional description of an integrated pulse-width modulator IC, with suggestions on ways to incorporate it into a power supply.
Unitrode U-100 (14pp)

Preamplifiers

"Audio Handbook"
See listing under (Linear) Consumer, Audio (National)

Rectifiers

12 **"Design Guide—Power Schottky Rectifiers in a Switching Regulator"**
Complete details on the use of power Schottky rectifiers in a switching regulator.
Unitrode U-85 (15pp)

Regulators

13 **"A 25 Watt Off-Line Flyback Switching Regulator"**
(UFN833, UC1842)
Describes a low-cost switching power supply for applications requiring multiple output voltages.
Unitrode U-96 (6pp)

14 **"A New Approach to Switching Regulators"**
Describes a 24 volt 3 ampere switching mode supply which operates at 20 kHz from as 120 volt AC line with 70% efficiency. Briefly discusses load-line shaping to reduce power losses and to reduce noise.
Motorola AN-719 (11pp)

15 **"A New, Versatile PWM Control Circuit for Switching Power Supplies"**
(SG1524B)
Analyzes the performance characteristics of a control circuit for switchmode power supplies. Discusses reference accuracy, low supply voltage protection, elimination of output switching transients, and output voltage and current capabilities.
Silicon General AN-SG1524B (8pp)

16 **"A Unique Converter Configuration Provides Step-Up/Down Functions"**
(MC34063)
The high power-conversion efficiency of switching regulators is making them increasingly popular for power packs in lightweight, portable equipment designs. This note demonstrates how, using a simple inductor, the Motorola MC34063 switching regulator subsystem provides complete step-up/down functions in a minimum component system.
Motorola AN954 (4pp)

LINEAR

Regulators (cont)

“Applications of the CA3085 Series Monolithic IC Voltage Regulators”
(CA3085)
Circuit description of positive regulators with output currents up to 100 milliamperes from − 55°C to + 125°C. Applications include high-current and constant-current regulators; switching, dual-tracking and high-voltage regulators. Use as a general purpose amplifier, and various methods of current limiting are mentioned.
RCA ICAN-6157 (11pp)

2 **“Designing Around the L200 Variable Voltage/Current Regulator IC”**
(L200)
Discusses circuit designs for variable voltage and current regulators, motor-speed control, remote voltage control and battery chargers.
SGS-ATES DN318 (7pp)

3 **“Designing Switching Voltage Regulators with TL497A”**
(TL497A)
Shows how the TL947A simplifies circuit design for step-up and step-down switching voltage regulators, inverting regulators, and combination devices.
Texas Instruments SLVA001 (26pp)

4 **“Flyback and Boost Switching Regulator Design Guide”**
Describes and characterizes flyback and boost switching regulators.
Unitrode U-76 (9pp)

5 **“Hybrid Voltage Regulators”**
(LAS2105, LAS7205, LAS1505, LAS1805)
Gives hybrid voltage regulator basics, specifications on parts, and design examples.
Lambda Semiconductors Applications Handbook VIII (14pp)

6 **“L200 1A/15V Switch Mode Regulator”**
(L200)
Provides circuit-design equations and discusses application constraints for using a programmable voltage and current regulator as a switching power-supply regulator.
SGS-ATES DN319 (8pp)

7 **“LAS6300 DC Motor Switching Control Applications”**
(LAS6300)
Three types of 6300-based switching dc motor control circuits are covered: constant voltage, constant speed, and constant torque. Design steps and examples are included.
Lambda Semiconductors AN 1-4 (7pp)

8 **“LAS6300 Inverting and Step-Up Applications”**
(LAS6300)
This note describes the use of the LAS6300 in a noninverting step-up converter, an inverting step-up converter, and a Cuk converter, which provides both inverted step-up and step-down operation.
Lambda Semiconductors AN 1-3 (8pp)

9 **“LAS6300 Series Applications Information”**
(LAS6300)
Gives design equations for the LAS6300 monolithic switching regulator control circuit applied to single-output and multiple-output 5V, 5A dc-to-dc converters.
Lambda Semiconductors AN 1 (21pp)

10 **“LH1605 Switching Regulator”**
(LH1605)
Details operating theory and analyzes power considerations of the LH1605, a high-efficiency switching regulator designed to minimize power losses. Also describes dc-dc conversion using the LH1605, and suggests other applications.
National Semiconductor AN-343 (10pp)

Regulators (cont)

11 **“Linear Voltage Regulators”**
(Monochip)
A reference book on linear voltage regulators for the semicustom IC designer.
Interdesign APN-27 (16pp)

12 **“Linear Voltage Regulators”**
(LAS3905, LAS1912, LAS1905)
Compares linear voltage regulators from several manufacturers and describes typical application schematics.
Lambda Semiconductors Applications Handbook VII (18pp)

13 **“MOE 6047 Building Block”**
(MONOCHIP)
Discusses circuit with a bandgap regulator and matched current sources for use in D/A converters or as precision current sources. Provides schematics and test data.
Interdesign APN-19 (5pp)

14 **“On the Stability of 1.2V References”**
(AD589, ICL8069, LM113, LM313)
Although 1.2V IC reference diodes using the bandgap principle may offer excellent drift characteristics with extremely low power consumption, they tend to oscillate with certain combinations of reverse current and shunt capacitance.
Analog Devices (1p)

15 **“Protect your Switchers with Digital Current Limiting: A New Current Sense Latch IC Provides Pulse-by-Pulse Control”**
(SG1524)
Discusses operation of a current sensing latch that operates at power supply switching frequencies for fast turn-off on current overload.
Silicon General SG1524 (4pp)

16 **“Resolving the Problems of Switching Mode Power Supplies with the ZN1066”**
(ZN1066)
Describes switching mode power supplies and problems involved in using, including current limit and switching transistor protection, low voltage cutoff, and impulse starting.
Ferranti (20pp)

17 **“Switching Regulator Design Guide”**
An in-depth tutorial on the switching regulator.
Unitrode U-68A (22pp)

18 **“Theory and Applications of the MC34063 and μA78S40 Switching Regulator Control Circuits”**
(MC34063, uA78S40)
Describes in detail the principle of operation of the MC34063 and μA78S40 switching regulator subsystems. Several converter design examples and numerous application circuits with test data are included.
Motorola AN-920 (36pp)

19 **“Using a Dual-Polarity, Tracking Voltage Regulator”**
(SG1501, SG2501, SG3501)
Describes the circuit and use of the SG1501 series of dual regulators.
Silicon General Applications Bulletin 1 (6pp)

20 **“Versatile UC1834 Optimizes Linear Regulator Efficiency”**
(UC1834)
Describes a programmable linear regulator control IC which, with an external pass transistor, forms a complete power supply.
Unitrode U-95 (23pp)

Regulators (cont)

1 **"Voltage Regulator Handbook"**
(LM109, LM117, LM120, LM123, LM125, LM129, LM136, LM137, LM150, LM199, LM320, LM340, LM341, LM7800, LM78L00)
Covers product selection; heat flow and thermal resistance; commercial and custom heat sinks; applications of positive, negative and dual regulators; power supply design and includes data sheets for the product families listed above.
National Voltage Regulator Handbook, $7.00 (139pp)

2 **"μA78S40 Switching Voltage Regulator"**
(uA78S40)
Provides information on the operating principles of a switching voltage regulator and a functional description of the μA78S40.
Fairchild 370 (12pp)

Speech

3 **"Time-Domain Synthesis Gives Good-Quality Speech at Very Low Data Rates"**
(DIGITALKER II)
Discusses time-domain synthesis techniques for producing medium-to high-quality synthetic speech at very low data rates. The low cost of the time-domain synthesis approach results from data compression techniques that yield highly intelligible speech with less than 128 kbits of RAM.
National Semiconductor AN-341 (8pp)

TV

4 **"Application of the MC1377 Color Encoder"**
(MC1377)
Describes the operation and circuit choice foundations for the NTSC or PAL systems' MC1377 RGB signal encoder. Includes an application with the MC1374 FHV modulator.
Motorola Semiconductor AN-932 (12pp)

Telecommunications

5 **"3044-3045 DTMF Group Filters"**
(ITT3044, ITT3045)
Explains dual-tone multifrequency signaling and the demands on a DTMF receiver.
Aptek Microsystems (2pp)

6 **"High-Frequency TTL-Compatible Output from the XR-215 "**
Explains how the XR-215 monolithic PLL circuit and an additional buffer circuit can be used to interface analog signals to digital systems.
Exar AN-27 (3pp)

7 **"MC14412/MC145440 Chip Set Sets New Standard in 300 Baud Modem Designs"**
(MC14412, MC145440)
Describes a modem chip set that offers a significant reduction in the cost and complexity of 300 baud modem designs.
Motorola AN-891 (10pp)

Telecommunications (cont)

8 **"R24LL and R24DC Modem Control Signal to LED Interface"**
(R24LL, R24DC)
Explains how a single hex buffer and coupled LEDs can be used to monitor the control signal outputs of two modem modules.
Rockwell AN-634 (2pp)

9 **"Understanding 300 Baud Modem Specifications"**
A concise guide to modem specifications and terminology, with warnings of common pitfalls.
National Semiconductor AN-392 (11pp)

Thermal Considerations

10 **"A Simple Thermal Analysis Program for Integrated Circuits"**
(MONOCHIP)
Presents a thermal analysis program for determining the temperature at any point on an IC.
Interdesign APN-16 (7pp)

11 **"Transient Thermal Resistance—General Data and Its Use"**
Discusses transient thermal resistance and its use and describes methods using various degrees of approximations to determine the junction temperature rise of a device. Also covers the concept of a duty cycle family of curves to simplify calculation of junction temperature rise under a repetitive pulse train.
Motorola AN-569 (15pp)

Timers

12 **"A 4-Digit, 7-Function Stop Watch/Timer"**
(MM5865)
Gives detailed instructions for the circuit and construction of a 4-digit, 7-function timer with a display resolution of 0.01, 0.1, and 1 second, using the MM5865.
National MOS/LSI Databook AN-169 (14pp)

13 **"MM5865 Universal Timer Applications"**
(MM5865)
Provides block diagram and system description, discusses general timing and programming capabilities, suggests timing and counting applications.
National MOS/LSI Databook AN-168 (10pp)

14 **"Precision Timer"**
(ZN1034E)
Explains the device and its use in various applications including a wiper control, a metronome, and a battery charger.
Ferranti Electric (19pp)

15 **"Single-Chip Frequency Synthesizer Employing the XR2240"**
(XR2240)
Describes use of this timer/counter as a single-chip frequency synthesizer: fo = f, (m/n + 1) Where fo <200 kHz. Describes generating 100 Hz synchronized to 60 Hz line.
Exar AN-07 (3pp)

LINEAR

Timers (cont)

1 **"The LX1602A Pressure Transducer and Altimeter Applications"**
(LX1602A)
Describes how to use this transducer along with additional electronics to build an altimeter that operates over a range of −1,000 feet to +50,000 feet.
National AN-91 (3pp)

2 **"Using National Clock Integrated Circuits in Timer Applications"**
(MM5309, MM5311, MM5312, MM5315)
Describes demultiplexing techniques to generate time intervals and low frequency square waves. Gives as an example a failsafe lighting timer.
National MOS/LSI Databook AN-143 (4pp)

3 **"Using the MC-116"**
(MC-116)
Explains how to shorten sequences and obtain automatic reset for continuous sequencing in the MC-116 10-output monolithic sequencer.
Analog Systems AN-1003 (1pp)

Transducers

4 **"Accuracies of the AD590"**
(AD590)
Tables of maximum errors for device by grade involving limited temperature spans.
Analog Devices (4pp)

5 **"Crystal Oven Controller and Precision Voltage Reference"**
(LM199, LM299, LM399, LM199A, LM299A, LM399A)
Shows the use of the LM199 both as an oven temperature controller and a voltage reference at the same time.
National Linear Applications Handbook LB-31 (2pp)

6 **"Installation Ideas for Pressure Transducers"**
(LX1600, LX1700, LX1400, LX1701)
Provides suggestions for mounting National transducers for various applications. Includes diagrams and typical mounting configurations.
National AN-92 (4pp)

7 **"LX Series Pressure Transducers: Design and Applications Information"**
(LX1600A, LX1601A, LX1602A)
Describes hybrid transducer circuit and applications, including pressure to frequency converter, latching altitude detector, digital readout barometer and altimeter.
National AN-94 (8pp)

8 **"Pressure Transducer Handbook"**
Supplies product descriptions and talks about related topics including installation, fluid flow, auto-referencing and signal conditioning. Covers applications in the acoustic, medical, and automotive areas.
National Semiconductor $3 (130pp)

9 **"Pressure Transducer Load Cell"**
(LX1700G)
Describes use of LX1700G pressure transducer to measure weight.
National AN-95 (4pp)

Transducers (cont)

10 **"Pressure Transducers as Accelerometers"**
(LX1700G)
Discusses uses of accelerometers and describes scheme of converting LX series pressure transducers to cover ranges from fractions to thousands of g's.
National AN-96 (4pp)

11 **"REF-02 Temperature Controller"**
(CMP-02, REF-02)
Describes temperature control using the REF-02 and the CMP-02 comparator.
Precision Monolithics AB-4 (1pp)

12 **"Temperature Compensation Methods for the Motorola X-ducer Pressure Sensor Element"**
Presents techniques for temperaure compensation of both span and offset voltage for the X-ducer piezoresistive pressure sensor. The techniques use relatively simple passive elements to generate temperature-dependent voltages that act counter to the temperature characteristics of the transducer.
Motorola Semiconductor AN-840 (20pp)

13 **"Temperature Compensation, Calibration and Applications of Motorola's X-ducer Pressure Sensor"**
Illustrates temperature compensation methods along with applications of the X-ducer pressure sensor element.
Motorola AN-922 (6pp)

14 **"The Multi-Level Switch Kit, Part No. SK1007"**
Details the use of any LX series pressure transducer to produce a high level analog output as well as three independent switch points.
National TB-1 (2pp)

15 **"Thermometer Application of the REF-02"**
(REF-02)
Discusses thermometer essentials, bandgap voltage reference theory, and basic circuit design using device.
Precision Monolithics AN-18 (4pp)

16 **"Transducer Fluid Filled Option"**
Describes the "Fluid-Filled" methods of protecting transducers from hostile environments. Rates the resistance of silicone rubber to some common fluids.
National TB-8 (2pp)

17 **"Transducer Interfacing Handbook"**
Basic guide to analog signal conditioning required to excite and amplify the output of commonly used input transducers. Describes over 100 applications to the most popular kinds of transducers for sensing temperature, pressure, force, flow and level.
Analog Devices $14.50 (254pp)

18 **"Transducer Sensor Diaphragm 15 Million Cycle Life Test"**
Findings in the continuing test of National's transducer sensing elements—a silicon membrane approx. 1 mil thick.
National TB-3 (1pp)

19 **"Transducers in Fluid Flow Applications"**
(LX1602A)
Discusses application of LX1602A in pressure vessel, open flow and closed flow applications.
National AN-93 (8pp)

20 **"Use of the SK1007 Pressure Transducer Kit in Vault Alarm Systems"**
Describes application of this multi-level switch kit with a pressure transducer in vault alarm systems.
National TB-7 (2pp)

LINEAR

Video

1 **"CDP1800-Based Video Terminal Using the RCA Video Interface System"**
(CDP1869, CDP1870, CDP1876)
The VIS chip set for controlling video terminals, industrial displays, and broadcast-television text overlays is described in detail with a sample implementation for a low-cost 40-character x 24-line VDT.
RCA ICAN-7032 (36pp)

2 **"External Synchronization System on EF9364 Display Circuit"**
(EF9364)
Explains the signals used and the modifications required to superimpose text given by the EF9364 on a 625-line TV image.
Thomson CSF Components NA-010A (3pp)

3 **"Input/Output of Real Time Video Data using the NCR45CT6"**
(NCR45CT6)
Describes how the NCR45CT6 can be used to reformat real-time video data for an array of NCR45CG72 GAPP devices.
NCR Corporation GAPP Application Note 1

4 **"Synchronizing the EF9340 for Incrustation"**
(EF9340, EF9341)
This note introduces a system that allows the EF9340 to be synchronized with an external video signal for incrusting a character string into a video image.
Thomson CSF Components NA-020R1A (10pp)

Video (cont)

5 **"TMP Row and Attribute Table Lookup Operation"**
Gives a detailed description of the operation of the TMP Attributes Demo Program. The program demonstrates row table lookup operation in the TMP while at the same time putting out a visual display of the various video attributes available in the chip.
National Semiconductor AN-354 (8pp)

Voltage References

6 **"A Micropower Voltage Reference"**
Describes a voltage reference made by operating a JFET slightly below pinch-off along with an op amp to convert current to voltage.
National Linear Applications Handbook LB-34 (2pp)

"Analog Products: Features and Applications"
(See listing under (Linear) Amplifiers, Operational (PrecisionMonolithics Inc.)

"Crystal Oven Controller and Precision Voltage Reference"
See listing under (Linear) Transducers (National)

7 **"Precision Voltage References for the MC10315/MC10317 Flash A-D Converters"**
(MC10315, MC10317)
The MC10315 and MC10317 flash A/D converters have a low reference input resistance, thus requiring a significant current be supplied from a precision source. Most precision monolithic voltage references available cannot supply the required current directly, and therefore a current booster is necessary. Several circuit configurations are described which can be used to supply the reference voltage, and current, at the stability required by the A/D converters.
Motorola Semiconductor AN-877 (10pp)

MEMORY

Analog

1 **"A Programmable Binary-Analog Correlator"**
(BAC-32)
Describes device and its capability to perform various mathematical operations like convolution and correlation. Applications such as filtering, correlation, decoding, and chirp detection are shown.
Reticon AN-106 (14pp)

2 **"A Tapped Analog Delay for Sampled Data Signal Processing"**
Introduces tapped analog delays and gives various applications previously accomplished by digital techniques.
Reticon AN-105 (11pp)

3 **"A Time Base Compressor for Low-Frequency Chirp-Z Transforms"**
(R5601)
Examines time base compression (TBC) of data recorded for analysis. Illustrates implementation of a TBC system using the device and low-cost digital memories. Block and timing diagrams are supplied.
Reticon AN-115 (18pp)

4 **"Acoustic Applications of Serial Analog Delay Devices"**
(SAD1024)
Covers use in reverberation, vibrato, chorus, wow and flutter control plus considerations in using this device.
Reticon AN-104A (8pp)

5 **"Analog Analog Correlator/Convolver"**
Presents an LSI discrete-time processing device capable of performing the convolution or correlation of two analog signals at clock rates up to 5 MHz.
Reticon AN-116 (4pp)

6 **"Charge Transfer Devices for Sampled-Data Processing"**
Discusses the application of charge transfer devices to analog and digital signal processing. Compares CTD devices. Describes Tapped Analog Delay, the Binary Analog Correlator, the Analog Correlator and the Transversal Filter.
Reticon AN-114 (11pp)

7 **"MOS Delay Lines"**
(DM8000, DM8510, DM8830)
Covers use of MOS shift registers to build delay lines.
National MB-4 (2pp)

8 **"Serial Operation of Clocked Analog Delay Lines to Obtain Long Delay"**
(SAD1024A)
Describes advantages, coupling, and performance of device.
Reticon AN-109 (8pp)

Bubble Memories

9 **"8085 to BPK Interface"**
(BPK72)
Provides detailed hardware and software information on how to interface a BPK72 bubble memory with an 8085 microprocessor.
Intel 1985 Memory Components Handbook AP-150 (68pp)

10 **"Powerfail Considerations for Magnetic Bubble Memories"**
(BPK72)
Describes a power-fail circuit incorporated in Intel Bubble Memory Boards that provides improved noise immunity and a four-times reduction in the time required to shut down the bubble system.
Intel 1985 Memory Components Handbook AP-127 (22pp)

Bubble Memories (cont)

11 **"Software Design and Implementation Details for Bubble Memory Systems"**
Examines the programmatic interface to the 7220-1 bubble memory controller and how communications between a host processor and the bubble subsystem govern all bubble system operations.
Intel 1985 Memory Components Handbook AP-157 (36pp)

Character Generators

12 **"128 Characters with the DM8678"**
(DM8678)
Describes the control logic necessary to generate 128 characters and attributes.
National Memory Applications Handbook (9pp)

13 **"7 x 9 Display Character Generator"**
Uses three MOS ROMs and some TTL logic to create a font of 64 7 x 9 dot-type characters. A circuit diagram and suggested character forms are provided.
National MB-13 (2pp)

14 **"DM8678 Bipolar Character Generator"**
(DM8678)
Explains the operation of the device and the various features which include circuit address latches, the line counter, the 7-bit shift register, and the output buffer.
National AN-167 (4pp)

15 **"DM8678 Character Generator Emulator"**
(DM8678)
Describes a field programmable emulator to be used when developing new character fonts or graphic symbol sets for the DM8678.
National Memory Applications Handbook (2pp)

16 **"Digital Display Systems"**
Using TTL compatible MOS ROMs to generate displays. Gives circuit diagrams and a sample readout.
National MB-8 (2pp)

"The Systems Approach to Character Generators"
See listing under (Memory) ROMs. (National)

Controllers

17 **"74LS764/65 Dynamic RAM Dual-Port Controller"**
(74LS674, 74LS765)
Details on the architecture, functions, and applications of a dual-port dynamic RAM controller.
Signetics AN-211 (5pp)

18 **"TMS4416/7220 Graphics"**
(TMS4416, 7220)
Describes a design coupling the NEC 7220 and the TMS4416 in a single plane, bit-mapped graphics system. Provides a detailed example of the necessary memory interface.
Texas Instruments SMBA001 (7pp)

MEMORY

Controllers (cont)

1 **"TMS4500A Clock Synchronization"**
(TMS4500A)
Describes a simple clock synchronization circuit for use in asynchronous systems using the TMS4500A.
Texas Instruments DRC-2

2 **"TMS4500A Dynamic RAM Controller Users Manual"**
(TMS4500A)
Describes the functional operation of the TMS4500A and how it can be used in a microprocessor system.
Texas Instruments SCG690

3 **"The TMS4500A in an Asynchronous Bus System"**
(TMS4500A)
Details the logic required to implement a TMS4500A within an asynchronous bus system.
Texas Instruments DRC-1

E^{2}PROMs

4 **"Fifteen Common EEPROM Questions Answered"**
Fields questions on inadvertent write commands, temperature effects, and other common EEPROM issues.
Xicor AB Vol. 2, No. 17 (4pp)

5 **"Uncompromising Features Highlight the 5V EEPROM"**
(X2804A, X2816A, X2818A)
A brief history and description of 5V EEPROMs, with a discussion of the benefits they offer.
Xicor Data Book 5-95 (7pp)

6 **"Understanding Your Application in Choosing NOVRAM, E2 PROMs"**
An examination of the difference between nonvolatile RAMs and EEPROMs, focusing on making the right choice for particular applications.
Xicor Data Book 5-17 (11pp)

7 **"5V Only EEPROM Mimics Static-RAM Timing"**
(X2816A, X2804A)
An introduction to n-channel MOS technology and EEPROMs.
Xicor Data Book 5-71 (4pp)

8 **"Data Polling and Page Write Combine to Offer Improved WriteTiming Characteristics"**
(X28256)
Presents a simple software technique of testing for the early completion of a nonvolatile write cycle.
Xicor AB Vol. 1, No. 2 (3pp)

9 **"EEPROM Provides the Solution to Field Alterable Software"**
Discusses a hybrid approach to field alterable software using a combination of EEPROMs and ROMs or EPROMs.
Xicor AB Vol. 2, No. 15 (3pp)

10 **"EEPROMs vs Battery Backed-Up CMOS RAM Nonvolatile Memory Systems"**
Compares the technology, reliability, real estate, density, cost, and availability issues of different approaches to nonvolatile memory systems.
Xicor AB Vol. 3, No. 19 (3pp)

E^{2}PROMs (cont)

11 **"Nonvolatile Date Integrity: Inadvertent Write/Store Elimination"**
Discusses the memory protection features of the company's nonvolatile memory ICs.
Xicor AB Vol. 1, No. 1 (4pp)

12 **"Nonvolatile Memories Keep Appliances Out of the Dark"**
(X2444)
Describes the use of the X2444 NOVRAM in a microwave oven.
Xicor Data Book 5-89 (6pp)

13 **"Nonvolatile Memory Gives New Life to Old Designs"**
(X2443)
A broad discussion of the capabilities of nonvolatile memories and the advantages they bring to a design.
Xicor Data Book 5-111 (7pp)

14 **"Replacing DIP Switches with Nonvolatile Technology"**
(X2444)
Describes a method for replacing DIP switches with NonvolatileRAM. Includes 6801 code for making the transition.
Xicor AB Vol. 1, No. 7 (4pp)

15 **"Save Volatile Data During Power Loss"**
Presents a design that transfers data securely between volatile and nonvolatile memory during a power loss.
Xicor Data Book 5-119 (7pp)

16 **"The NOVRAM Family: A New Domain of System Possibilities"**
(X2201A, X2210, X2212, X2400, X2001, X2002, X2004)
Describes the NOVRAM, a static volatile RAM overlaid bit for bit with a nonvolatile EEPROM "shadow" memory.
Xicor Data Book 5-103 (7pp)

17 **"The Nine Most Frequent NOVRAM Questions"**
(X2200 Series)
A clarification of nine point in regard the operating characteristics of nonvolatile RAM.
Xicor AB Vol. 2, No. 10 (3pp)

18 **"The X2444 Serial NOVRAM Teams up with the 8051 Microcontroller Family"**
(X2444, 8051)
Explains the use of the X2444 256-bit serial NOVRAM as a parameter store and scratchpad memory.
Xicor AN-105 (5pp)

19 **"Using Data Polling in an Interrupt Driven Environment"**
(X2864A)
Tutorial information on the use of data polling in the X2864A EEPROM, including 6800 code for its use in an interrupt environment.
Xicor AB Vol. 2, No. 12 (3pp)

20 **"X2816A Design Allows Upgrade to X2864A and Beyond"**
(X2816A, X2864A)
Explains how a universal socket can accommodate 16K to 256K EEPROMs by means of two jumpers.
Xicor AB Vol. 1, No. 5 (3pp)

MEMORY

E^{2}PROMs (cont)

1 **“Reliability Issues for the MCM2833”**
(MCM2833)
To understand the reliability issues of a E2PROM, it is necessary to describe the functionality of its memory cell. The MCM2833 memory cell is discussed in this context with emphasis on data retention and program/erase endurance.
Motorola AN-908 (2pp)

2 **“““Reliability Aspects of a Floating Gate E2PROM”””**
(2816)
Discusses a number of E2PROM failure mechanisms for both erase/write cycling and data retention.
Intel 1985 Memory Components Handbook AP-100 (7pp)

3 **“Data Protection for E2PROMs and NVRAMs”**
(2817, 2004, 2816A)
When power is switched, unstable system control signals can alter the data in the non-volatile cells of all in-circuit non-volatile memory devices. This note discusses the nature of these unstable signals and shows how on-chip circuitry protects the data integrity of Intels 2817A, 2004, and 2816A memories.
Intel 1985 Memory Components Handbook AP 165 (10pp)

4 **“MCM2833 Functional Description”**
(MCM2833)
Describes the operation and performance of the MCM2833 EEPROM.
Motorola AN-909 (5pp)

5 **“Reliability Issues for the MCM2833”**
(MCM2833)
To understand the reliability issues of a E2PROM, it is necessary to describe the functionality of its memory cell. The MC2833 memory cell is discussed in this context with emphasis on data retention and program/erase endurance.
Motorola AN-908 (2pp)

6 **“A Voltage Switching Circuit for the ER2810”**
(ER2810)
The ER2810 electrically erasable read only memory requires switching of voltages on various pins to control the mode of operation. This note describes a simple, low-cost circuit for providing this control.
General Instrument Bulletin 1219 (1pp)

7 **“Data Retention Testing of ER3400”**
(ER3400)
Describes nondestructive analog-test procedure for determining EAROM data-retention capability.
General Instrument Bulletin 1210 (1pp)

8 **“EAROMs Replace Mechanical Switches”**
(ER1400)
Reports how CRT terminal makers use EAROMs to replace DIP switches to lower costs, reduce parts count, improve reliability and obtain field programmability of hardware options.
General Instrument Bulletin 1209 (3pp)

E^{2}PROMs (cont)

9 **“EAROM—The Electrically Word Alterable Memory for Permanent Storage”**
Presents a concise description of MNOS technology, EAROM characteristics and some applications.
General Instrument Bulletin 1215 (2pp)

10 **“Generating EAROM Programming Voltages from a 5-Volt Supply”**
Most EAROMs and EEPROMs require relatively high voltages for erase and write operations. This note describes a low-cost DC to DC converter circuit capable of generating this voltage from a + 5 volt power supply.
General Instrument Bulletin 1220 (1pp)

11 **“Interfacing the ER3400 to an Eight Bit Microcomputer”**
(ER3400)
Describes how to interface and control two ER3400 EAROMs with a PIC 1650 microcomputer. The ER3400 is organized as 1K x 4 bits. To obtain an 8-bit data word with a minimum of I/O lines and no additional hardware, two 1K x 4 bit EAROMs are connected in parallel and accessed simultaneously. In addition to creating an 8-bit data word, this effectively cuts erase and write times in half.
General Instrument Bulletin 1218 (3pp)

12 **“Measuring Data Retention of the ER0082”**
(ER0082)
The length of time that data may be retained in a non-volatile memory is a crucial parameter to the system designer. Many EAROM devices incorporate circuitry that enables this parameter to be measured. The method for doing this is described in this note.
General Instrument Bulletin 1222 (1pp)

13 **“Microprocessor Interfaces to the ER1400 EAROM”**
(ER1400)
Shows how to interface a serial I/O EAROM with four popular microprocessors using a variety of techniques.
General Instrument Bulletin 1207B (5pp)

14 **“N Channel EEPROMs Offer Increased Speed and Density”**
Discusses the evolution of electrically alterable non-volatile memory technology from p-channel to n-channel devices, and its impact for the system designer.
General Instrument Bulletin 1216 (4pp)

15 **“The ER3400: An Easy to Use 4K EAROM”**
(ER3400)
Describes use of the ER3400 p-channel EAROM in both microprocessor-based and random-logic-based systems requiring either in-system or out-of-system programming.
General Instrument Bulletin 1217 (3pp)

16 **“The Role of Non-Volatile Memories in Consumer Electronics”**
Briefly describes MNOS technology, updating EAROMs, and use of EAROMs to store data, to keep track of system status, and store programs for microcontrollers.
General Instrument Bulletin 1202 (3pp)

MEMORY

E²PROMs (cont)

1 **“Memory Margining Byte-Wide EEPROMs”**
(NCR 52832, 52864)
Gives information for margining and predicting retention time for a family of byte-wide electrically erasable PROMs.
NCR MD-215 (10pp)

2 **“Memory Margining Serial I/O EEPROMs”**
(NCR 52801)
Gives information on margining and predicting retention time for a family of serial I/O electrically erasable PROMs.
NCR MD-213 (7pp)

3 **“Memory Margining Serial I/O EEPROMs”**
(NCR 59308)
Describes margining and predicting of retention time for a family of serial I/O electrically erasable PROMs.
NCR MD-214 (6pp)

4 **“Microprocessor Interface to the NCR Bytewide”**
(NCR52832, NCR52864)
An introduction to 5V-only electrically erasable PROMs and principles of microprocessor interfacing.
NCR MD-208 (6pp)

5 **“Microprocessor Interface to the NCR Bytewide E²PROMs”**
(NCR52832, NCR52864)
An introduction to 5V-only electrically erasable PROMs and principles of microprocessor interfacing.
NCR MD-208 (6pp)

6 **“E-Squared Reliability Report”**
(5213)
Focuses on a 2048x8-bit electrically programmable and erasable read-only memory and its read integrity, data retention reliability, and endurance over time.
Seeq AN-1 (5pp)

7 **“Avoiding Problems Caused by Capacitive Coupling Between Input Signal Lines on 21-Volt EEPROMs”**
(NMC2816)
The high input impedance of MOS memories makes board layout, signal shielding, packaging, and drive characteristics important in minimizing the effects of pin-to-pin coupling between input signal lines. Note explains methods for preventing data loss.
National Semiconductor AB-13 (2pp)

8 **“Designing with serial EEPROMs”**
Discusses serial EEPROMs in terms of power transient protection and interfacing to parallel and serial ports.
NCR MD-209 (7pp)

9 **“Designing with the NMC9306/COP494—A Simple to Use E²PROM”**
(NMC9306/COP494)
Outlines several methods of interfacing an NMC9306/COP494 with the COPS family and other microprocessors.
National Semiconductor AN-338 (8pp)

10 **“EEPROM Application Note; Vpp Generation on Bcard”**
(NMC2816, NMC9716)
The NMC2816 requires a 21-volt pulse for writing and erasing, with the rise time on the pulse ideally going from 5 to 21 volts in 600 μs. This note discusses two methods of generating the required V_{pp} voltage or the high-level pulse from a 5-volt supply.
National Semiconductor AN-328 (6pp)

E²PROMs (cont)

11 **“EEPROM Stores High Scores in Video Games”**
Discusses the use of 5V-only EEPROMs in video game cartridges.
General Instrument AB-199 (2pp)

12 **“E²ROM Interfacing”**
(52B33)
Covers interfacing issues for linking 8085, 8086, 8088, Z80, and 71840 microprocessors with both latched and timer-type E²ROM devices.
SEEQ AN-8 (17pp)

13 **“High-Density EEPROM Design Considerations”**
(52832/64)
Outlines hardware and software design considerations in applying high-density EEPROMs. Details hardware design techniques for implementing a 28-pin socket that accepts EEPROMs from multiple vendors. Includes hardware and software considerations for interfacing the NCR 52832 to various microprocessors.
NCR Corp. MD-204 (7pp)

14 **“Low-Density Byte-Wide EEPROM Applications”**
(NCR53001, NCR53002, NCR53004)
Describes the functionality of byte-wide, fast-write, 5V-only EEPROMs and outlines possible applications and system integration techniques.
NCR Corp. MD-207 (4pp)

15 **“Microprocessor Interfacing with the 52B13 Latched 16K EEROM”**
(52B13)
Discusses the interfacing of the 52B13 latched electrically erasable read-only memory to a microprocessor bus.
SEEQ (9pp)

16 **“NOVRAM Family, Easier Than Ever to Use”**
Explains the basics of NOVRAMs, static RAMs overlaid with EPROMs, and discusses their use in a 6502-based system.
Xicor AN-101 (6pp)

17 **“Page-Alterable EEPROMs”**
(NCR52832, NCR52864)
Outlines the key advantages and applications of page-alterable, 5V-only, high-density EEPROMs compared to byte-alterable EEPROMs of equal density.
NCR Corp. MD-202 (6pp)

18 **“Power-Up/Down with Seeq’s 52BXX E²ROM Family”**
(52B13, 52B23, 52B33)
As the use of E²ROMs increases, applications are expanding into environments where Vcc may be undependable and power glitches may occur. Describes a simple method for preventing false writes during power-up/down conditions.
SEEQ AN-10 (4pp)

19 **“Protecting Data in NMC9306/COP494 and NMC9346/COP495 Serial EEPROMs”**
(NMC9346/COP495, NMC9306/COP494)
Explains the read-only mode of a nonvolatile serial access memory and its activation to prevent accidental data disturbance during power up and power down.
National Semiconductor AB-15 (2pp)

MEMORY

E²PROMs (cont)

1 **"SNOS Non-Volatile Memory Reliability"**
A discussion of the Silicon Nitride Oxide Silicon process, which used an n-channel, silicon gate, double-level polysilicon technology.
NCR MD-210 (16pp)

2 **"Serial EEPROMs"**
(NCR59308)
Outlines hardware and software considerations in the design of low-density serial EEPROMs when used in conjunction with single-chip microcomputers.
NCR Corp. MD-206 (5pp)

3 **"Storing Data in NOVRAM Memories During Power Failure"**
Briefly introducing Novram RAM/EEPROMs, this note gives details for ac and dc power failure protect circuits.
Xicor AN-102 (5pp)

4 **"The World's Easiest to Use EEPROMs are Here"**
(X2816A, X2804A)
Gives full details on the operation of the X2816A 2048x8 and X2804A 512x8 EEPROMs. Topics include compatibility of the X2816A with standard 2Kx8 RAM sockets and microprocessor interfacing.
Xicor AN-104 (6pp)

5 **"Xicor Replaces DIP Switches and Trimmers with NOVRAM Memories"**
Explains how NOVRAM RAM/EEPROMs can replace DIP switches and trimming potentiometers in many applications such as tuneable crystal oscillators, self-calibrating interchangeable probe thermometers, software programmable voltage references, and automatic scale calibrators.
Xicor AN-103 (7pp)

FIFOs/LIFOs

6 **"SN54/74LS222-228"**
(SN54/74LS222-228)
Explains the operation of the SN54/74LS222 Series of FIFOs, which do not offer asynchronous operation under all possible conditions for the IR and OR output status flags.
Texas Instruments SDLA002 (2pp)

7 **"Understanding the IDT/7201/7202 FIFO"**
(IDT7201, IDT7202)
Discusses different types of FIFO queuesTRANSLATION ERRORsimple, fixed length, variable field, fall through, and two-pointer. Also describes their implementation and performance.
Integrated Device Technology (21pp)

General

8 **"An Evaluation Tool for the MC68451 MMU"**
(MC68451)
To evaluate an LSI microprocessor peripheral, it is often necessary to design a prototype board that allows the programmer access to the peripheral. If the peripheral is such that a different system can be used, a "daughter" board can sometimes be added to an existing system, allowing evaluation of the new part without a complete system board. This note describes such as evaluation system for the MC68451 Memory Management Unit.
Motorola AN-880 (6pp)

General (cont)

9 **"Applying Modern Clock Drivers to MOS Memories"**
(DS0025, DS0026)
Covers use of 0025/26 drivers in MOS memory systems. Information includes selection of packages and heat sinks, power dissipation, rise and fall time, power supply decoupling, system clock line ringing and crosstalk, input coupling techniques, and sample calculations.
National Special Functions Databook AN-76 (12pp)

10 **"Designing Synchronous/Asynchronous-Compatible Memory Systems"**
Explains the difference between synchronous and asynchronous memory systems, the tradeoffs, and suitable applications.
Harris TB-58 (3pp)

11 **"Error Detection and Correction Using SN54/74LS630 or SN54/74LS631"**
(SN54LS630, SN54LS631, SN74LS630, SN74LS631)
Discusses the need for improved error detection systems and the use of the SN54/74LS630/1 for reducing downtime in large memory boards.
Texas Instruments CA-201 (18pp)

12 **"Memory Applications Handbook"**
Contains assorted applications material on memory products manufactured by National Semiconductor. Individual application notes described and listed elsewhere.
National $11.00 (206pp)

13 **"Memory Designers Guide"**
(MK4564, MK4116, MK4027, MK4801A, MK4802)
Includes general information, and a number of application notes on dynamic and static RAMs.
Mostek Memory Designers Guide (425pp) $10.00

14 **"Memory Margining for the SNOS Process"**
Outlines procedures for measuring retention and endurance parameters on the company's nonvolatile RAMs and EEPROMs. Discusses techniques for incoming inspection verification of device conformance to published specifications.
NCR Corp. MD-205 (5pp)

15 **"Precautions to Take When Driving Memories"**
When driving memories, problems can arise that cause memory errors or memory damage. This note discusses two problem areas, voltage overshoot and switching spikes, and outlines precautions to be taken.
National Semiconductor AN-305 (4pp)

16 **"Printed Circuit Board Layout for BYTEWIDE"**
Presents the issues involved in minimizing noise in PC board layouts and their application to Bytewide memory designs.
Mostek 1982/83 Memory Designers Guide IV-1 (6pp)

17 **"Reading and Writing in Floppy Disk Systems Using Motorola Integrated Circuits"**
A floppy disk drive requires precision controls to position and load the head, and well-defined read/write signals in terms of amplitude and timing, in order that a viable system will result. This note deals with the read and write data paths, including head control and erase circuitry.
Motorola AN-917 (16pp)

18 **"System Considerations for Using Memories in Leadless Chip Carriers"**
Discusses different types of leadless chip carriers, soldering techniques, substrate choice, chip carrier replacement, and standardization.
Mostek 1982/83 Memory Designers Guide VI-3 (9pp)

MEMORY

General (cont)

1 **"Using Slower Memories with the VIS Display System"**
(CDP1869, CDP1870)
The scheme described nearly doubles memory access time of the system and permits use of memories approximately half as fast as those normally required with the VIS system.
RCA ICAN-6889 (4pp)

Microprogramming

2 **"ER2055 Benchtop Programmer"**
(ER2055)
Enables the user to become familiar with the operation of the ER2055 prior to designing it into a prototype circuit for a manual benchtop programmer.
General Instrument Bulletin 1221 (4pp)

"How to Design with the 8X02 Control Store Sequencer"
See listing under (Microprocessor) Systems (Signetics)

3 **"MC68704P2 8-Bit EPROM Microcomputer Programming Module"**
Provides programming information for construction and operation of the programming module used to program the MC68704P2 EPROM Microcomputer Unit.
Motorola AN942 (21pp)

4 **"Signetics Micro Assembler Reference Manual"**
See listing under (Microprocessor) Programming (Signetics)

5 **"Tri-State Logic in High Speed Memories of Microprogrammed Computers"**
See listing under (Digital) TTL, General (National)

PROMs

6 **"CMOS PROM Power Advantages"**
Compares CMOS PROMs, NMOS EPROMs, CMOS EPROMs, bipolar RAMs, and bipolar power-down PROMs in terms of power and speed.
Harris TB-57 (3pp)

7 **"Harris HH-6616 Compatibility with the 2716 EPROM"**
(HM6616)
Details on the HM-6616 2Kx8 CMOS PROM and two exceptions to pin compatibility with the industry standard 2716 UV EPROM.
Harris TB-56 (2pp)

8 **"Harris' HM-6616 PROM Outperforms EPROM with CMOS Advantages"**
(HM6616)
Compares access time, power consumption, leakage current, temperature range, and supply voltage range for the HM-6616 2-Kword x 8-bit CMOS fuse-link PROM, the 2716 NMOS EPROM, and 27C16 CMOS EPROM.
Harris TB-55 (1pp)

PROMs (cont)

9 **"Two-Line Control of the HM-6641 CMOS PROM"**
(HM6641)
Details on implementing two-line control of a 512x8 CMOS PROM.
Harris TB-46 (3pp)

10 **"32K EPROM Decision TMS2532 or Intel 2732"**
(TMS2532, 2732)
Compares two devices as to operation, microprocessor compatibility, plus timing and electrical parameters.
Texas Instruments Application Report MM9010 (12pp)

11 **"32K EPROM Programming Hardware"**
(MBM2732, 2732A)
Provides a detailed cross reference between these 32K EPROMs and the proper programming hardware.
Fujitsu Microelectronics TB-002 (2pp)

12 **"A CMOS 64K EPROM Using N-Well Technology"**
(MBM27C64)
Describes the design of a new generation of EPROMs using double-polysilicon, p-sub n-well CMOS technology.
Fujitsu AR-002 (4pp)

13 **"A Guide to Implementing Logic Functions Using PROMs"**
Illustrates techniques for using PROMs to efficiently emulate logic functions. Block diagrams provided.
National Memory Applications Handbook (4pp)

14 **"A PROM Programmer for the SC/MP LCDs"**
(MM4204, MM5204)
Provides a method for the user of the SC/MP LCDs to program MM4204 PROMs. Using wire-wrap techniques the user can construct a programmer that plugs into the SC/MP LCDs backplane and programs a 512 x 8 PROM in 10 seconds.
National Memory Applications Handbook AN-189 (23pp)

15 **"Fujitsu EPROMs: Designing in the Upward Compatible Pin Site"**
(MBM2716, 2732A, 2764, 27C64, 27128)
Describes system upgrading procedures for the company's line of 16 to 128 Kbit bytewide EPROMs. In-system programming, power considerations and SRAM/ROM compatibility are covered.
Fujitsu Microelectronics AN-004 (9pp)

16 **"Fujitsu EPROMs: Programming Erasing, and Data Retention"**
(MBM2716, 2732, 2732A, 2764, 27C64, 27128, 27C128)
Examines the programming, erasure, and data retention characteristics of the company's EPROMs.
Fujitsu Microelectronics AN-006 (8pp)

17 **"Fujitsu Registered PROMs Offer a New Tool for the Logic Designer"**
Gives details on a family of PROMs and their efficiency in providing the microcode instructions required by pipelined instruction sets.
Fujitsu AN-008 (5pp)

"Intel Memory Design Handbook"
See listing under (Memory) RAMs (Intel)

18 **"PROM Power Switching Alternatives"**
Describes circuits for external power switching of Tri-State bipolar PROMs to reduce average power requirements. Circuits directly interface active data bus.
National Semiconductor AN229 (6pp)

MEMORY

PROMs (cont)

1 **"PROM Power-Down Circuits"**
(DM74S287)
Describes several ways to power-down bipolar, three-state PROMs.
National AN-171 (4pp)

2 **"Programming 2732 PROMs with the CDP18S480 PROM Programmer"**
(CDP18S480)
Describes procedure for programming 2732 PROMs with the CDP18S480 PROM programmer.
RCA ICAN-6847 (4pp)

3 **"Programming Intel's 27256 EPROM"**
(27256)
Discusses programming characteristics of the 27256 32K byte EPROM.
Intel 1985 Memory Components Handbook AP-154 (5pp)

4 **"Understanding and Using the CDP18U42 EPROM"**
(CDP18U42)
Cover design and programming characteristics of a 256 x 8-bit nonvolatile, UV EPROM; includes discussions on programmer circuit options and device applications.
RCA ICAN-6925 (8pp)

RAMs

5 **"HM-6516: Low-Power Synchronous CMOS RAM"**
(HM-6516)
Introduces a 2Kx8 synchronous RAM using an advanced planar SAJI IV process and manufactured with a sub-2.5-micron single poly process.
Harris TB-54 (1pp)

6 **"Harris HM-6514 Compatibility with the 2114"**
(HM6514)
Compares the HM-6514 1024 word x 4-bit CMOS static RAM with the popular 2114.
Harris TB-10 (8pp)

7 **"Key Issues of Surface Mounted ICs"**
Complete details on standard types of surface mount ICs.
Texas Instruments SMFY002 (7pp)

8 **"Topological Structure of the TMS4161 Multiport Video RAM"**
(TMS4161)
Defining the internal architecture and function of a video RAM, this note gives information for a device's memory array and shift register to be properly tested to guarantee device adherence to application requirements.
Texas Instruments

9 **"1K CMOS RAMs"**
(MM54C920, MM54C921, MM74C920, MM74C921, MM54C929, MM74C929, MM54C930, MM74C930)
Presents considerations for designing with CMOS RAMs. Considers synch vs asynch memory, memory structure and timing, and characteristics of devices.
National Memory Applications Handbook (13pp)

RAMs (cont)

10 **"2001 Non-Volatile RAM Protects Critical System Data at Low Cost"**
(2001)
Discusses applications of NVRAMs and shows how to design the 2001 NVRAM into systems using the MC5-51 microcontroller on the iAPX188 microprocessor.
Intel 1985 Memory Components Handbook AP-176 (11pp)

11 **"256-Cycle Refresh Conversion"**
(TMS4164)
Presents illustrations that show how to convert a system to a design with maximum flexibility.
Texas Instruments

12 **"620x480 Resolution with the TMS4161"**
(TMS4161)
Illustrates the configuration of dual-port video DRAMs for a 640x480 graphics system.
Texas Instruments Supplement to MOS Memory Data Book 1984 (7pp)

13 **"64K Dynamic RAM Architecture"**
(TMS4164)
Includes discussion of performance, reliability and cost.
Texas Instruments DR-1

14 **"64K Dynamic RAM Refresh Analysis System Design Considerations"**
(TMS4164)
Presents refresh information and discusses compatibility with other DRAMs.
Texas Instruments DR-2

15 **"64K-256K Plastic Leaded Chip Carrier Compatibility"**
Illustrates the compatibility of 64K and 256K plastic leaded chip carriers through proper footprint layout.
Texas Instruments SMFA002 (3pp)

16 **"64k Dynamic RAM Memory Board with Transparent Refresh"**
(MCM4116, MC3242, MC3480)
Describes circuits for implementing hardware-refreshed 64k dynamic memory board for use with 6800 or 6809-based systems.
Motorola Semiconductor AN-835 (7pp)

17 **"A 256K DRAM Organized for Applications Solutions"**
(TMS4256)
This 256K DRAM primer outlines the possibilities inherent in moving from 64K to 256K chips, giving directions on how to best make the transition.
Texas Instruments SMQY001 (12pp)

18 **"A CMOS Keyboard Data Entry System for Bus Oriented Memory Systems"**
(MC14419)
Describes a keypad to binary data entry system for placing data in RAM memories. It allows data to be entered through keystrokes encoding 4-bits at a time.
Motorola Application Note AN-759 (4pp)

"A High Speed FIFO Memory Using the MECL MC10143 Register File"
See listing under (Digital) High Speed Logic (Motorola)

19 **"A Memory Design for an 8080A-Based Microprocessor System"**
(INS8080A, MM5290)
Describes a memory design for a system with up to 64 bytes of R/W memory in 16 kbyte increments. Provision is made for further address decoding (up to 1 megabyte). Includes schematics, timing diagrams.
National Memory Applications Handbook (8pp)

MEMORY

RAMs (cont)

1 **"A Method of Implementing Stacks with Existing Minicomputer Memory"**
Gives detailed description of a controller for a stack of programmable size up to 256 words for a 16-bit minicomputer with less than 16K of memory. Tells how stack size can be increased to 4096 words by adding ten ICs.
National AN-60 (4pp)

2 **"A Testing Philosophy for 16K Dynamic Memories"**
(MK4116)
Discusses test procedures that relate to the quality and reliability of memory chips, including characterization tests, reliability tests, and final test. Includes a comparison of available 16K dynamic RAMs.
Mostek 1982/83 Memory Designers Guide III-103 (12pp)

3 **"Addressing Considerations When Testing the MB8264 and MB8265 64K Dynamic RAMs"**
(MB8264, MC8265)
Testing a random acess memory requires a detailed description of the internal topology and address decoding of the device in order to properly run complex disturb patterns and to optimize testing procedures. This note provides this information for the MB8264 and MB8265 64K dynamic RAMs.
Fujitsu TB-001 (4pp)

4 **"Addressing Considerations When Testing the MK4116"**
(MK4116)
Describes the internal topology of the MK4116 16K dynamic RAM, and provides information for checking for worst-case patterns or for optimizing test sequences.
Mostek 1982/83 Memory Designers Guide III-83 (7pp)

5 **"An In-Depth Look at the MK4027"**
(MK4027)
Gives complete information on the MK4027 4K RAM, including process steps, internal operation, memory cycles and refresh.
Mostek 1982/873 Memory Designers Guide III-121 (13pp)

6 **"An Introduction to Cache Memory Systems and the TMS2150"**
(TMS2150)
Describes the use of cache memory architecture to enhance the throughput of many microprocessor systems. The technique allows large, low-cost memory to perform like high-speed RAM.
Texas Instruments SR-1 (8pp)

7 **"An Introduction to the TMS4256 and TMS4257"**
(TMS4256, 4257)
Gives details on the architecture of 256K dynamic RAM devices, discussing control signals, cycle types, modes, options, and enhancements.
Texas Instruments SMQA001 (9pp)

8 **"Applications of the Intel 2104A 4K RAM"**
(2104A)
Discusses operation of the device including power distribution and decoupling.
Intel Application Note AP-23 (13pp)

9 **"CEMOS I High-Performance 16K (4K x 4 Bit) Static RAMs"**
(IDT71681, IDT6168)
Offers application examples of the IDT71681/6168 static RAMs as microprogram, mapped, and cache memories, as local stacks for high-performance ALUs, and in video display controllers and digital filters.
Integrated Device Technology (12pp)

RAMs (cont)

10 **"CMOS MK3805 Provides Real Time Clock/Calendar to a Z80 Bus"**
(MK3805)
Describes the Mk3805 and its operation, including interface requirements and alternatives. A sample program is given.
Mostek 1982/83 Z80 Designers Guide V-105 (30pp)

11 **"Charge Pump Driver for 7001 RAMs"**
(SN54508)
Defines a method for driving the charge storage pump input of a 7001 RAM. Provides a description of the basic storage pump RAM cell and the charge pump circuit diagram. Gives performance curves.
Texas Instruments Application Report CA-178 (6pp)

12 **"Designing Memory Systems for Microprocessors Using the Intel 2164A and 2118 Dynamic RAMs"**
(2164A, 2118, 8203)
Describes microprocessor memory system design using Intel dynamic RAMs and the 8203 dynamic RAM controller. Includes logic schematics, timing diagrams and system design considerations.
Intel AP133 (38pp)

13 **"Designing Memory Systems with the Intel 2186 and 2187 iRAMS"**
(2186, 2187)
Discusses a new type of RAM, called the iRAM (integrated RAM), which combines the best features of the SRAM and DRAM, and eliminates the need for designing refresh control circuits.
Intel AP-132 (38pp)

14 **"Designing Minimum/Nonvolatile Memory Systems with CMOS Static RAMs"**
(CDP1800)
Details system considerations and circuit requirements for CDP-1800 series RAM operation and data retention in CDP1802-based systems. Discusses interfacing complexity vs memory size, power distribution, power-up/power-down control and battery selection.
RCA ICAN-6943 (25pp)

15 **"Designing the 2004 Non-Volatile RAM into Your System"**
(2004)
Discusses applications for NVRAMs and shows how to design the 2004 into systems using the MCS-51, iAPX86/88 or iAPX186/198 microprocessors.
Intel 1985 Memory Components Handbook AP-173 (17pp)

16 **"Designing with 16K and 64K Dynamic RAMs"**
(NMC4164, NMC5295)
Discusses design procedures using multiplexed-address, dynamic RAMs. Describes basic functions and RAM controller operation. Provides extensive electrical and timing diagrams.
National AN228 (16pp)

17 **"Designing with AMI's High Speed S2114H 1024x4 bit Static RAM"**
(S2114H)
Describes device and its use. Supplies block diagram, operating modes and timing diagrams.
American Microsystems (3pp)

18 **"Dual-Port Memory with High-Speed Serial Access"**
(TMS4161)
An introduction to a 64Kx1 dynamic RAM and its potential applications.
Texas Instruments Supplement to MOS Memory Data Book 1984 (8pp)

MEMORY

RAMs (cont)

1 **“Dynamic MOS RAMs”**
Discusses performance and design considerations of dynamic MOS RAMs, including multiplex timing considerations, page mode operation, and sense amplifier considerations.
Mostek 1982/83 Memory Designers Guide III-59 (6pp)

2 **“Dynamic Memory Refresh Considerations”**
(MCM6664A)
Discusses dynamic and static memory cell storage concepts, and the mechanics of refresh in dynamic RAMs.
Motorola AN-887

3 **“Dynamic RAM Board Design Made Easy”**
Discusses RAM chip characteristics, power supply and control signal distribution on PC boards, and control logic implementation. With schematics, PC layout.
National Memory Applications Handbook (9pp)

4 **“Guidelines for Designing Battery Backup Circuits for CMOS RAMs”**
Describes the various methods and interfaces for simplifying battery backed-up CMOS memory arrays. Includes a discussion of proper battery choice.
Harris Semiconductor AR-11 (7pp)

5 **“High Speed TTL Interfacing for 7001 Static RAMs”**
(SN75261, SN75365)
Illustrates interface techniques for driving the 7001 RAM chip-select input, and sensing the memory output.
Texas Instruments Application Report CA-179 (8pp)

6 **“High-Performance Memory Access with the TMS4161”**
(TMS4161)
Explains how the dual ports on a video RAM eliminate the bottleneck caused by display refresh overhead, and presents a method in which system timing generation supports the access of interleaved banks of display video RAMs.
Texas Instruments SMVA005 (3pp)

7 **“High-Speed Memory System Design Using 2147H”**
(2147H)
Describes the 2147H operation and discusses design criteria for high-speed memory systems.
Intel 1985 Memory Components Handbook AP-74 (21pp)

8 **“IDT7130 and IDT7132 Two-Port RAMs”**
(IDT7130, IDT7132)
Describes a family to dual-port RAMs with separate address, control, and data I/O.
Integrated Device Technology (12pp)

9 **“Improved Performance with the AM9124”**
(AM9124)
Discusses device advantages over the 2114, including power and dc parameters, and memory system design incorporating the device.
Advanced Micro Devices (6pp)

10 **“Intel 2164A 64K Dynamic RAM Device Description”**
Detailed description and operating analysis of the 2164A dynamic RAM.
Intel AP-131 (18pp)

11 **“Intel 2164A Dynamic RAM Device Description”**
(2164A)
Describes the design and operation of a new type of dynamic RAM featuring redundancy and single 5V operation.
Intel AP-131 (18pp)

RAMs (cont)

12 **“Intel Memory Design Handbook”**
(1103, 2107A, 2107B, 2416, 3207A, 3222, 3245, 5101, 5235, 5244)
Combines various RAM, ROM, PROM and CCD application notes plus information on support circuits.
Intel $5.00 (265pp)

13 **“Interfacing Static R/W Memories to the 8080A”**
(INS8080A)
Considers addressing techniques and memory interfacing for the 8080A family.
National Memory Applications Handbook (4pp)

14 **“Interfacing the 6800 Microprocessor to National MM74C910 Memory”**
(MC6800, MM74C910)
Outlines an area navigation system for aircraft using the devices.
National Memory Applications Handbook (2pp)

15 **“Interfacing to the Z6132 Intelligent Memory”**
(Z6132)
Discusses the features and operating modes of the Z6132 4K dynamic RAM, with interface example given for each of the company's microprocessors. Design requirements for interchanging the Z6132 with 2716/2732-type EPROMs are also given.
Zilog Microprocessor Applications Reference Book 4-3 (16pp)

16 **“Leakage and Continuity Test Considerations Using Fujitsu Microelectronics' Single Supply DRAMs”**
Explains the need for precautions against the electrostatic breakdown of a gate and describes the input protection circuitry included in a family of single-supply dynamic RAMs.
Fujitsu Microelectronics TB-003 (2pp)

17 **“MB8266A Nibble Mode”**
(MB8266A)
Explains nibble mode operation in dynamic RAMs and shows an application in a video display system.
Fujitsu Microelectronics TB-005 (4pp)

18 **“MK4801A/MK4802 for High Speed Applications”**
(MK4801A, MK4802)
Details the characteristics, operations and benefits of two NMOS static RAMs.
Mostek 1982/83 Memory Designers Guide IV-17 (13pp)

19 **“MOS Scratch Pad/Content Addressable Memory System”**
Describes a 64-bit Scratch Pad/Content Addressable Memory using MOS devices. Includes circuit diagrams and discusses circuit operations.
National MB-11 (2pp)

20 **“Memory Margining Byte-Wide NVRAMs”**
(NCR 52001, 52002, 52004)
Discusses margining and prediction of retention time for a family of byte-wide, nonvolatile RAMs.
NCR MD-212 (8pp)

21 **“Memory Margining Nibble-Wide NVRAMs”**
(NCR 52210, 52211, 52212)
Describes margining and predicting or retention time for a family of nibble-wide nonvolatile RAMs.
NCR MD-211 (8pp)

APP. NOTE DIRECTORY

RAMs (cont)

1 **"Memory Systems Characteristics and Applications for the CD4061A"**
(CD4061A)
Describes basic device operation, application in memory systems, and testing including construction of an all CMOS memory tester.
RCA ICAN-6445

2 **"Multiport Video RAM VS 32Kx8 DRAM Graphics Comparison"**
(TMS4161)
Compares two memory approaches for graphics systems with four color planes and 512x512 or 1024x1024 resolution. Considerations include parts count, board real estate, and refresh overhead.
Texas Instruments SVA001 (9pp)

3 **"NMOS RAM Offers Non-Volatility with DATASAVE"**
Explains how the Bytewide concept of RAM, ROM and EPROM interchange makes memory design more flexible, how it works, and how it can be integrated into a system.
Mostek 1982/83 Memory Designers Guide IV-7 (9pp)

4 **"Nonvolatile RAM Applications"**
(NCR52001, NCR52002, NCR52004, NCR52210, NCR52211, NCR52212)
Defines nonvolatile RAMs and gives a detailed technical description of the operation of 5V-only byte-wide and nibble-wide NVRAMs.
NCR Corp. MD-203 (5pp)

5 **"Optimized Testing of 16K RAMs"**
(MK4116)
Discusses the critical issues in 16K RAM testing, including test temperature, refresh testing, sense amplifier margin, and decoder and I/O testing.
Mostek 1982/83 Memory Designers Guide III-99 (4pp)

6 **"Printed Circuit Board Layouts for the Compatible Dynamic RAM Family"**
(MK4116, MK4332, MK4516, MK4528, MK4564)
Discusses techniques for memory board designs using these dynamic RAMs.
Mostek 1982/83 Memory Designers Guide III-17 (8pp)

7 **"Software Refresh Memory Board for an MC6809 System"**
(MCM4116, MCM4027, MCM6664)
Describes hardware and software for implementing a software-refreshed dynamic memory board for use with 6809-based systems.
Motorola Semiconductor AN-833 (5pp)

8 **"Software Refreshed Memory Card for the MC68000"**
(MC68000, MCM4116, MCM6664)
Describes hardware and software for implementing a software-refreshed, dynamic memory card using 16k or 64k RAMs for use in an 8-MHz MC68000 system.
Motorola Semiconductor AN-816 (6pp)

9 **"Static RAM Applications"**
(INS8900, MM5257)
Discusses memory support for a μP and power down for RAMs.
National Memory Applications Handbook (2pp)

10 **"TM4164EC4 Provides High-Density Memory Array "**
Describes a memory board using a single-chip DRAM controller and 64Kx4 memory modules. Schematics, edge connector pinout, and signal descriptions are included.
Texas Instruments SMA001 (7pp)

11 **"TMS4116 VS TMS4164 Data Sheet Differences"**
(TMS4116, TMS4164)

RAMs (cont)

12 **"TMS4164 Internal Topology"**
(TMS4164)
Discusses TMS4164 pinout, array organization, array bit map, and upper and lower array cell topology.
Texas Instruments DR-9

13 **"TMS4164 Printed Circuit Board Layout"**
(TMS4164)
Illustrates universal and p-c board layouts for the TMS4164.
Texas Instruments DR-6

14 **"TMS4164 and TMS4416 Interlock Clock"**
(TMS4164, TMS4416)
The TMS4164 and TMS4416 dynamic RAMs use a novel interlocked clock to yield enhanced immunity to process variations, temperature, and voltage-induced parametric changes. The interlocked clock structure provides a synchronous timing operation that eliminates race conditions. An overview of the memory control structure and its functions is included.
Texas Instruments SMDA015 (4pp)

15 **"TMS4164A and TMS4416 Input Diode Protection"**
(TMS4164A, TMS4416)
The TI 64K DRAM family provides the user with improved ESD protection and input clamping diodes for negative undershoot. This note discusses possible anomalous testing results if the inputs are driven to large negative voltages.
Texas Instruments DR12 (4pp)

16 **"TMS4256/TMS4257 Topology"**
(TMS4256, 4257)
The most critical test routines on dynamic RAMs require a thorough knowledge of the device topology.
Texas Instruments SMQA002A (5pp)

17 **"TMS4416 16Kx4 DRAM Device Structure"**
(TMS4416)
Describes pin configuration and 8x6 vs 7x7 addressing compatibility.
Texas Instruments DR-11

18 **"TMS4416 Internal Topology"**
(TMS4416, TMS4164)
Illustrates TMS4416 address bit significance, pinout, array organization, array bit map, and upper and lower array cell topology.
Texas Instruments DR-10

19 **"TMS4416/TMS4500A Evaluation Board"**
(TMS4416, TMS4500A)
Illustrates memory system implementation using the TMS4416/TMS4500A evaluation board. The board is populated with a TMS4500A DRAM controller and 16 TMS4416s. It allows construction of several processor systems without redesign of the memory section for each system.
Texas Instruments SMAA001 (6pp)

20 **"TMS4464 Topology"**
(TMS4464)
Presents the topology of the TMS4464.
Texas Instruments SMBA641 (8pp)

21 **"TTL Drivers for the TMS4416-15"**
(TMS4416-15, Z80, Z8000)
Some form of drive circuitry is needed when DRAMs are used with processors such as the Z80 or Z8000. This note discusses an efficient, cost-effective approach using TTL devices as drivers.
Texas Instruments SMBA013 (5pp)

MEMORY

RAMs (cont)

1 **"Test Implications of Higher Speed 16K RAMs"**
Deals with the problems of testing fast 16K RAMs.
Mostek 1982/83 Memory Designers Guide III-115 (6pp)

2 **"Testing Philosophy for the TMS4161"**
(TMS4161)
Describes operation of the TMS4161 multiport video RAM, tester requirements, test strategy, and suggested test approaches.
Texas Instruments SVA002 (4pp)

3 **"The 5-Volt, 64K Dynamic RAM is Here, So is The 32K, So is The 16K!!!"**
(MCM4516/17, MCM6664/65, MCM6634)
Provides diagrams and instructions for optimizing memory-board layout using three types of RAMs in an expandable system. Emphasizes planning of addressing at the card edge, and physical and logical row selection on the card.
Motorola AN-805 (5pp)

4 **"The Nonvolatile RAM for Microprocessor Applications"**
(M193, M120)
Compares cell structure and operation of EPROMs, EAROMs, and NVRAMs. Emphasizes NVRAM applications.
SGS-ATES DN317 (15pp)

5 **"Transparent Refresh Using SN74LS600AN and SN74LS601AN"**
(SN74LS600A, SN74LS601A)
Describes how dynamic RAM refresh can be accomplished without interrupting CPU cycle time.
Texas Instruments AR-SDLA001 (4pp)

6 **"Use of CMOS RAM CDP1824 with RCA Microprocessor Evaluation Kit 18S020"**
(CDP1824)
Describes the CDP1824 and its application in the CDP18S020 Evaluation Kit, and presents examples of how the CDP1824 can be combined with the CDP1831 ROM to form efficient ROM-RAM systems.
RCA ICAN-6537 (4pp)

7 **"Use of CMOS-SOS RAM CDP1822 with RCA Microprocessor Evaluation Kit CDP18S020"**
(CDP1822)
Describes the CDP1822, its operation, and its application in the CDP18S020 Evaluation Kit.
RCA ICAN-6539 (4pp)

8 **"Using 64 Kbit Dynamic RAMs with EF9365, EF9366, EF9367 Graphic Display Processor"**
(EF9365, EF9366, EF9367)
Explains the use of 64K x 1 and 16K x 4 dynamic RAM memory chips in designing a graphic display system built around the EF9365/6/7 processor circuits.
Thomson CSF Components NA-035A (22pp)

9 **"Using Dynamic RAMs"**
(MK4027, MK4116)
This note discusses the considerations in designing a memory system using the MK4027 or MK4116 via a demonstration memory board designed for the Digital Equipment Corp. LSI-11 microcomputer.
Mostek 1982/83 Memory Designers Guide III-65 (15pp)

10 **"Using Synchronous Static CMOS RAMs"**
A detailed study of the design techniques required for high performance, low power, CMOS RAM arrays. An example array design is presented, and interfacing to common microprocessors is discussed.
Harris Semiconductor AN-101

RAMs (cont)

11 **"Using Tri State® Logic for Rubber Band Memories"**
Describes the construction and use of scratch/pad memories to store data at a rapid rate and then release it as required. They serve as buffers between systems operating at different clock rates.
National AN-68 (4pp)

12 **"Video Memory: Technology and Applications"**
(TMS4161)
Discusses the evolution of unique memory architectures to deliver higher performance for graphics, describes the state of the art in dual-port video RAMs, and speculates about future memory chip developments.
Texas Instruments SMVY002 (9pp)

13 **"Which Way for 16K?"**
Considers various aspects of 16K RAMs including 64 and 128 cycle refresh and the advantages versus disadvantages of latching.
Intel Application Note AP-22 (7pp)

14 **"Z80 Interfacing Techniques for Dynamic RAM"**
(MK4027, MK4116)
Provides specific examples of methods for interfacing 16-pin dynamic memories to the Z80.
Mostek 1982/83 Memory Designers Guide III-43 (16pp)

15 **"Z8000 Memory Interfacing Techniques"**
(MK4564)
Gives a functional description of the MK4564, timing charts for refresh and Z8001 timing, and interface schematic.
Mostek 1982/83 Memory Designers Guide III-37 (5pp)

ROMs

16 **"Custom ROM Programming"**
Gives forms for submitting truth tables for various National read only memories.
National AN-100 (8pp)

17 **"Designing With Signetics MOS ROM Family"**
Lists the advantages of designing with a generic printout family of EPROM/ROMs. Describes data and specifications of major lines of MOS ROM.
Signetics (50pp)

18 **"Fast Multipliers Using TTL Read Only Memories"**
(SN74182, SN74H183, SN74283, SN74284, SN74285)
Reviews fundamental algorithm of binary multiplication. Shows use of ROMs for multiplication, two's complement multiplication, and truncated multiplications.
Texas Instruments Application Report CA-172 (11pp)

"Intel Memory Design Handbook"
See listing under (Memory) RAMs (Intel)

"MOS Goes Bipolar"
See listing under (Memory) Shift Registers (National)

19 **"Memory System Upgrade, 16K EPROM to 32K EPROM, and 32K EPROM to 32K ROM"**
(TMS2516, TMS2532, TMS4732)
Describes and illustrates system upgrades involving read mode only and those involving program modes.
Texas Instruments MM9403

MEMORY

ROMs (cont)

1 **"Monolithic Diode Matrices"**
Describes programming and use of diode matrices. Applications: teletypewriter coding matrix, decimal decode for displays, nines complement-BCD, shift register matrices, and ROMs.
Harris Semiconductor AN-206 (16pp)

2 **"Saving ROMs in High-Resolution Dot-Matrix Displays and Printers"**
(DM8596, MM8597)
Describes two-stage, column-generation approach called "intermediate coding" that saves more than 25% of ROM capacity when several ROMs are needed to store a font.
National AN-85 (8pp)

3 **"The Application of ROMs"**
(MM5203)
Describes applications of read only memories in table look up, code conversion and generation, character generation, random logic generation, and microprogramming.
National AN-61 (12pp)

4 **"Trig Function Generators"**
Instead of simply cascading ROM to increase resolution and accuracy of the look-up tables, this note describes interpolation techniques to increase trig function accuracy with less memory.
National MB-10 (12pp)

5 **"Use of CMOS ROMs CDP1831 and CDP1832 with the RCA Microprocessor Evaluation Kit CDP18S020"**
(CDP1831, CDP1832)
Describes the operation and design of CDP1831- and CDP1832-based read-only memory systems in the CDP18S020.
RCA ICAN-6536 (4pp)

ROMs (cont)

6 **"Use of CMOS ROMs CDP1833 and CDP1834 with the RCA Microprocessor Evaluation Kit CDP18S020 and the EK/Assembler-Editor Design Kit CDP18S024"**
(CDP1833, CDP1834)
Describes the application of the CDP1833 and CDP1834 in the CDP18S020 Evaluation Kit and the CDP18S024 EK/Assembler-Editor Kit.
RCA ICAN-6635 (4pp)

Shift Registers

7 **"A Random Pattern Generator for Testing Digital Delay Elements"**
Describes the use of a linear feedback shift register for digital testing.
Advanced Micro Devices (3pp)

"COS/MOS MSI Counter and Register Design and Applications"
See listing under (Digital) CMOS (RCA)

"The Logical Design of Shift Counters"
See listing under (Digital) Counters. (Motorola)

"Using Shift Registers as Pulse Delay Networks"
See listing under (Digital) High Speed Logic (Motorola) Microprocessors.

CUSTOM/SEMICUSTOM

Gate Arrays

1 **"A 1.2K CMOS Gate Array"**
Describes a 1.2K CMOS gate array fabricated on a 3-micron, dual-layer metal M²CMOS process.
National Semiconductor AN-332 (4pp)

2 **"A 2.4K CMOS Gate Array"**
Describes a 2.4K CMOS gate array and comments on the design considerations incorporated in its definition. Also evaluates the effects of simultaneous switching of outputs, with inductive parasitics considered.
National Semiconductor AN-320 (6pp)

3 **"A 2.4K M²CMOS Gate Array, System Design Facility"**
(SCX6324)
Describes a gate array (SCX6324) fabricated on a 3-micron, dual metal, N-well, 5-volt process that typically provides internal propagation delays of less than 2 ns. Includes details of the basic cell element, electrical performance, process highlights and software capabilities.
National Semiconductor AN-322 (4pp)

4 **"Analog Capabilities on Metal Gate CMOS Arrays"**
Describes semicustom CMOS gate arrays for monolithic digital and low-power, high-performance linear design combinations.
Interdesign APN-32 (7pp)

5 **"Binary Addition/Subtraction and Binary/BCD Addition Utilizing Motorola's MCA2500ECL Macrocell Array"**
(MCA2500ECL)
Binary adders/subtractors and binary/BCD adders of various bit lengths are implemented with an ECL semicustom macrocell array.
Motorola Semiconductor AN953 (16pp)

6 **"Designing Macrocell Arrays Using Engineering Work Stations"**
Gives an introduction to semicustom arrays and engineering work station interfaces to the company's CAD system.
Motorola AN928 (4pp)

7 **"Designing with an LSI Bipolar Configurable Gate Array"**
Describes the technology, topology and circuit operation of an LSI bipolar configurable gate array.
Raytheon Semiconductor AN28 (24pp)

8 **"ECL/ALS Gate Array Family Application Guide"**
(MCA600, MCA1200ECL, MCA2500ECL, MCA1500M, MCA500ALS, MCA1300ALS, MCA2800ALS)
Provides a guide to application of ECL/ALS gate arrays, including array topology, macrocell descriptions, performance and packaging considerations.
National Semiconductor (42pp)

9 **"FGC6000 Series Advanced Two-Micron CMOS Gate Array Family"**
(FGC6000)
Describes characteristics and applications of the FGC6000 gate array series.
Fairchild (3pp)

10 **"FGE2000 ECL Gate Array"**
(FGE2000)
Offers complete details on the FGE2000 gate arrays, which utilize a cell-based, two-level, series gated (cascode) ECL circuit structure. A CAD system is also discussed.
Fairchild (15pp)

Gate Arrays (cont)

11 **"FTDL Example Programs for D.C., Function, and Delay Tests"**
Timing charts, timing diagrams, and program listings are given for testing a sample circuit of 4-bit parallel-access shift registers implemented with gate arrays.
